"Desperately Seeking Good News for Radio Industry"

"Neither of these suggestions are easy to do. But if action isn't taken to at least try, six months from know you're going to have an even tougher road."

http://www.audiographics.com/agd/021907-1.htm

"Radio in the United States"

"FM radio, aided by the invention of ever smaller portable radios and inexpensive "Walkman" headsets, dominates music programs, while AM has shifted to "talk" and news formats. Barely in existence 25 years ago, "talk radio," in which celebrities and experts from various fields answer listener "call-in" questions and offer their advice on various topics, has grown spectacularly in recent years. It has contributed to the comeback of AM radio."

http://en.wikipedia.org/wiki/Radio_in_the_United_States

Again, just a full-of-shit IBOC shill.

> the comeback of AM radio."

That, of course, is a crock.

The fact is that talk formats are starting to migrate to FM, as witnessed by the list I have posted several times.

AM talk formats existed all the way back in the 60's with hosts like Joe Pyne and Bill Ballance. KABC in LA was #1 throughout the 70's with a news and talk format, to give one example.

What restricted the growth of the format was both the lack of talent at the local level and the Fairness Doctrine. When the deregulation of radio under Reagan eliminated Fairness and did not require opposing viewpoints to be granted equal time, talents like Rush Limbaugh developed and went national via syndication.

AM shares, however, have declined every year since the late 60's when the FCC mandated the end of AM/FM simulcasts. In 1977, the national FM share passed the AM share, and now FM commands about 80% of all listening (each market is a little different... some are less, like San Francisco, and others are more, like Allentown).

Today, per Arbitron, AM shares below age 45 are in the single digits (that's the sum of all AM stations in each market) and the bulk of AM listeners are over 55... which in the rated markets means you can not sell this audience segment.

There is no comeback of AM radio. AM shares, in Arbitron, are at the lowest level ever. And the audience is ageing every year.

Since at least the last couple of weeks ago,most of the main most important news has been (and still is being,in my opinion) nutered by the U.S.Ministry of Propaganda

Look at what's rolling around the mainstream news sites and on tv and a lot of talk radio shows nowdays.Anna Nicole Smith this and that,,,, Britney Spears this and that.Anna Nicole Smith screwed up by messing around with drugs and overdosed and killed herself.Britney Spears is so confused nowdays,she doesn't know which way to turn.Her stupid mom ought to be locked up for pushing Britney into acting and s..t at such a young age.

Britney should consider (in my opinion) going home and becoming and adult and raise her kids,instead of running around with the likes of that no d..n good Paris Hilton mutt and those other freaks and queers and jetsetting all over the World.I am an alcoholic too.

Dear Sir,

There is no "trick" to identifying a shortwave station in the sense you mean. There is ONLY experience, a few good references, and careful listening. I haven't stated it yet on this thread (but those who know me well from my other postings know what's coming next!) - if you want to get the most from the shortwave hobby, while internet sites are invaluable, the two books PASSPORT TO WORLD BAND RADIO and WORLD RADIO TV HANDBOOK are essential. Both are available inexpensively from Amazon, as well as local bookstores. Many of the better mail-order radio dealers also sell them. These books are published yearly. I buy each new edition as it is published. These books, which do not really overlap but rather complement each other, make the hobby far more enjoyable. Trying to listen to shortwave without these books is, in my opinion, just like a lawyer trying to get by without the Law Review, a doctor trying to get by without the PDR, or an engineer trying to get by without the CRC Handbook.

These books will explain to you just how shortwave signals travel around the world. In addition, they will give you an excellent overview of the hobby and will answer the great majority of your questions..

I hope you don't think I'm being supercilious or condescending to you. That is certainly not my intention. I sincerely want to encourage you (and anyone else interested) in the shortwave hobby. Like any other worthwhile hobby, there are things that must be learned. One cannot actually learn until one has the proper tools, in this case a shortwave receiver of good quality. Once you actually get the radio, carefully study the instruction manual, and, I hope, buy and study the references I mention as well as studying some online informational sites (especially RadioIntel.com and PrimeTimeShortwave.com), then you'll be well on your way to becoming a DXer. Plus you'll be able to avail yourself of a great deal of news and commentary from very

different perspectives than is available on our local "mass media," as well as some great and exotic entertainment.

I'll say it once more: there's no substitute for experience and there's no way to get that experience except by putting in the time and effort necessary. That is the "trick" to identifying stations and for shortwave listening in general.

But first you need to buy the radio. All else will follow.

Best,

Joe

WA7ZYQ - OK - IS IT A DIPOLE ?
WHAT MAKES IT A DIPOLE -OR- INVERTED "V" ANTENNA ?
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/12303

RE-READ # 2 - Standard PL-259 UHF-Type Coaxial
Connector (2-Pack) - RadioShack Catalog #: 278-205
http://www.radioshack.com/product/index.jsp?productId=2103402
The Twin Five-Wire Multi-Elements-Antenna-Arms ended in
PL-259 Plugs with all Five Wires Soldered to the Center
Connector of the Plug for one-side and the other-side had
all Five Wires Soldered to the Outer Housing of the Plug.
Effectively wiring them through the T-Adapter as a Dipole.

IF - You 'wire' the one PL-259 Plug {Right-Side} with
the 5-Wires soldered to the Center Pin.

AND - You 'wire' the other PL-259 Plug {Left-Side} with
the 5-Wires soldered to the Outer {Shield} Housing.

AND - You use the T-Adapter with a Coax Cable feed-in-line.

THEN - You have 'wired' the Antenna Elements as a "Dipole".

NOTE - A Multi-Element "Dipole" Antenna with each of the
Five Sets {Pairs} of Inverted "V" Arms 'cut' {1/4 WL-5%}
to a specific Shortwave Band 60M, 49M, 41M, 31M and 25M.

hope that this clarifies the 'dipole' issue - iane ~ RHF {pomkia}

We are talking about a convention program that botched my title, not about anything I personally did. As I said, this sort of thing is very common. The same program had our Director of Engineering listed as "Chief Engineer" instead. The real issue is that this is one isolated error by the NAB, and did not bother any of the roughly 3,000 people at the panel.

In other words, you did not know next-to-the-last surname is the paternal
surname and the one used when only one is employed. In any case, SantaCruz
is a single surname, despite the capitalization.

As I said, for a DXer not to know this seems bizarre.

I've been working since 4 AM, which is about 15 hours more than you worked
today.

It appears, Mr. Gleason, that you are suffering from either alcohol abuse, drug abuse or have severe mental health issues.

I suggest that you contact Univision's Human Resources Department to arrange a treatment program.

Even though you are of advanced age, treatment can still be of benefit to you.

DE - You used the acronym "NARBA" which was
something that did not cause me to think of the
"North American Radio Broadcasting Agreement"
After all I am only a Radio Listener and not in the
Broadcast Radio Business like you.

Again I will repeat myself by posting :

North American Radio Broadcasting Agreement -Cirica 1941-
http://en.wikipedia.org/wiki/North_American_Radio_Broadcasting_Agreement

NARBA "Clear Channel" AM/MW Radio Stations
http://en.wikipedia.org/wiki/Clear_channel

BIG USA, Mexico, and Canadian AM/MW Radio Stations
-compiled by- AC6V => http://www.ac6v.com/clearam.htm

MAP - Night-Time AM/MW 50 KW Powerhouses in the USA
http://www.fortunecity.com/tinpan/bluenote/706/namrp/amradio.htm

And the 'point' being . . . that back in 1941 AM Radio was "King".

those were the days of great coast-to-coast am radio ~ RHF
.
.
. .

Yes, that was because there was no TV. There was only light usage of radio in the daytime as most people had only one household radio, in the living room. Portables and even car radios were not a factor.

Since the 50's, following the lift of the TV Freeze, the night listening to radio has been much lower. Daytime listening became the key to radio stations.

Today, 7 PM-Midnight listening is less than a third the level in morning drive, mid-days or afternoons. Nearly no revenue is generated in the evening, either.

So, with less than 1000 stations in 1941, listeners often had to listen to distant signals at night to hear their favorite network programs. Today, with 14,000 stations, few are far from a broad choice of signals. And the comedies and drama shows are on TV, not rado. So nighttime distant reception by the average listener has no benefit other than curiosity.

Dave
Thanks for the history. The turret looks very much like a bigger copy
of the TV tuner turrets from the late 40s and early 50s. It's a good
idea but too expensive. I guess the emblem was glued with some pretty
sorry adhesive as I can't see any residue from where it should have
been. If it was poor adhesive and they were falling off there should
be a spare or two around. Wish I could find one.

Why is that? The 55+ age group has more disposable income.

I have been following your exchange with DxAce and this guy you
responded to and I must say that more you post the worse you look. This
type of response sounds like total BS.

You used to have some credibility with me but not any more after reading
this thread.

You see I don't just discount what someone states because I don't like
it and make no mistake I generally do not like the viewpoint of what you
post.

I'm not interest in your ego but news and information that you posses
and decide to share on Usenet.

They get their information from somewhere. They don't emerge from their mother's wombs knowing who will present on which topic, or what so-and-so's job title is.

So now it appears you not only lied about your own job title but you also lied about a colleague's in order to promote your own political ends. Pathetic.

Probably they get the title from someone who recommends a person for a
panel. In the case of the "Programming Superstars" panel I was on, they got
the names from the COO or CEO of each of America's major broadcast
companies.

That is pretty funny. The engineering seminars and panels are scheduled by
an entirely separate group, made up of other engineers.

Fine. And why would someone recommending you think that you were the
President of Programming?

And of course there's no way that you could at some point have
actually exchanged words with someone in "an entirely separate group".
I mean, surely that sort of thing just never happens.

>
> Why is that? The 55+ age group has more disposable income.

In the larger markets...

(Sidebar... 30% of all radio ad revenue is generated in just the first 10 markets)

... most advertising is what is called "transactional" and placed by agencies on behalf of agency clients. Transactional means that the buy is based on the cost of delivery of some measure of listenership, like the amount you pay to reach every 1000 listeners.

Ad agencies are given orders by the clients as to who they consider the best potential consumers. The agency creates advertising directed at that group, and then places ad buys based on cost /delivery to reach them.

In the simplest terms, advertisers don't go after anyone over 55. This has nothing to do with the wealth or lack of same of that market segment. It has to do with how many ads it takes to change a buying behaviour. Older consumers take more convincing... thus, more ads... to make a sale. In many cases, an ROI (Return on Investment) analysis shows advertising to older consumers causes a loss with every sale.

Lots of people drink beer... but most beer ads are directed at 21 to 39 year old males, because that is where the money is. The ROI on advertising to other groups is low or not profitable.

As an example, in LA last year... and LA is the biggest revenue radio ad market... there were no buys by agencies against 55+.

So, that is the problem with AM. 80% of its listening is by listeners over 45, and much of that is by people over 55... an audience nobody really wants in the larger, rated markets. In smaller markets, or suburban situations, local direct advertisers will be more flexible... but for the bulk of US radio advertising, 55+ is not desirable.

What BS is there in refuting the lies about AM rates, billing and ratings
with actual facts?

In addtion, the "reject" posted a list of supoposedly major 50 kw Am
stations as part of his argument on thier success and high rates... I spoke
with the managers of two of those stations who found it intersting that
there is a perception that AM is generally healthy wen it is not.
>
> You used to have some credibility with me but not any more after reading
> this thread.

So the truth about AM, with documented data (Arbitron, BIA, Miller Kaplan,
etc) is not credible. If I said that AM was healthy and growing, would you
have liked it better? Unfortunately, that is just not true.
>
> You see I don't just discount what someone states because I don't like

I am discounting "reject" because he has his facts totally wrong.
>
> I'm not interest in your ego but news and information that you posses
> and decide to share on Usenet.

And that is what I posted... yet Mr. Reject keeps posting lies about AM that he can neither document nor provide sources for his claims.... his limit is to present a list of 50 kw stations, some of which are absolute dogs... as if their existence proves that AM is "getting better every day."

I almost never pay any attention to any of the AM/FM radios in the regular local yokel stores around here because I know most of them are cheap plastic crap.I suppose the Hooper Sound store on Terry Road at Mart 51 can order any kind of real good radio I want,no doubt there are at least one or two other stores around here that sell better quality radios too.So far though,IBOC is not taking over the radio listerners market in this here Jackson,Mississippi area.

The frequency is alive and well. It is 1140 on the dial. The format
changed to religious broadcasting a few years back along with a name
change to CHRB

CFCN has had a name change to CKMX

The above are both Calgary area stations.

The CBC outlet, CBR has recently began simultaneous FM broadcasts.

These broadcasts have nothing to do with freedom of religion.
They are scam artists milking the tax-free status of "churches".
Tax the churches and these confidence racketeers would disappear.

I had a 7600GR for a few days. I never intended to keep it, just evaluate it. It's a very good portable. If it had a tuning knob (like the 2010), I might have actually kept it.

4161. Dipole Antenna {Doublet Aerial} make from Power "Zip Cord" or Speaker Wire and . . . More 'About' the Doublet Antenna

YODAR,

Yes using common twin-wire Power "Zip Cord" or Speaker Wire
"Dipole" Antenna {Doublet Aerial} is very simple to make
and easy to rig. A 50-100 Foot piece of this Paired Wire
Bundle can be transformer into a very basic Shortwave
Listening (SWL) Antenna which is 'balance' and requires
NO Ground.

Dipole Antenna {Doublet Aerial} make from Power "Zip Cord"
or Speaker Wire and . . . More 'About' the Doublet Antenna.

Continental 1666 diverting to Miami IAP: 6640 kHz USB
``````````````````````````````````````````````````````

It is Wed, 3:51am EST (0851z).
"Continental 1666" is up on 6640 kHz USB with ARINC-New York in a
phone patch to their dispatcher and then MedLink. They are discussing
a 48-year-old male passenger who is having a heart attack. They are
diverting to Miami IAP. Paramedics will meet the plane; and the
airline is making arrangements for the passengers aboard the flight.

Allan:

A bit new with this.

Is this 6640 USB freq. devoted to Continental, or is it an ARINC freq that
any of the airlines can use ?

I've been trying to find an up to date listing for company airline freq's
for some time, but all the ones I have are,
for the most part, quite old, and apparently out of date. Might you know of
any ?

How about Arinc freq's for the NY/Boston areas that are in frequent use
(both USB or just regular AM)?
BTW: Are these "always" USB ?

Thanks,
Bob

I'm sure someone will come up with an exception, but all SSB traffic except for ham radio is USB. Many modern commercial radios don't even have LSB as an option.

Ham radio is LSB on 160m, 80/75, and 40m, USB on all other bands. The old saying LSB below 10mHz, USB above is no longer true, the 60m band (U.S. only?) is USB only (no CW/LSB/AM/FM/digital).

But USB can be used on 160, 80/75 and 40 can't it? And LSB can be used if desired on the other bands as well, correct? (except for 60 meters of course).

4168. NHK Shutting Down English Service

Newsgroup: rec.radio.shortwave
Date: 2007-02-21 13:37:01 UTC
From: "tom k in L.A." <tomask2@gmail.com>
Message-ID: <1172065021.816910.157090@v45g2000cwv.googlegroups.com>
Source record: 106167

Thank you very much for tuning into Radio Japan.

NHK faces demands to foster greater understanding of Japan by expanding
the content and reach of the television component of its international
broadcasts. The international radio service has therefore been subject to
a review, in accordance with the three-year NHK Corporate Plan unveiled in
January this year, which attaches greater importance to international
television.

With the development of a diverse range of broadcasting and
telecommunications technologies, major international broadcasters around
the world have scaled down their shortwave services, and shifted their
attention to the likes of wider-reaching TV services. A vast amount of
money would also be required to replace ageing transmitter facilities.
The NHK receiving fees paid by the Japanese public must be put to more
efficient use at a time when NHK faces financial difficulties, an issue of
which you are undoubtedly aware. We have ultimately had to review the
shortwave transmissions of Radio Japan, and make a number of tough
decisions.
Radio Japan plans to end its shortwave services to North America, Hawaii,
and Europe (excluding the Russian-language service).
Radio Japan also plans to end its Malay, Italian, German, and
Swedish-language services.

These changes are due to take place in October 2007. Until then, we hope,
of course, that you will continue to enjoy listening to Radio Japan.

Regrettably, we cannot fully express our gratitude for all of the
encouragement and support you have provided to Radio Japan over the years.
We trust you will understand the painful decisions we have been forced to
make, and continue to show an interest in NHK.

We look forward to your continued support of NHK World.

Regards,
NHK World

The war is illegal and it is the soldiers' sworn duty to refuse to
fight for insane plots for world domination. I DO NOT support the
troops.

Please cite the government documents that say the war is illegal.

And please, use your own words rather than some dumbass Liberal website.

E mail to Carlos F. Cifuentes [fabriciocifuentes7@hotmail.com] and ask him
who owned the station he workd for in the 60's. Fabricio is a TV personality
in Atlanta now, and was a Radio Musical DJ for many years in the 60's and
70's.

Sure, but the likelyhood of anyone answering your CQ is pretty small.

Geoff.

I personally doubt that you were tossed at gunpoint!

I do believe that you were probably doing something they didn't like.

Actually, when I was at CBS, the GM had the AOL Radio boards up on a machine in the conference room, so staff could receive and respond to questions from listeners in a public forum. He cruised all the radio boards and some newsgroups every day, as a manner of getting street level input. This went on for more than a year.

It was a good idea in theory but wasn't very effective as a tool because the boards quickly became overrun by sockpuppets for a handful of gripers, a few of whom were staff at the competition. And there was a lot of the usual flame war bickering.

But what came out of the experiment, especially early on, was a clear object lesson to the staff at how little the most vocal listeners really knew or understood how the radio business worked. And how little they cared about knowing.

So, it's not inconceivable that he may, indeed, have it up on a machine in house.

And it's likely that some of his associates are participating.

You've got to be kidding. Edweenie is a fraud, and it's highly unlikely that he was putting up for display the little conversation we were having.

I have a great deal of respect for you, Pete, but you're really making me laugh with this one.

And you may be right. But, I have seen it done. And I've seen it done
at at least one station in Chicago.

Don't forget another participant in this newsgroup who used the flame
wars he started on RRS for his classroom. As well, he put them up in
edited form on an anti-nazi website, one that was quoted in a Peter
Jennings story on ABC News.

> I have a great deal of respect for you, Pete, but you're really making me laugh with
> this one.

Well, damn, Steve. Normally I have to be naked before I get laughs
like that.

You are, however--you'll be very glad to hear, not my type. :)

As long as I've got you here, let me ask you a question.

Being the Drake afficionado you are, what kind of experience have you
had with long term performance changes in your rigs? Component drift.
Heat related issues. Alignment stability. Things like that.

You've said you've had your rigs serviced by Drake....is that for any
specific failure, or is it just general maintenance?

The reason I ask is I'm looking at an R-8, and thinking about
stability and reliability matters.

Any input?

4193. Station ID help: 17660 1445Z

I just put up a nice new inverted L and am hearing all sorts of new things, but I wonder if one of you can help me with this.

Listening with an Icom R75, Los Angeles area, picked up a fluttery signal on 17660 at about 1445Z, woman announcer in slow French (didn't sound like a native speaker) with music that slowly faded by 1455Z, couldn't get an ID.

EiBi IDs this frequency at this time as "GAB African Music", which isn't much help. Anyone have any ideas?

The R8 series seems to hold up quite well, other than the issue the R8B (and perhaps the R8A) has with the rotary encoder used in the tuning mechanism.

I've never yet had to send in an R8 series for alignment per se though I did send my R8 to Chuck Rippel for a passband tuning adjustment, I believe it was a number of years ago.

>
>
> You've said you've had your rigs serviced by Drake....is that for any
> specific failure, or is it just general maintenance?

Drake has/did service one of my R7's in the past and that was due to heat related issues in the power supply. If I recall correctly a few diodes went. The only other *big* issue to watch out for I think with the R7 is a failure of the on-off switch which is prone to failure and is a hard item I understand to find. It of course is a dual control being both

an on-off switch and RF gain control.

My current R7 was aligned by Jeff Covelli, WA8SAJ, in November 2005. Good service.

> The reason I ask is I'm looking at an R-8, and thinking about
> stability and reliability matters.

Stability always seems to be good with the R8 series as does overall reliability IMHO.

Actually, you were instrumental in running that one off. A certain
"professor" who took it upon himself to create chaos where there was none.

Mee see see pee pee eye doesn't have any Radio stations that play good old Polka Music.But,howsomever,I remember back in the 1940's/1950's there was at least one Radio station that used to play a Polka Music song or tree once in a while.I love that old Polka Music.What's I gotta do? Look up some Polka Music on the enterhernet and then step over to the Be Bop music store across Highway 80 from me and get that dudette woman over there to order some Polka Music on CDs for me?

Not only is the contnt on boards interesting, it comes at times from so far
in left field that it forces a person actually in radio to verify their
thinking. I have actually changed my perspectives on a number of areas,
based on having "we have always done it this way" theories questioned or
even destroyed by active listeners on boards.

Not only is that often the case, but it forces one to research data to rebut
an argument. At no time have I become so aware of the problems facing AM as
afer looking at a dozen or so major markets in Arbitron over the last decade
to document a point. Normally, I would have simply had an "impression"
based on experience, but not real hard facts... which were far worse than my
impression.

And that teaches everyone that the random request or comment or complaint
has to be taken in the context of the entirity of a station's listenership.
>
> So, it's not inconceivable that he may, indeed, have it up on a machine
> in house.

I had it on a big screen last night in Houston at a hotel where we were
going to do a research project later in the day; I used it as an example of
the "reliabilty" of a single listener's opinion vs. that of the universe of
listeners.
>

> And it's likely that some of his associates are participating.

Nearly my entire research staff was there. It was very educational in that it showed that single opinions can cover a very great range from one side of an issue to another, but the vast majority, around 90%, are concentrated in a very narrow and relatively similar range. Knowing how to distinguish the fringe from the core is one of the essential skills of a radio programmer or manager.

Separating wheat from the chaff is an old concept, often forgotten. The internet is a great leveler, but does not make a distinction between the well reasoned and documented and the blindly opinionated.

Yes, please show reasonable, logical proof that the war is not legal.
Please define your terms also; by "war" do you mean a formal
declaration? What powers do the leaders of the US and Canada have
given to them by their respective constitutions?

A wise person respects the efforts of the Armed Forces, a fool does
not understand. See below for my proof.

Despite their rhetoric, many in government do not really support the
troops. Liberals traditionally have great disdain for the military.
But it is actually a western cultural "tradition" to look down upon
the soldiers. We a scum and cannon fodder, worthy only to do the
bidding of the elites for a season, then be cast aside when we are no
longer useful.

Everyone should take a look at this website (posted below) about a
Rudyard Kipling poem named "Tommy". The poems tells of the public
respect and honor for the soldier, when the public wants his service
from him. After the soldier is used, then the people have no use for

him. Read the commentary after the poem, particularly this one from a sailor:

"TO WHOM EVER,

I've come to the stark realization, that even our country is guilty of this.
We aren't treated well unless the cowardly populations are afraid.

R.P.Balfour
U.S.N. (ret.)

I was in the service for 22 years, and I came out with considerable disability. POEM: http://www.cs.rice.edu/~ssiyer/minstrels/poems/43.html

> > why are there nothing but religious freaks on right now?

This is really becoming a sad situation. It's NOT that the religious types are broadcasting; as others have said, everybody has a right to say their piece, even if it is nonsense or a scam huckstering. The problem is that these types used to be immersed in a good number of competing signals of all sorts of political views from a wide range of different countries or entertainment and information from well-run broadcasting entities. Now just about all these other signals have disappeared.

I still listen to SW every day. But the choices I grew up enjoying are mostly gone. If it wasn't for Radio Netherlands, R. Australia, CRI, and Taiwan, there'd be practically nothing. We can get a few hours of BBC from their African and other services, if propagation allows, but lately I've been trying to scan the bands and get only the religious programs in English. I suspect that most of the other-language signals I hear are also religious.

I have been wanting to give a good SW radio to a friend of mine who has expressed an interest in SW. But I now hesitate because I cannot tell him much about what he might enjoy hearing.

Personally, I don't listen much during "prime evening hours" here in the US; there's usually enough on TV that those times are eaten up (though sometimes I'll have RN on at the same time as early-evening TV). I listen in the early morning and late night. Are there still a wide-enough range of international broadcasters on in the 0000-0400 UT timeframe that a decent SW portable on the whip alone will get enjoyable signals with worthwhile listening? My friend doesn't watch TV, so if he listens then, would he get enough out of the radio to make it interesting? However, he spends his time on other activities, and probably won't sit around and listen for hours.

That latter also mitigates against trying to get new listeners into SW. Everybody already has more than enough to fill their time.

The business news about this has concentrated on the
requirement for FCC approval and I've seen nothing
about the technical aspects or details. Has anyone?

The two different satellite-radio systems have differing
technical specs, using different digital decoding and
frequency ranges. How can these be "merged"? Wouldn't
they have to abandon one set of satellites and go with
the other alone? Or could there be dual-technology
receivers that "hide" the different transmissions from
the users and present them with a menu of the whole
range of signals from both sources as if they were one?
Has anyone yet built such a device?

By the way, why does no one ever speak of "hacking"
satellite radio in order to get the signals without
paying the monthly fee? There's all sorts of such
illegal activity for satellite TV and every now and then
you read of the countermeasures used by the sat-TV
companies and busts of suppliers of illegal decoder
equipment, but I've never seen anything about the same
activity regarding XM or Sirius. Is it impossible or
is it just that nobody cares enough to do it?

And undoubtedly once that happens IF it happens, we can expect more
commercials on their
service. Notice they're sneaking them in certain channels lately on
XM? Why more commercials? Hey, more money and every big corporation
loves more money, right?

I'll have to agree with the gentleman who commented on free music.
XM's beginning to blow, HD radio is a joke. What else to do?

I thought the quiet bands were due to the low sunspot cycle, but I just changed antennas and found there's still a ton of stuff to hear. The variety surprised me.

For the first time in months I can hear R. Sweden, R. Portugal, RNZI, R. Veritas, AIR...nothing super rare yet but lots more than just the main powerhouses.

I miss some of my old favorites like R. Denmark and Tahiti but there's enough to keep me busy for now.

> they have to abandon one set of satellites and go with
> the other alone?

I have not seen the details but I assumed they would continue to operate
their networks as long as they had customers who wanted them. What would
merge was the back end, the programs, and the business offices.

In the end there would be only one network with two delivery systems.
Similar to broadcast television today. Low defintion TV broadcast over
one channel and high def, but the same programs over another.

Eventually they would decide on one technology. It might be one of the
two they use, or it may be a newer technology that was not available
when the current ones were launched.

There are several ways of dealing with getting rid of the hardware
they no longer wish to support, from simply discontinuing service, to offering
free service or a discount to upgraders, (trade in your old receiver and
get a year's free servivce or $50 off). They may at various times do different
deals.

Eventualy they will just drop the one they won't support.

> is it just that nobody cares enough to do it?

No one has advertised it. I'm not really sure it's worth it. The
companies are too small in scope and customer base to make it worth
doing for money. People who want to hear the programs just download them
via the Internet (often illegaly).

Besides the handfull of talk radio shows that are exclusive to the networks, is there anything really worth bothering? There are lots of other sources for the music.

Geoff.

This would be the African nation of Gabon, quite possibly in French.
However, Gabon also shows up (as Afrique No. 1) at the same time, in
French, on 17630 kHz. It ruotionely puts in a moderate to strong
signal here in California. Could one of these be what you were
hearing? Does AN1 broadcast on two nearly adjacent freqs at the same
time?

I think 17760 is some kind of jammer, out of Gabon of course.

Yeah, a long time, in the early nineties I suspect. I was just being
nostalgic. I saw it in my old log book and started thinking about it.

I use the interval signal of R. Denmark as my cell phone ringtone.

It was definitely on 17660; propagation was very poor but the French
announcing was intelligible until the signal faded. I don't recall
hearing a strong parallel signal on 17630 but I'll check again tomorrow
and see whether I can hear an ID.

Thanks for the response.

I think you may be right. Here is something from Tony Snow at BDXC:

THE MOYABI STORY
Compiled by Tony Rogers - for British DX Club journal Communication
(Excerpt:)

February 2006: The Libyan opposition Sawt al-Amal (Voice of Hope) can
now be heard at 1200-1400 in the range 17660 to 17780 kHz (Observer
reports it is from Moldova with 250 kW). Sawt al-Amal is now

accompanied by three or more other signals in the same frequency range, presumably being used as jammers: One, which identifies as Libyan Radio (ID "idhaat al jamaheriya til ozma") carries a lot of Arabic music; this signs on just before 1200 with transmitter tones similar to those used by transmitters in the CIS.

A second station, usually heard from 1215-1530 UTC on or around 17670-80 kHz, carries continuous West African and French music. Observations indicate that this may be coming from one of Africa No 1's high-power transmitters at Moyabi, Gabon. There are also bubble-jammers and other forms of interference, such as continuous carriers or non-stop Arabic music. Check 17660 to 17680 kHz from 1200-1500 UTC.

Sawt al-Amal previously broadcast via satellite with a UK licence. It is probably linked to the former CIA-backed station Voice of the Libyan People which broadcast during the 1980s.

The behaviour of one shortwave transmitter at Moyabi in February 2006:
0700-1030 Africa No 1 on 17630
1030-1100 Radio Japan in Italian/Swedish on 21820
1100-1130 Africa No 1 on 17630
1130-1530 Franco-African type music on 17670/75/80
1530-1600 Africa No 1 on 17630
1600-1900 Africa No 1 on 15475

Africa No 1's absence from 17630 at any time between 1130 and 1530 seems to be accounted for by the appearance of the non-stop Franco-African type music shadowing the Libyan opposition station Sawt al-Amal on 17670/75/80 until it signs off at 1400, with the music then remaining on air until 1530 when the transmitter switches back to 17630 with Africa No 1 programming. (TR, BDXC e-mail news 19 February); a second transmitter originating from Moyabi was seemingly added for the music service, leaving Africa No 1's service on 17630 kHz uninterrupted.

For the latest schedule from Moyabi, please refer to the Africa on Shortwave document on the BDXC web site - www.bdxc.org.uk - Articles Index.

I haven't been on HF since 1991? or so. I toy with the idea of getting on again
but it doesn't interest me much. I'm more interested in SW DX.

Who knows, I spoke with Universal earlier today about the ICOM Pro III.

Here is some additional Feb 2007 detail from BDXC website, further
supporting DxAce's assertion. It strikes me as odd that the frequency
used would be so close to that used simultaneously by the major

broadcaster in Gabon, possibly even the same wavelength. I assume that, in the event the opposition station were to be operating on a very close channel to AN1, this 17660 jammer would probably desist - or maybe this close juxtaposition never happens.

AFRICA NO. 1
Africa No 1 is a commercial service for French-speaking Africa operating from studios in Libreville. Web: www.africa1.com Email: africa@africa1.com
Transmitter Site: Moyabi-Moanda - 500 kW (HFCC registrations state 250 kW).
Times/UTC Days Language Target Frequencies/kHz
0500-0700 Daily French Africa 9580
0700-1030 Daily French Africa 9580 17630
1030-1100 Daily French Africa 9580
1100-1600 Daily French Africa 9580 17630
1600-1900 Daily French Africa 9580 15475
1900-2300 Daily French Africa 9580
Note: the transmitter on 17630 kHz switches to 21820 kHz between 1030-1100 for the Radio Japan relay in Italian and Swedish. Between 1130-1530, the transmitter on 17630 kHz may be switched for use by the "African Music Station" (see below). Africa No 1 also reported on 19160 kHz, the second harmonic of 9580 kHz.

AFRICAN MUSIC STATION
Transmitter Site: believed to be Moyabi, Gabon.
Times/UTC Days Format Target Frequencies/kHz
1130-1530 Daily Franco-African music North Africa (presumed) 17620-17695
Note: Frequency can be anywhere in the range 17620-17695. The purpose of this non-stop African music service is as source of interference or distraction against the Libyan opposition station Sawt al-Amal.

I suspect that there will ultimately have to be a winner and loser as
we saw in the VHS and Betamax wars 25 years ago or in the FM wars long
ago. It makes no sense for one company to maintain and enhance two
incompatible technologies broadcasting essentially the same
information. There would have to be a transition period possibly
mandated by the FCC, but ultimately many fancy satellite radios will
have to become doorstops.

Probably not impossible to hack, but likely a lot harder. And I
wonder whether the result is really worth the effort.

The real question is whether the merger of two companies companies that both hemmorage a lot of money will result in anything more than a bigger money pit. Both of them have rewarded their on-air talent handsomely, but subscriptions are not generating anything close to a break-even operation. Also consider they are competing against Ipod technology and existing free brodcast stations both of which media offer notable benefits over satellite based radio.

They used to be good, many moons ago. Ian McFarland was great.

But that was then, and this is now.

On a percentage basis, I suppose we're about as fucked up as the Americans.
That said, I see there's room for improvement on both sides, agreed?.
It starts with not belittle(ing), slandering, bashing, patronizing etc. But
then that goes for most souls on this sphere, doesn't it? We never learn!
The Newsgroups, this one in particular might be a good place to pracitise
tolerance, and like descriptives.

He was pretty cool. I went to an ANARC Convention in Toronto once and somehow after I left there was some kinda deal where one might recoup ones taxes they paid whilst in country, along with that info came an opportunity to nominate a Canuck as a Goodwill Ambassador or something like that through their Prime Minister or some such high office. I nominated Ian McFarland... and at a later ANARC Convention in Montreal, almost as soon as I walked in the door of the hotel/motel he was right there to greet me and thank me for the honour.

I was impressed that he even knew who I was just walking in the door.

I agree that it would be best to be neighbourly but if one person
persistantly insults your country for no reason except "ignorant and
proud of it" he deserves a shot in return. There's only one way to
handle a bully and it's not "turn the other cheek"

For a start, taking a minor traffic accident in Kandahar and using
that to maliciously heap contempt on all Canadians is
(1) overgeneralization to the extreme
(2) shows insidious intent.
I used demented deliberately as it opens the possibiliy to possession
by a small demon. Get help...go see an exorcist.

Those of us who have been involved with HD since its earliest developmental days feel that the project is going ahead faster than expected. The significant FMs in the top 100 markets, with few exceptions, are all on with HD or are committed with contracts signed. There are already several hundred "first step" HD-2 channels going, and more and more receivers are appearing, some getting close to the critical price points for mass sales.

As I have said, AM HD may be a different issue (although the truly significant stations are on in the major markets) but that is a problem with the health and future viability of the AM band, not with HD itself.

Keep in mind that much new technology is expensive in its early phases... my first VCR cost over $800, while my first CD player cost $1,400. I can now get a VHS (were I to want one) for around $30 and a portable CD player was spotted at retail last week for under $15.

I would like you to define what you mean by "bottom dwellers" and give
any facts or statistics that would support your opinion. If you have
none, that means that your opinion was uninformed and ignorant. Don't
bother looking at UN data: they all show Canada near the top of the
ratings, often way ahead of the US.

Nah, all it means is that it is my opinion.

Oh yeah, the UN don't mean squat to me!

Try again, boy.

>
> I want a portable kind so I can travel with it.

There are a number of portables that might be considered:
Sony ICF-SW7600GR (best for SSB in its class, speaker audio modest, may need some more antenna when used on batteries, AM sensitivity good but bandwidth tight, FM subpar, telescopic antenna somewhat weak point while otherwise mechanics are fairly solid and QC and durability seem good)
Etï¿½n E5 = Grundig G5 (nice rx, quite sensitive, decent for SSB, decent speaker audio, FM pretty good, tuning wheel is a plus, occasional QC issues)
Kaito KA1103 (same basic rx as E5, but different user interface, ergonomics usually considered not so great)
Sangean ATS-909 (good, fairly flexible rx, tuning wheel, battery hog, tends to require external antenna or mod for good sensitivity, FM pretty good, more suitable for home use)
Grundig YB400PE/G4000 (a generally decent rx with good image rejection, SSB bad, good speaker audio, good AMBCB sensitivity, good FM rx, runs off 6 AA cells, occasional QC issues or high phase noise)
Sangean PT-80 (seems to be a generally decent performer with good speaker audio but with poor SSB, has tuning wheel)

Insufficient 2nd IF image rejection (of little more than 40 dB) is not uncommon, e.g. in 7600GR, E5/1103 (YB400 has ~60 dB). This results in weak ghost signals 900/910 kHz lower, which is likely to bother those who want to listen to 60 meters or the 20 meter ham band (it's not much of an issue for the casual broadcast listener).

Yet smaller models include:
Sangean ATS-606A (a classic, AM-only, but with 1 kHz steps, apparently a bit of a battery hog but generally liked by owners)
KA1102 (probably the least expensive set with SSB, decent performer, possibly sensitive to AM breakthrough, occasional QC issues)

Other accessories that may be needed/useful:
* Some good rechargeables (e.g. Sanyo or Panasonic, maybe some Eneloops or equivalent cells), and one of the few chargers that doesn't wreck them overly fast by overcharging.

* Some kind of portable loop antenna to achieve better signal and less man-made noise (e.g. KA33)
* Some headphones (e.g. Koss PortaPro or KSC-75, or Sennheiser PX100 - nothing keeps you from using more fancy ones of course, but I find an old Sennheiser HD420SL is entirely sufficient for MW/SW)
* The usual literature (PWBR, WRTH)

One thing that is not clear from the G1's sales leaflet is whether it has synchronous detection like the E1. Does it?

4267. AM Synchronous Detector Review: Sony ICF-2010 vs RL Drake R8B

Newsgroup: rec.radio.shortwave
Date: 2007-02-22 00:17:42 UTC
From: Larry Dighera <LDighera@att.net>
Message-ID: <15mot251jfkri9ra3qr8evo35r1rv1bpi8@4ax.com>
Source record: 106265

This is a first draft. Critique, corrections, and suggestions for improvement and inadvertently omitted information welcome.

AM Synchronous Detector Review: Sony ICF-2010 vs RL Drake R8B

Two terrific SWL receivers with comparable performance up to a point.

Operating technique differs between these two synchronous detectors. Because a synchronous detector is phase-locked on the station's carrier frequency, it is able to overcome phase distortion introduced in the incoming signal by dynamics and irregularities in the Earth's ionosphere and magnetosphere. The restoration of the signal's phase relationship results in a significant increase in readability. Both receivers' synchronous detectors are enabled by pressing the respective 'Sync' button. The difference in their operation occurs when adjusting the other signal enhancing function of this remarkable AM detector.

One of the primary tools employed by the radio operator is the selection of bandwidth appropriate to the current reception conditions. Narrowing the bandwidth is effective in removing two additional types of signal degrading effects: atmospheric noise, and adjacent channel splatter and heterodyne. T?he AM synchronous detector provides the means to continue the exploit of this bandwidth narrowing philosophy significantly by providing the means to further restrict the detection envelope to only a single sideband of the inherently double-sideband AM signal

This 50% reduction in the significant portion of the incoming signal permits the bandwidth to be further narrowed to reduce the amount of noise being demodulated, thus improving the signal to noise ratio. It also permits the operator to choose the sideband experiencing the lessor adjacent frequency interference, further increasing the signal to noise ration.

With the Sony ICF-2010, the selection of which sideband on which the detector will lock is achieved by changing the main tuning setting. The RL Drake R8B receiver provides for selecting the sideband without changing the position of the receiver's main tuning by pressing the 'LSB' or 'USB' buttons. To this point the effects of adjusting the receivers results in similar enhancement of levels of signal intelligibility. However the RL Drake R8B provides two additional signal to noise enhancing functions: 'Passband Offset' and 'Notch.'

Drake's 'Passband Offset' control "alters the position of the receiver's intermediate frequency (IF) passband without disturbing the

main tuning." Changing the setting of this control permits the operator to emphasize a portion of the audio spectrum contained within the sideband being detected. This function can further enhance the readability significantly, and places the capability of the Drake receiver above the Sony. But the Drake has another effective function to even further improve the final quality of the radio signal for listening.

Drake's 'Notch' filter provides the radio operator the ability to remove narrow band of the audio spectrum (500-5kHz) contained in the final signal output. It is useful to remove any steady tone that remains such as an interfering heterodyne. Drake also provides a multi-position Noise Blanker notably absent on the Sony.

While the Sony ICF-2010's synchronous detector provides superlative signal clarification and intelligibility, the RL Drake R8B's ability to enhance the most marginal of radio signals to pleasant readability, well beyond that of the Sony, is nearly magical.

Source record: 106270

For some reviews on various shortwave radios, you would want to take
a look at radio reviews at, http://www.radiointel.com/
and http://www.eham.net/
Your will find reviews by different users/owners on many different
shortwave receivers. I own a Panasonic 2200, Sony 7600, Eton E5, Eton
E100, Kaito/Degen 1101, 1102, 11, and just ordered the DE101.
For days or weeks of backpacking in the wilderness, I take the
E100, DE11 or I will take the DE101 when it arrives. Very small, and
weigh very little. They take up very little room in a backpack. But
they grab all the major international broadcasters very nicely. And if
atmospheric conditions are really good, even some of the weaker ones.
For camping without much backpacking, I would take the 1102, or
1101. They are better radios and have a few more "bells and whistles"
for more signal capture then my smaller "backpack" radios. They are
also a bit bigger and heavier of course. My larger and heaviest radios
stay at home for listening and are even more sensitive for pulling in
the more difficult signals.
For listening at home I prefer the Panasonic 2200, and the 7600,
and Eton E5.
I suppose that I would have to say that I like them all, for
different reasons. They each have their place. But then, as you can
see, I am a bit of a collector as well. ;-) (Including coins, and
meteorites). But now that I am retired and living on a lower income, I
won't be doing as much buying anymore.
My Panasonic is an excellent radio, but of course you can only find
them used these days. My Sony 7600 is, in my opinion, an excellent
radio that I can highly recommend. Definitely one of my favourites. I
will never sell it.The Kaito/Degen 1102 is, for the money, and it's
size, an excellent deal. The best bang for the buck as others have
said on other web sites. I tend to agree.
Among all these radios you won't find one that is all things to
all people. Decide what you are going to do with your radio, where you
will use it, how much you want to spend, how small and portable you
want it to be, and go to as many sites and study as many reviews that
you can. You don't have to rush your decision. But check out those
two websites I mentioned above.
Welcome to the hobby. :-)

The distortion is caused by selective fading where the carrier is reduced in amplitude resulting in the equivalent of an over modulated signal. It is the effective overmodulation that results in a distorted signal when using a peak detector.

> The restoration of the signal's phase
> relationship results in a significant increase in readability. Both
> receivers' synchronous detectors are enabled by pressing the
> respective 'Sync' button.

Rather than 'restoring the phase', you are switching from a peak detector to a product detector which does not rely upon receiving a carrier to demodulate the signal. A product detector has two inputs, one being the received signal, the other being a locally generated frequency (I choose not to say carrier). In a sync detector, the locally generated frequency is phase locked to what remains of the received signal's carrier. (Note, by using SSB you are doing the same thing, EXCEPT the locally generated frequency is not locked to the incoming signal. Thus fine tuning is needed when using SSB. I don't call this ECSS, because the you do not Exhault the Carrier.)

Without the sync detector one can still narrow the bandwidth to include one
sideband and the carrier.

> <snip>

Hope this helps

Hello, Moonlite Mile.
I believe in critical thought. Every idea must me examined in minute
detail, from every possible angle. Nothing is out of bounds, there
are no sacred cows.
You are attacking the US. Now tell us about America's greatness. Let
us know what is good about the US. What are our strengths. What is
our virtues.

A few days ago I picked up at an estate sale, for 3 dollars, a
National
Panasonic "World boy" custom model# RF-850HB ac/dc radio. AM/FM/SW.
12 transistor 8 diodes. Has anyone seen or heard one of these
radios? I am amazed, extremely amazed at the volume and sound quality
of this little portable. I can't believe that it sounds so well.
Volume is loud, too loud; speaker distorts finally at upper limits of
the volume control. But the sound is high-fidelity, crisp, clear,
clean. Lows below and the highs are crisp and clear. Unbelievable.
Made in Japan in 1968. Came with one of those period ersatz leather
cases. On the case handle there is a small pouch containing the
earphone. Excellent condition. I'm telling you, Bose has nothing on
this radio. I opened it up to clean the band selector, and noticed
the transistors. a few of the familiar period cans, but several very
small white "pucks" looking much like SMD technology, with the three
leads coming out the sides. Marked with 459, 185, 183, etc. Two
transistors I couldn't see, but I believe the were mounted push-pull
for the audio final under and on the metal plate lining the underside
of the battery box. The Japanese did well back in th' day with this
one. Sensitive, too. Picks up as well as my Worldstar or Grundig.
It has a 7" ferrite rod inside and a small telescoping whip.

I'm not hearing it at 11 PM local time in central Pennsylvania.

On the other hand, I've been having something trashing the lower half
of the longwave band lately. It turns on and off cleanly at intervals
I haven't had time to determine yet. It's probably local, but I have
no idea what it is. It just started a week ago or so.

France Inter's 2 megawatts ERP is relatively booming in to central Pennsylvania tonight at 0435 UTC. In fact, it's the first time I've heard a longwave station clear enough that I would have 100% copy if my French was better :) Other western European LW stations are coming and going just above the noise as they usually do. My antenna is a Longwave Engineering H-800 Skymatch outdoor active vertical E-field probe.

Military members who fail to obey the lawful orders of their superiors risk serious consequences. Article 90 of the Uniform Code of Military Justice (UCMJ) makes it a crime for a military member to WILLFULLY disobey a superior commissioned officer. Article 91 makes it a crime to WILLFULLY disobey a superior Noncommissioned or Warrant Officer. Article 92 makes it a crime to disobey any lawful order (the disobedience does not have to be "willful" under this article).

In fact, under Article 90, during times of war, a military member who willfully disobeys a superior commissioned officer can be sentenced to death.

Seems like pretty good motivation to obey any order you're given, right? Nope. These articles require the obedience of LAWFUL orders. An order which is unlawful not only does not need to be obeyed, but obeying such an order can result in criminal prosecution of the one who obeys it. Military courts have long held that military members are accountable for their actions even while following orders -- if the order was illegal.

"I was only following orders," has been unsuccessfully used as a legal defense in hundreds of cases (probably most notably by Nazi leaders at the Nuremberg tribunals following World War II). The defense didn't work for them, nor has it worked in hundreds of cases since.

The first recorded case of a United States Military officer using the "I was only following orders" defense dates back to 1799. During the War with France, Congress passed a law making it permissible to seize ships bound to any French Port. However, when President John Adams wrote the order to authorize the U.S. Navy to do so, he wrote that Navy ships were authorized to seize any vessel bound for a French port, or traveling from a French port. Pursuant to the President's

instructions, a U.S. Navy captain seized a Danish Ship (the Flying Fish), which was en route from a French Port. The owners of the ship sued the Navy captain in U.S. maritime court for trespass. They won, and the United States Supreme Court upheld the decision. The U.S. Supreme Court held that Navy commanders "act at their own peril" when obeying presidential orders when such orders are illegal.

What makes you look bad in my eyes is alluding to other people
disrespecting your opponents opinion in this debate. The fact that you
feel the need to fall back on a debate tactic shows weakness. Truth
needs no debate tactic and can stand on it own in the face of greater
odds. However, if it is BS then you don't have the power of unassailable
truth to prop up your argument and so the fact that you feel the need to
fall back on a device is understood.

You've done a bit of research on the UCMJ and a little history of lawful orders. You copied the above, verbatim, from this website: http://usmilitary.about.com/cs/militarylaw1/a/obeyingorders.htm.

But what about my question? Please elaborate on this "sworn duty". I do not recall such an oath when I was active duty, a sworn duty to refuse to fight for insane plots for world domination. Any sworn duty not to fight, regardless if the war .
Did you get your information from a liberal website? I've seen these talking points before. Arguments that try to persuade military members and the general population that the GI's need to disobey the orders of their superiors because the oath taken at induction says (in part): ". . . I will support and defend the Constitution of the United States against all enemies, foreign and domestic. . . and that I will obey the orders of the President of the United States and the orders of the officers appointed over me, according to the regulations and the Uniform Code of Military Justice." The reasoning goes something like this: The UCMJ says that orders must be followed, and to follow them they must be legal. Since the war is "illegal" , then any orders pertaining to the war must be illegal. They also argue that the duty of the military member is to the Constitution first, all else is secondary. To try to prove that the war is illegal, liberals make a lot of talk about The Hague Convention, Nuremberg, Military Tribunals, Geneva Convention, all kinds of such things.

You should've copied off more of that website; you would've come up with this information: The Court of Military Appeals held that "the justification for acts done pursuant to orders does not exist if the order was of such a nature that a man of ordinary sense and understanding would know it to be illegal." After part about mistreating prisoners, this: ". . . there is no requirement to obey orders which are unlawful. However, here's the rub: A military member disobeys such orders at his/her own peril. Ultimately, it's not whether or not the military member thinks the order is illegal or unlawful, it's whether military superiors (and courts) think the order was illegal or unlawful." There is a lot of interesting information on page 2 of that website.
There does not have to be a formal declaration of war from congress. The President can utilize the armed forces, of which he is chief, when he sees a requirement. Clinton did the same.

The things I have disputed are not opinions. They are lies.

AM talk does not get higher rates than FMs with equal audience.
There is little AM audinece under 45
The AM audinece is shrinking.
There is little AM audience at night.

These are facts proven by Arbitron and the financial data collecion
organizations.

No audience interest. Spanish language media is culturally of nearly no
interest to non-Hispanics.

P.S. Radio has no SAP channel.

Press Release - PHOENIX, AZ -- (MARKET WIRE) -- February 21, 2007
-- Nova M Radio, Inc., a National Progressive {Liberal} Talk Radio
Network, announced the company plans to begin broadcasting on the XM
Satellite Radio Network on March 01, 2007.

Anita Drobny, the CEO of Nova M Radio, commented, "We are very excited
to begin broadcasting on the XM Satellite Radio Network, and help
expand our LIBERAL and Progressive Talk Radio format."

About Nova M Radio, Inc.
Nova M Radio, Inc. is in the business of building a National
Progressive {Liberal} Talk Radio Network, with a partnership with the
original founders of Air America Radio Network. Based in Phoenix
Arizona, Nova M Radio currently broadcasts in San Francisco, Seattle,
Sacramento, and Sirius Left Radio Network, with plans for additional
Affiliates throughout 2007.

- As I said, no interest.

-R- I am Interested.

- It is expensive,

-R- It's not about the Money
- - - It's About Fairness and Equality between All Peoples
Asian-Americans; Hispanic-Americans; African-Americans
and yes even European-Americans.

- and would attract no new viewers

-R- I would Watch, Listen and Learn.

- (radio has no SAP)

-R- There are plenty of Saps Listening to the Radio all day long :o)

In the 'spirit' of true Bilingualism - It Ought To Be A Law !

If 5%-or-more of the 'potential' TV and Radio Listeners in a
Broadcast Area are English Speakers then By-Law and the
SAP on all Non-English Language TV and Radio Stations
"MUSH" Broadcast in English the Programming Content.

Just thing of all the Jobs it would create for Bilingual Peoples
especially for those 'whos' Primary Language is English.

i know - it's better that i should learn spanish ~ El RHF Olé !

I used to listen to Tahiti in the 80's on 15170. They could be heard late at night in the summer months. In those days Radio New Zealand was a DX catch. They were using only 7.5-kw compared to 100-kw now. I had a reception report read on the air by Arthur Cushen. The reception was barely good enough to make out my name. I got it on tape somewhere.

> radios?

Congratulations on a good deal!

Panasonic, Sony, Sanyo, Toshiba, Regency and lots of lesser known brands made some really nice sounding transistorized portable radios back then. One that I particularly enjoyed was an AM only GE model with an integral leather case that used at least 3 D batteries. That estate sale bargain had audio that was clear and mellow and could easily fill a room. The large built-in ferrite antenna allowed a lot of stations to be caught, but I used it mostly as a shop radio.

> I am amazed, extremely amazed at the volume and sound quality

I'm surprised because most of my transistor radios, even the cheapo drugstore specials from that period came with real leather slip-off cases.

> On the case handle there is a small pouch containing the

That is so juvenile. Little Billy did it so it must be OK...

I did not support Clinton's adventurisms and I do not support Mr.
Bush's. Pre-emptive attacks on an mpotent sovereign nation
constitutes war crime. We are a rogue nation. The military is not
defending the country against the threat from within. Bush and Cheney
are a hundred times the threat that Saddam or Osama Bin Ladin ever
were.

We are finished.

It's not being generated in the receiver, as it is received in other
radios also. It's probably a local transmitter, but I'm surprised by
wide the bandwidth it occupies.

>On the other hand, I've been having something trashing the lower half
>of the longwave band lately. It turns on and off cleanly at intervals
>I haven't had time to determine yet. It's probably local, but I have
>no idea what it is. It just started a week ago or so.

I haven't heard that, but there is a tone that descends in audio
frequency steps that can be heard faintly under nearly all the
stations on entire SW frequency band. I need to check and see if that
is audible on another receiver to determine if that signal is external
or internal.

If it was after 6 PM, that is not, at least legally, IBOC/HD operation.

With declining revenue share, and heavy operating budgets, the
stations can't afford to forego that money. Even with the impact it may
carry.

When I was at CBS, and Metabolife came to town, the sales duck and
the upper echelons of manglement married the station to this product. To
the tune of millions in revenue. Metabolife literally allowed us to hit
our corporate numbers. Without it, we would have been in hot water with
BlackRock.

And the station hawked Metabolife at every appearance, station event,
and promotion. They literally shared our booth at a local music
festival. Even while the news was filled with anti-ephedra/ephedrine
stories, some taking direct shots at Metabolife.

When Metabolife took a direct hit in the legislature, so did the
station.

Didn't matter. The money was all that mattered. Because in the US,
Radio is ALWAYS about the money. Has been since the 20's.

There are some interesting figures here, regarding alternative media
outlets, and how they may impact Radio's Ratings and Revenue.

>
> Does anyone concur or know HD receiver design characteristics?

IF DSP seems pretty much a necessity for AM IBOC, and at least
pseudosynch detection appears to be fairly standard with DSP rigs.
(Whatever "pseudosynchronous" means exactly in this context. There are
quite a number of fairly different "synchronous detectors" to begin
with, and e.g. the Sony CXA1376 internal one and the AR7030's are hardly
comparable IMO, save for the fact that a product detector is involved.)

Another ironic footnote: It seems that RDS support is standard in FM
IBOC receivers, while otherwise it is not that common among receivers
sold outside Europe.

BTW, those who are already using DReaM for DRM decoding should try the
USB/LSB modes.

No, that is not it. SAP in Spanish offers a signficant new audience for
English langauge TV. SAP in English offers little or no benfit to Spanish
TV's. SAP is not a requirement, so the incentive is purely economic: more
salable viewership. Since there is no return on investment for English SAP,
no station will do it.

I have to confess - I am baffled at why you'd want to see it.

I speak a little Spanish, and I can tell you that, between the bodice-rippers and inane comedy shows and etc., there is little of value there (at least to this gringo).

Yes I'm afraid they are, they (NHK) have just posted a message on this
newsgroup. Effective Oct. 1 2007 they are dropping many services
including the english broadcast to North America. This is too bad, as
I will miss them.

That is precisely why SAP would have no benefit... totally different
cultural values.

Juvenile? What are you talking about? define your terms, please. You lack understanding. Where in my statement did I use Clinton's actions to justify the use of military power. Clinton did things during his presidency that Bush is criticized for; get the point? Did you not read everything else I said? Can you not understand? You do not understand. Latch onto my last sentence somehow get "Little Billy did it so it must be OK" out of it. Prove the claims you made. If "Bush and Cheney are a hundred times the threat that Saddam or Osama Bin Ladin ever were", back it up with clear, reasoned evidence, considering all facts, to include the fact that the United States maintains a defense force equal to the rest of the world combined, with only a tiny percentage of its GDP. Do you know what a "Rouge" United States can do? Why does Chavez, Kim Il, and Castro still live? Yes, You made it clear that you believe we are a rogue nation. You are not capable of critical thought. Give us the criteria for a rogue nation; Are there any other rogue nations about? And why? Do you not understand, that if we were truly a rogue nation, what the country is capable of? What would a really rouge United States look like? With our vast economic and military might? You cannot reason, can you. You are also a plagiarizer, copying a website as your own words. Do not bring a knife to a gun fight. If you want to have a discussion with people capable of thinking critically, come better armed than you currently are. You are a hater, you hate and despise the greatest nation, the GOODEST (I know that wasn't a real word) nation, to ever exist. Instead of marching across Asia at the end of WWII, we assisted in rebuilding our former enemies' infrastructure. Granted,

the QUALITY of the American people isn't the same in this generation as in that one, (as evidenced by folks like yourself) there is still a significant patriotic core. I will no longer have anything to do with you. Having a reasoned discussion with your ilk is as pointless as arguing with one who's mentally ill.

I'll have to go look again; maybe it is a real leather case. The strap has a little pouch that still contains the earphone. It needs an AC cord, though. I ordered one that fits a Transoceanic D7000, American version. The dimensions appear to be right.
My wife was even impressed with the sound. She has it in the kitchen now. Took it away from me. The power switch is a rocker type and is smooth, along with the smooth slider volume control. The tone control is interesting; it is a slider, but it must be tapped. At the far left it's marked "news" and seems to accentuate the center audio freqs; as the control is moved right, near the center it is marked "soft" and the tone does soften. As the control is moved farther right towards the area marked "music" the highs are brought out, and are brought out very well. The dial lamp is out. I'll need to look at that.

Sound quality on some of those old radios will amaze you.At Shannon Wright Compound,I was sitting in one of our trucks with Martin,(he is an Indian from Minnesota,not India Indian,American Indian) we was waiting on some of our Helicopters to come in,so we could load them up again with more Rockets and small arms Ammunition.I had my bigger portable radio turned on,Motorola.He commented on how good my radio sounded.Real pleasant mellow sound.

Yeah, I guess it really is leather. it's just stiff like cardboard.
No cracks yet, maybe I out to treat it. Strap is clearly plastic
though.

I've never used the Sony 7600, so I'm curious, just how much better
is it supposed to be over the Kaito 1102 or 1103? I've always thought
Sony products were overpriced...

Crane is heavily marketed in some venues. like late night talk radio.
Crane's stuff is made cheap overseas. I did buy one though, Many
years ago. The Sangean CCRadio. It's AM/FM/WX. It is pretty
sensitive and brings in the weather very well. That was the main
reason I bought it. I live in tornado country. Its main claim to
fame is its DX capabilities in those bands. Only 5 presets though.
Digital with alarm. I put in my order as soon as I heard about it,
and I got a very low serial number. But it was recalled for a defect;
I sent it back and it returned repaired. As far as it goes, it's OK,
but the sound quality is what you'd expect from a cheap plastic
portable made nowadays.
What is the problem with making good-sounding radios? Is it that they
don't want to use quality speakers, or push-pull audio circuits with
quality components? With current technology, good tone control ought
to be nothing.

Of course I bought my radio many years ago. Crane used to have a good
reoutation. What happened; did he use to have a good supplier that
dried up? Sangean just put his name on their radio. Maybe Sangean
went to crap.

I went to that Crane website you gave me, and right there looks like the radio that I bought from them many years ago. It is the same style, knobs, etc. But subtle differences. In the picture where it says DX mine says WX, and The one in the picture does not have "SANGEAN" on it. It's that CCradio plus. I bet Crane went to a cheapo asian manufacturer that cuts corners by cutting out quality. I guess they make garbage now. I won't be buying from them in the future. You know, in one of these forums I recall folks talking about an antennae tuner or something like that put out by Crane, and they were saying it was trash too.

Moonlight Mile sent another diatribe. I did not read it, except for the first paragraph and the last. Too distressing for me to read the writings of fools and nuts. I will no longer read nor respond to him or David. David is unwise, but Mile is a nutjob. It would be well if you and DXace and all others ignore them; maybe they'll go away. I do not participate in these groups to find kooks, flakes, and haters. I took history in college, and enjoyed it. Made excellent grades. History is important, it should be studied carefully, but very rarely is. Something I noticed in American history is that the country should not be here. From the beginning and through every period of American history, we've overcome pitfall after pitfall, beat all the odds. The odds are overwhelming that we still exist, and exist with so much power. Like Paul Harvey said, we have only 5% of the worlds population, but half of all its good things. I firmly believe the hand of Providence is in it. There is so much that should've gone wrong; a benevolent first president that could have become king, but guided a young Republic. The first of Presidential elections went with a smooth transition of power (there was much enmity between parties involved) which never occurred before in history. And on and on and on.

Something else I learned: Judge past historical players NOT by your own standards, or the present day standards. They must be judged by the standards of the period, and of their PEERS. When they lived, the future did not exist! No brainer, ha.
Too easy to fall into the hindsight trap. The US had many faults and did some bad things, but the only proper way to judge her is by comparing her to other peoples and nations during the relevant periods.

HD Radio/IBOC is dead, dickhead.

4377. Now that CW is gone there will be more ham to non-ham conflicts.

The code hating losers were too stupid and lazy to learn and use CW,
they're also probably going to be too stupid and lazy to solve TVI
and interference problems with their neigbhors. There will be more
amateur to amateur and amateur to non-amateur conflicts. Hams will look
bad and the FCC will regulate the service more because of all the retards
we let have HF privledges. CQ Breaker, CQ Breaker.

Welcome to CB everybody.

>
> No, that is not it.

1 - SAP in Spanish offers a signficant new audience for English
langauge TV.

2 - SAP in English offers little or no benfit to Spanish TV's.
SAP is not a requirement, so the incentive is purely economic:
more salable viewership.
Since there is no return on investment for English SAP,
no station will do it.

DE - Once again I will re-post myself :

-R- It's not about the Money
- - - It's About Fairness and Equality between All Peoples
Asian-Americans; Hispanic-Americans; African-Americans
and yes even European-Americans.

In the 'spirit' of true Bilingualism - It Ought To Be A Law !

If 5%-or-more of the 'potential' TV and Radio Listeners in a
Broadcast Area are English Speakers then By-Law and the
SAP on all Non-English Language TV and Radio Stations
"MUSH" Broadcast in English the Programming Content.
- - - Basically the same Requirement for Voting and Public
Documents with all "Minority Groups" and Non-Spanish
Speaking Americans are rapidly become the Second Largest
Minority Group behind Hispanics in Hispanic Dominated
Urban and Sub-Urban Areas. It is "The Duty" of Public
Broadcasters to SERVE "Minority Communities" and now
in many cases the Spanish Language "Only" Media is
neglecting the Non-Spanish-Speaking Americans. The FCC
should set in and 'regulate' these Broadcasters who as you
so aptly point out are only concerned about the Money.
A FCC Broadcast License 'implies' Public Service and
English SAP Broadcasting should be a Mandated Public
Service of every Broadcaster broadcasting in any language
other-than English. The Rights of English-Only-Speakers

MUST BE PROTECTED where They Are A Minority.
Once Again - It's About Fairness and Equality between
All Peoples : Asian-Americans; Hispanic-Americans;
African-Americans and yes even European-Americans.
-Equal Media Access- It's not about the Money - It's about
Basic Human Rights For All -including- English-Only-Speakers.

PLUS - Just thing of all the New Jobs it would create
for Bilingual Peoples especially for those 'whos'
Primary Language is English.
- - - Affirmative Action for English-Only-Speakers
When Do We Want It - now, Now. NOW !
Where Do We Want It - On the SAP Channel of All
Spanish Only TV Stations do it now, Do It Now. DO IT NOW !

Hey DE - You could be the new Czar of a National
Spanish-to-English SAP Initative with mucho Federal Funding.
Funded by a 1% Nation-Wide Radio and TV Marketing Sales
Tax paid by Advertisers to bring English into Every Home.

La Igualdad es Una Calle de Dos Maneras
{ In my best Babel Fish Translation }
Meaning : Equality IS a Two Way Street.

I went to www.devilfinder.com and typed in: "Abraham Lincoln:
Tyrant,Hypocrite,or Consummate Stateman?" and came up with the article
by that name. The writer defends Lincoln against the libertarians and
other critics. It's a good read. He does not say Lincoln was a
Traitor; just the oposite.

That's right, radio hobbyists.

The night we've all been waiting for - at the stroke of Midnight and the HF bands open to no-coders at last.

I predict that Mr. Davies will be the first no-coder to make a qso on HF.

When the timer at WWV chimes midnight on the dot, The Great Time Lord will key his microphone and lead the way into HF radio for thousands of other no-coders.

I also predict that he better check in to The Great Liberty Net this weekend or else he will go to Hell with Porkbutt and Loose Orifice.

I am the great profit.

I have spoken.

I've read and studied much about the civil war. I still cannot make up my mind about whether or not it should've occurred. I think perhaps that the Southern states may had better presented their case to the North petition. By presenting the proofs and evidences of the will of the peoples of the Southern States. Send delegations to speak to Congress. Reason things out, point out to the Northern States that as the first 13 colonies (states) decided to separate from the British Empire and form their own destiny, then naturally others have the exact same right as they deem proper and necessary. If it was done with reason and not emotion, the Southern secession perhaps could had occurred peacefully and smoothly. One of Lincolns arguments was that the association of the states together, united, under a federal government, was a sort of "contract" together, and all sides must agree. Of course Lincoln was saying that the North did not agree with the breaking of this "contract". That could've been used against him, and his position undermined, if the proposition was placed before the Northern people with persuasive argument.
I still think that Providence had a hand in it all. Considering the events of the 20th century, I think that it would been very difficult for the divided continent to get cooperate to triumph over foes in Europe and Asia. The territories and lands in the west may had ended up in the US, or in the CS, or as their own country. Who knows. What would had happened during WWII? The cold war? I don't know.

Yes at 12:00 eastern time, 9pm on the west coast. People may want to listen between 28.300 and 28.500 mhz. USB. In our community there are informal nets planned both tonight and tomorrow night. Who knows.......maybe we will get lucky and the band will open up. Might be interesting for SWL's to listen for local ground wave signals even if the band is not open.

Probably not HD, as not in 6 AM to 6 PM or sunrise to sunset, whichever gives more, legal period or in the experimental period. Clear is one of the cleanest technical operators, so doubt a violation here.

<HD Radio/IBOC is dead, dickhead.

There are now over 1200 stations on the air, representing nearly every
significant station in the top 100 markets.

OK I looked up bianca.com on wikipedia. I see what it is now. They
said that bianca.com is: ". . . a sort of petri dish for incubating
deviant behavior . . . "

4406. Re: QUESTION - Why the H*ll Don't the Spanish Language Radio and TV Stations have English on the SAP Channel ?

There is no interest, either, in doing SAP to English of the Asian channels
in LA and San Francisco. This is not unfair, just realistic.

>In the 'spirit' of true Bilingualism - It Ought To Be A Law !

A law like that would violate freedom of speech, by saying that if you want
to use any language other than English you have to incur additional and
considerable expense (Simultanteous translaters run as much as $500 an hour,
you know) while English stations do npot have to do this. Clear violation
and an impediment to expression.

>If 5%-or-more of the 'potential' TV and Radio Listeners in a
>Broadcast Area are English Speakers then By-Law and the
>SAP on all Non-English Language TV and Radio Stations
>"MUSH" Broadcast in English the Programming Content.

Nearly nobody is going to listen. Imagine trying to do SAP on a soap opera
to english... the translation and dubbing of an English aoudio track would
cost around $10,000 to $20,000 an hour unless you did all the dialogue in
one voice.

And then the ads... most creative does not translate at all, and the
advertisers woulod be furious.

As I said, even newscasts would be $500 to $1000 an hour for one
simultaneous translator.

And nobody would listen.

Total weekly cost: about $700,000 per channel.

>A FCC Broadcast License 'implies' Public Service and

>African-Americans and yes even European-Americans.
>-Equal Media Access- It's not about the Money - It's about
>Basic Human Rights For All -including- English-Only-Speakers.

How does a classic rock staiton serve me? I hate classic rock, so it does
not serve me. But it does serve lovers of that kind of music. Same with
Spanish langauge stations... stations were never intended to serve everyone,
and the licensee has broad discretion in which segment of the audience they
want to serve, and can serve that niche exclusively.

>PLUS - Just thing of all the New Jobs it would create
>for Bilingual Peoples especially for those 'whos'
<Primary Language is English.

It would bankrupt stations, and provide no useful service.

It also violates the US Constitution quite royally.

Do muslims really shave their balls?
I think some wipe their asses with their fingers (they carry a water
bottle to the restroom for finger rinsing) and some use three small
round stones. Ayatolla Komeni said (he's dead now ;)) that you
should use three small round stones. I say give 'em broken glass

I listened to Art bell a few days ago. He's asking folks (again) to
concentrate on using mind or thought control to ask the aliens to come
and show themselves. Some callers called in to say they saw the
UFO's. Bell is claiming success. What a bunch of nutjobs. Say, I
heard something a while back about Art Bell liking them young. Tells
about his character. I had surgery on my leg last month and can't
work yet (service connected disability) so i've been tuning the radio
a lot (various SW sets and old BC radios too).
But my older CCradio radio works well enough for the weather part, and
that's what I wanted it for. It's for the cellar. AM & FM also work
ok but nothing grand. Sure as hell not worth $169.00!!!!!!!!!! Did
you see what they cost now? what a rip

As a "dumbass Canuck" I just have a few things to say. Some people here seem to think that Communist countrys simply have a "different system of government and economics", as one poster has said. If you think that that is all it is, then maybe you should read "The Gulag Archipelago" by Aleksandr Solzhenitsyn. No nation's government has enslaved or murdered more of its own citizens then the former U.S.S.R., well, except for, perhaps, The People's Republic of China. No the U.S., and the rest of the western world aren't perfect. We get some jerky leaders sometimes. A lot of us take our freedom for granted, and because of that, we are slowly losing our freedom to gradual, creeping socialism of one sort or another. It's happening in Canada. We had more freedom forty or fifty years ago. It's also happening in the U.S., but they aren't as far along the road as we are. But if things keep going the way they are, we will all eventually lose all our freedom.
But our western way of life is a hell of a lot better then anything in any Communist or Fascist, or Islamic country, or in any country that has some sort of totalitarianism. And although the U.S. has its problems and isn't perfect, it's a hell of a lot better then any of those dictatorial countrys. And none of the rest of us are perfect either. But hell, if it wasn't for the U.S., our countrys would all be Communist countrys controlled from Moscow a long time ago. And we would all be brainwashed slaves to our "comrade great leader", or slowly dieing in concentration camps, or already dead. So, for this, all freedom loving people in the world, owe the U.S. a huge "Thankyou".
Oh yes, someone said that the U.S. dropped H bombs on Japan??? No, they didn't! Look it up.

That's not what IBOC sounds like.

IBOC is a loud hissing noise on adjacent channels. (generally on the first channel either side of the IBOC station. Many receivers will also hear it on the second channel either side.) So if WTAM were running IBOC I'd expect a hiss on 1090 and 1110, maybe also on 1080 and 1120 depending on your radio. I've heard rumors that some poorly-adjusted stations (or radios) will hear the hissing noise on the station's own frequency as well.

The FCC only authorizes IBOC operation between 6am and 6pm. (if sunrise is earlier than 6, IBOC may begin at sunrise; and if sunset is after 6, IBOC may continue until sunset) It is rare (but not unheardof) for large stations to violate these times. I have to suspect most such "violations" are the result of FCC-authorized tests.

I did something careless (stupid) and plugged the wrong AC adapter into my YB 400. The polarity wasn't right, and now it's dead. The digital display and tuner still seem to work, but there's no sound. I've made this mistake before with other devices, with no harm done. So does anyone know, does the YB 400 not have this protection? Or clues to what it was I fried?

In fact , at this time, the power was 1 MW.

During winter, 162 kHz is using 1 MW during night time in Europe :
1700-0500 UTC.

In summer, it's 1 MW : 1900-0400 UTC.

Modifications between winter/summer are at the equinox.

Here comes Edweeeeeeenie ! :-)

4431. Official press release concerning Mr. Davies and Ms. Smith

Newsgroup: rec.radio.shortwave
Date: 2007-02-23 15:25:39 UTC
From: kk4tl_is_here@yahoo.com
Message-ID: <1172244338.976295.11050@m58g2000cwm.googlegroups.com>
Source record: 106429
Cross-posted to: alt.radio.scanner.flame_fest,rec.radio.amateur.misc,rec.radio.shortwave

(UPI) Birmingham, AL: Attorneys at the federal court here today announced the final results of the paternity test of Anna Nicole Smith's infant daughter. The results of this test, verified by Mayo Clinic and the UAB Medical School, indicate that Mr. Lloyd Austin Davies of Athens, AL, is, indeed, the biological father of this child. Mr. Davies holds amateur radio call sign N0VFP, and has previously gone by the alias of Profit Nutsack.

In a prepared statement, Mr. Davies revealed the details of the event. The tersely worded document reads as follows:
"I was making my appointed rounds one Saturday night on pizza patrol when this blonde jumped into the back seat of my car at a traffic light. A few hours later during my supper break we were listening to 75 meters on the Icom 706 mounted under the dash of my car. She immediately demanded that I tune to The Great Liberty Net.

"So we were sitting in the back seat listening to The Great Liberty Net. When Chicken Fornicator checked in, something came over her. A wild mood swing, and suddenly she was all over me. In what seemed like an instant, the deed was done.

"When my supper break was over, I resumed my appointed rounds on pizza patrol. As I stopped at the light on the corner of Main and Oak in Athens, the blonde jumped out of the car and walked away before I could get her name and phone number."

The test results, along with the sworn statement, will be sent to the court via express courier. This revelation promises to have major impact on the outcome of the hearings.

Locally, Channel 6 will be handling the minute-by-minute developments.

>
>The distortion is caused by selective fading where the carrier is reduced in
>amplitude resulting in the equivalent of an over modulated signal. It is
>the effective overmodulation that results in a distorted signal when using
>a peak detector.

There is a reasonable definition for 'selective fading' here:

http://en.wikipedia.org/wiki/Selective_fading
frequency selective fading is a radio propagation anomaly caused
by partial cancellation of a radio signal by itself ï¿½ the signal
arrives at the receiver by two different paths, and at least one
of the paths is changing (lengthening or shortening). This
typically happens in the early evening or early morning as the
various layers in the ionosphere move, separate, and combine. The
two paths can both be skywave or one be groundwave.

And there is an in-depth discussion of 'selective fading' here:

http://www.hard-core-dx.com/nordicdx/antenna/special/fading.html
There are two primary causes of signal fading on shortwave
multipath cancellation and polarization rotation.

...
Signals demodulated by a sync detector are not subject to
selective fading of the carrier as long as there is enough carrier
present to keep the detector locked. Long time constants on the
carrier tracking, phase locked loop allow the synchronous detector
to "fly wheel" through short carrier fades without losing lock.

[A mathematical treatise on fading is available here:
http://www.mwrf.com/Articles/ArticleID/7964/7964.html]

So, to incorporate the concept of 'selective fading' into my original
sentence, it might be re-worded thusly:

Because a synchronous detector is phase-locked on the station's
carrier frequency, it is able to overcome audio distortion
introduced in the incoming signal by dynamics and irregularities
in the Earth's ionosphere and magnetosphere, as well as multi-path
selective fading.

>> The restoration of the signal's phase
>> relationship results in a significant increase in readability.
>
>Rather than 'restoring the phase', you are switching from a peak detector to
>a product detector which does not rely upon receiving a carrier to
>demodulate the signal.

That statement seems to contradict the operation of the synchronous
detector described in the www.hard-core-dx.com article citation above.
>A product detector has two inputs, one being the
>received signal, the other being a locally generated frequency (I choose
>not to say carrier). In a sync detector, the locally generated frequency is
>phase locked to what remains of the received signal's carrier. (Note, by
>using SSB you are doing the same thing, EXCEPT the locally generated
>frequency is not locked to the incoming signal. Thus fine tuning is needed
>when using SSB. I don't call this ECSS, because the you do not Exhault the
>Carrier.)

There is an elementary discussion of detector types here:
http://en.wikipedia.org/wiki/Detector_(radio)

Although the 'peak detector is not mentioned in the above article, the
'envelope detector' is, and it seems to be synonymous.

The above article defines a 'product detector' thusly:

Product detector
A product detector is a type of demodulator used for AM and SSB
signals. Rather than converting the envelope of the signal into
the decoded waveform like an envelope detector, the product
detector takes the product of the modulated signal and a local
oscillator, hence the name. This can be accomplished by
heterodyning. The received signal is mixed, in some type of
nonlinear device, with a signal from the local oscillator, to

produce an intermediate frequency, referred to as the beat
frequency, from which the modulating signal is detected and
recovered.

So, rewriting my original sentence:

The restoration of the signal's phase relationship results in a
significant increase in readability.

to encompass the notion of product detection might look like this:

The restoration of the incoming signal's original carrier
amplitude results in a significant increase in readability.

Is that a correct statement?

>> Both receivers' synchronous detectors are enabled by pressing the
>> respective 'Sync' button. The difference in their operation occurs
>> when adjusting the other signal enhancing function of this remarkable
>> AM detector.
>>
>> One of the primary tools employed by the radio operator is the
>> selection of bandwidth appropriate to the current reception
>> conditions. Narrowing the bandwidth is effective in removing two
>> additional types of signal degrading effects: atmospheric noise, and
>> adjacent channel splatter and heterodyne. The AM synchronous
>> detector provides the means to continue the exploit of this bandwidth
>> narrowing philosophy significantly by providing the means to further
>> restrict the detection envelope to only a single sideband of the
>> inherently double-sideband AM signal
>
>Without the sync detector one can still narrow the bandwidth to include one
>sideband and the carrier.

I suppose that's true, although I hadn't appreciated it until you
pointed it out.

So, this sentence:

The AM synchronous detector provides the means to continue the
exploit of this bandwidth narrowing philosophy significantly by
providing the means to further restrict the detection envelope to
only a single sideband of the inherently double-sideband AM signal

could be re-written to remove the exclusivity implied like this:

The AM synchronous detector provides an additional means to
continue the exploit of this bandwidth narrowing philosophy
significantly by providing an additional means to further narrow
the detection envelope to only a single sideband of the inherently
double-sideband AM signal

Better?

>> <snip>
>
>Hope this helps
>
>craigm

Craig,

I sincerely appreciate your help in pointing out inaccuracies and educating me about the technical aspects of the use of synchronous detectors. If you have further critique, or issues with my proposed changes, please continue.

Latest Edition of Oexner NDB Handbook Out
Michael Oexner announces that the 2007 editions of the European
NDB Handbook & North American NDB Handbook (and their CD counterparts)

are now available. The new ENDBH 2007 contains the data of more than 6400 NDBs on 140+ spiral-bound pages in A4 format. Also the NANDBH 2007 has grown and shows the data of more than 5600 NDBs on 130+ pages.
As a new feature, the CD version contains a Google Earth compatible NDB waypoint file so that you can "fly" to NDB locations around the globe. Two small waypoint samples for the ENDBH and NANDBH are available in a 128KB Zipped download so you can develop a feeling what to expect. The file also contains sample pages of the regular listings from both editions, and ordering information.
Once again the multimedia contents of the CD version have been expanded to a total of more than 130 NDB pictures and more than 130 NDB sound clips from around the world. What has remained stable, however, are the price and the quality of the handbooks and CDs. A PDF file containing more details is also available separately from the Zip file..

Many thanks for clearing this up.

Here's the web site: http://www.codaros.com/

There are currently 72 SeaSondes.

So if each transmitter occupies 100 kHz, that's 7200 kHz of HF
bandwidth consumed by a single company, and there's 4100 kHz more
coming on line for a total of 11.3 mHz! Or have I misplaced a decimal
point someplace?

More to follow:
http://www.codaros.com/news_01_1_2006.htm

9 January 2006

California purchases 41 SeaSonde units for new program.

California has started building the infrastructure for the new $21M
Coastal Ocean Currents Monitoring Program (COCMP), designed for aiding
critical operational and research endeavors. A key component of this
program will be the continuous surface current outputs from an
extensive SeaSondeï¿½ network. The acquisition of 41 new SeaSonde and
Long-Range SeaSonde units being installed as part of this program will
bring the total number of units operated in the state to 57.

This new network will provide continuous coverage of the ocean surface
currents along the entire 1100 miles of California's coast out to

approximately 120 miles offshore. Highest resolution coverage will be set at the most critical areas, such as inside of San Francisco Bay. Once completed, the state will boast having the world's most advanced ocean current monitoring system.

This project made front page news on 8 January 2006 in Silicon Valley's largest newspaper, the San Jose Mercury News. To view the complete article published in the Mercury, click here for the PDF (approx 70K): 2006_MercuryNews.pdf

In addition, the COCMP program has a very comprehensive website, including more technical details on the program, participant information, downloadable press releases and presentations, as well as links to other related web sites. A statement of support from Governor Arnold Schwarzenegger is highlighted on their home page. See www.cocmp.org.

For further information, contact Laura Pederson of CODAR Ocean Sensors, at or phone (408) 773-8240 x15.

You can see the results of this radar here:
http://www.cencoos.org/hfrnet/

Right. I didn't mean I didn't think they'd sell it for that price. I
meant it seems like a bum deal even at the sale price.

I got the Sangean HDT-1 _TUNER_ (not radio) for $200.

It's the biggest tuner I've ever seen.* Entertaining to play with, provision for (necessary) external AM and FM antennas, in case you already have an external AM antenna. I just run another splitter into it off my active antenna array.

A pretty good AM radio as to sensitivity and selectivity, though it lacks the controls you'd really want. The defaults aren't always very good for the situation. It's pretty good listening to a weak station next to a strong (but not extremely strong) local.

Goes into mysterious modes on power surges ; clock loses 30 seconds a day, apparently not using the line frequency as a guide, which is really stupid. The power companies get AC to average exactly the right number of cycles over a day precisely to keep clocks on time.

If $200 won't bother you, it's fun to use. If it will, it's not.

Display does not turn off.

(*and I've seen tuners made in the 40s)

Sangean just keeps missing the mark for high priced bedroom radios.
The HDR1 like it's siblings should have a dual alarm that allows the
radio OR the alarm to be set for each. Sony figured this out with
their $30.00 digital clock radios. Why can't Sangean add such a
useful and common feature. Instead we get a limited value things like
RDS.

"To date, almost 1,400 FM stations have licensed the Ibiquity standard. The majority of those are on the air; and according to estimates from Ibiquity and the alliance, the number of stations multicasting is near or more than 500 (estimates vary)."
...
"The marketplace is heavy with hi-fi audio entertainment and information delivery systems. FM, satellite, iPods, MP3 players and the Internet have stolen much of AM radio's potential audience. There is no public demand for another radio band to be created to "save" AM and added to the busy array of choices."
...
"The Canadian DOC reportedly is considering adopting the Ibiquity format for FM but not for AM; Digital Radio Mondiale may be its AM choice. Ibiquity should take a long look at this development and seriously consider incorporating DRM into its AM system to make it more flexible and scalable. DRM could well become a more worthy option for AM stations and their digital future."

"Regardless, developments in and around digital radio for AM are raising pressing concerns."

Soon, analog AM will die just like shortwave.

I received a QSL from Caribbean Beacon, the broadcaster of the late Dr. Gene Scott. I made a few failed attempts at obtaining an IRC before deciding to include a U.S. dollar with the letter. The stamp shows a postage value of $1.50 but that could be in East Caribbean Dollars (XCD). If that is the currency used there, then they made a slight profit - XCD$1.50 is about USD$0.56.

My letter was mailed on September 6, 2006 and I received the card on February 20, 2007. The signature of the card includes an email address (see my photos linked below) so I wonder if they will send QSLs for emailed reception reports. It's worth a try!

Photos of the front and back of the QSL are linked from this page:

Iran Moving Aggressively in Latin America

Seems like Hugo Chavez in Venezuela is not the only one who is entering into new strategic alliances with Iran while much of the world is backing away.

It is not much of a surprise that Nicaragua's new/old president Daniel Ortega has, according to my sources who have seen the documents, already signed agreements to send a small group of "diplomats" to Tehran for intelligence training.

In addition, Nicaragua will support Iran's nuclear ambitions and other Iranian positions. In exchange, Nicaragua will get a hydroelectric plant, a motorcycle factory and other economic toys. This is all in concert with Venezuela, who, as today's Washington Post reports, Chavez is consolidating his control in Venezuela while buying support of other nations. Along with his "brother" Mahmoud Ahmadinejad, Chavez is pledging a $2 billion investment fund for the region.

Chavez and Ahmadinejad are certainly free to spend their money as they see fit. The aid is given without the stringent marco economic conditions of the loans from the World Bank and IMF. Fine.

But there are conditions nonetheless, and it is truly unbelievable to read that there are those who think this is all done from the altruistic natures of Chavez and Ahmadinejad.

The deals will include support for Iran in myriad forms. One of them is expanding Iranian influence (and hence the influence of Hezbollah and other radical Shiite groups) through intelligence penetrations, "cultural" exchanges and general access to these countries.

Iran is likely to strike similar deals with Ecuador and Bolivia. While training is fine, it is unlikely the schools to be attended are on the niceties of diplomatic ins and outs. As far as I can tell, that is not a notable forte of Iran, at least as it relates to diplomatic activities in the Western Hemisphere.

The deal with Ortega, whom I covered extensively in the 1980s and 1990s is particularly troubling because of Ortega's long history in facilitating the clandestine movement of terrorists and his willingness to grant citizenship to members of the Red Brigade, under assumed names, along with more than 100 known terrorists and criminals. (This is amply documented in reports just after Ortega left office in 1990, when the massive, illegal granting of citizenship was discovered).

But one of my most vivid memories, and most interesting stories I investigated at the time, was the massive underground bunker that Ortega and his intelligence apparatus kept in the heart of Managua. Its existence became known in 1992 when some of the explosives inside blew up, causing a fire and prompting an investigation Ortega could not control.

Inside were literally hundreds, or perhaps thousands, of false IDs, blank passports (including diplomatic), money, weapons-everything needed to aid a non-state group if needed. Much of it been used by the FMLN in El Salvador, but there were records going to international terrorist organizations around the world.

Ortega's brother Humberto was so alarmed by the explosion that he showed up in the darkness of the early morning, in his pajamas, to try to begin a cover-up.
Ultimately, what was most dangerous was not that the Sandinistas and Ortega had mounted the infrastructure, with help from the Cubans and Soviet bloc, to maintain links to like-minded groups.

It was that, two years after losing the elections and long after the Contra wars ended, no one in the Sandinista leadership, certainly not Ortega, had ever told the new government of the existence of the cache, or moved to remove either the documents or the weapons.

Ortega, through years of struggle, and later as president of a government that grew increasingly repressive, learned how to build clandestine operations as well as how to run sophisticated intelligence apparatuses. That apparatus has been largely dismantled, but the knowledge and training remain.

It is hard to imagine those going to Iran will not come back with more of the latest intelligence hardware, software and training. And it is hard to imagine that Hezbollah and the Quds Forces operatives will not enjoy the facilities that Ortega has put at the disposal of terrorist groups in his past presidency.

These describe how selective fading occurs, but you need to understand the
effect of selective fading on a peak(or envelope) detector.

>
>

But, no, it is the change in the detector that clears up the distortion. The
addition of using a phase locked signal in the product detector is that it
is 1) much easier to tune, 2) frequency locked to prevent unwanted howling
and other distortion products 3) phase locked to get the best results from
the product detector.

You'll have to be more specific, I did not see real details on the operation
of the sync detector on the page, or in the snippet above. The key thing is
how the detector works. Note the page also indicates the use of SSB mode.
The difference between SSB and synchronous modes is how the singal going to
the product detector is generated. One is phase locked, one is not.

>>A product detector has two inputs, one being the

>

> Is that a correct statement?

No, 1) you are not restoring the carrier and applying it to a peak detector. You are generating a new signal that is locked to the original carrier and applying it as one input to the product detector. 2) The readability improvement comes strictly from the product detector. This is why many just use SSB mode on their receiver.

Better, but maybe pointless as the amount of bandwidth reduction you can achieve with or without the sync detector is about the same.

There is a web page which describes the effect selective fading has on a peak/envelope detector. I can't find the link, but it does clarify the nature of the biggest contributer to distortion with selective fading.

Hope this helps.

craigm

Interesting discussion. Just out of curiosity:

Is the sync detector on the Sony 2010 the same
circuit that is used on the currently-available
Sony ICF-7600GR? Or, since that latter has a
switch-selectible USB/LSB that applies to both
the SSB and Sync selections on the tuning-method
switch, is it more like the R8's? Or something
completely different?

73, Will

4476. Night time AM IBOC - not a question of "If," it's a question of "When."

Newsgroup: rec.radio.shortwave
Date: 2007-02-23 19:26:12 UTC
From: Guerite&#65533; <aim@their.org>
Message-ID: <12tuft6i7sp5ic5@corp.supernews.com>
Source record: 106524

"A recent Arbitron/Edison Media Research study found that more than one-third of Americans are interested in HD Radio, but nearly half said they would only purchase an HD Radio if it cost $100 or less."

http://www.hdradio.com

RW: What are your thoughts about whether or how AM should go digital at night?

Mathews: I think there are problematic issues. The long and short of it is a lot of AM stations, just like FMs, have been getting reception in areas where they aren't really technically protected. . But, at some point . they're going to have to give up what they've been sort of getting for free all this time anyway, that sort of non-protected listening area. .

[TRANLATION (in the voice of Don La Fontaine): AM IBOC DXing IS FOR REAL!]

RW: Because AM has to go digital at night. .

Mathews: It's one of those things where everybody is saying, "It can't happen."
And I've said this from the beginning on HD, none of this is a question of "If," it's a question of "When."

RW: Do your listeners notice when you go digital?

Mathews: They have no concept unless they have an HD Radio.

http://www.rwonline.com/pages/s.0049/t.352.html

Just as "nsarejectnasreject@yahoo.com" has no concept.

You are right, this radio seems to have no such protection.

I did the same thing myself back then, but first blamed it on the AC adapter. Then I read about the reversed polarity issue.

I was able to trade it in for an YB-500 with a little in-between. But the YB-400 is a much better radio in my opinion...

"Dead Technology Walking"

"Deader than Microsoft's new iPod competitor Zune this holiday gift
buying season will be HD radio. Expensive. It has no rhyme nor reason
to anyone who doesn't own or operate a radio station. It's remarkable
to me that any sane radio executive can believe that HD radio will

give the industry the rebirth it needs to satisfy its prime audience
-- Wall Street investors -- I mean, listeners."

http://insidemusicmedia.blogspot.com/2006/11/dead-technology-walking.html

"In-Stat: Digital Radio Set to Take Off"

"In 2006, 73 percent of respondents to an In-Stat U.S. consumer survey
were aware of HD Radio on some level."

http://beradio.com/eyeoniboc/instat-digital-radio-set/

"Sirius, XM, and HD: Consumer interest reality check" (Alexaholic)

"While interest in satellite radio is diminishing, interest in HD
shows no signs of a pulse."

http://www.hear2.com/2007/02/sirius_xm_and_h.html#comments

This just confirms, the lack of interest for HD Radio, on Google
Trends:

http://www.google.com/trends?q=%22hd+radio%22%2C+xm%2C+sirius&ctab=0&geo=all&date=all

"Rethinking AM's Future"

"Only 175 or so AM stations have even licensed AM-HD. For a number of
reasons, quite a few have tried it and taken it off the air, or so the
anecdotal evidence suggests. Ibiquity no longer reports in its public
summaries whether a station is on the air."

http://www.rwonline.com/pages/s.0044/t.55

For now, HD Radio/IBOC is dead - authorization for nighttime AM will
never happen.

For those of you interested in doing something to
help us avoid the ultimate destruction of VOA, please
write to your representative/Congressperson/Senator
and urge them to take action to ensure that VOA
English broadcasting can continue:

VOA Says Goodbye to Uzbek, Other Tongues
Agency to Shift Resources to Audiences in Mideast, North Korea,
Somalia, Cuba

By Delphine Schrank
Washington Post Staff Writer
Friday, February 23, 2007; A13

Back home on a farm in Uzbekistan, Navbahor Imamova's mother and siblings crowd around their cranky, Soviet-made radio and tune in daily to Voice of America broadcasts in Uzbek. Though frequently scrambled by Chinese martial music, the VOA journalist said, the broadcast is her family's chief source of credible, uncensored foreign news in the authoritarian Central Asian country.

But that source is due to be silenced. For the second year running, the board overseeing the government-funded VOA has plans to wipe out news in several languages, including its flagship English-language "News Now" programming.

"This is big," said Imamova, one of seven people who put together the Uzbek service from Washington. "It's not a secret that Uzbekistan is one of the most politically oppressed countries. There's not a single outlet that can call itself independent there."

The Broadcast Board of Governors, which oversees VOA and six other government-funded international broadcasters, said this month that the cutbacks are being made in an effort to shift resources to new technology and "critical audiences" in the Middle East, North Korea, Somalia and Cuba.

"The current budget climate requires that we utilize our funds to effectively adapt to changing viewing habits and new technology, and respond to the nation's most immediate and vital national security challenges," the board said in a statement.

The board's $668.2 million budget request calls for a 3.8 percent increase from its anticipated fiscal 2007 level. The increase would fund the expansion of programming to North Korea, Iran, Afghanistan and Pakistan, as well as to the Arab-language satellite network Alhurra TV and its pop music and news counterpart, Radio Sawa.

Board spokesman Larry Hart said the decision to scrap the services largely reflects their diminishing audiences. "The world has changed, and our independent surveys show year after year that fewer and fewer people use shortwave radio," Hart said. "Now, that differs dramatically in different parts of the world. But satellite TV, FM radio and the Internet are the way of the future."

VOA employees and advocates counter that their programming is a model of open media and a crucial source of trustworthy news and information for decision makers and influential figures worldwide, a demographic that is difficult to quantify.

Since VOA's inaugural radio broadcast into Nazi Germany 65 years ago, the network has expanded into television and across the globe, and in its heyday, it carried programming in more than 50 languages. In the past few years, services were cut in 10 former Soviet bloc countries that have since joined the European Union. Other services have come and gone only to appear again.

VOA advocates and employees said that among the more dire changes being planned is elimination of "News Now," which feeds the broadcaster's 45 language services and includes reports from Washington and around the world. VOA would continue to offer Web-based English-language content, as well as English to sub-Saharan Africa and news for listeners with a limited English vocabulary.

"This is the VOA. Everything else is patterned on it. This has been our identity since 1942," said Neil Currie, a senior anchor with "News Now" and 23-year veteran of the agency. The English-language program has already suffered the effects of drastic cuts, he said, with staff whittled down in the past two years from more than 50 people to 14. Broadcasts have been reduced dramatically. On Sundays, Currie said, he is alone in the VOA newsroom putting together hours' worth of news.

"It is very hard to think of a parallel to killing the English-language services of VOA America. I can't think of an analogy absurd enough," said Sanford J. Ungar, president of Goucher College in Maryland and VOA's director from 1999 to 2001. "Would Radio Moscow stop broadcasting in Russian? Would Radio Beijing stop broadcasting in Chinese? Radio France in French? The BBC in English?"

Alan L. Heil Jr., a former deputy director of VOA and author of "Voice of America: A History," said, "We need Voice of America more than ever, and yet here we are silencing ourselves on radio." For Heil, the plan is particularly shortsighted when English is spoken by more than a quarter of the world's population and when Russia, China, Iran and al-Jazeera are expanding their TV and Internet programming in English.

Based on figures from the research group InterMedia Survey Institute, Heil calculated that total audience losses worldwide under the budget plan could run to 18.5 million listeners, with 10.5 million lost for the English broadcasts alone.

But Hart, the broadcast board's spokesman, said the priority is to use the limited funds available to target information-deprived indigenous speakers in their own languages, rather than English-speakers traveling abroad. "People who are information-deprived or who don't have access to satellite TV or who don't have hookups to the BBC or CNN -- they don't speak English, and those are the people we need to reach," he said.

Ungar, who was director of VOA when it started offering 24-hour news on the Internet, does not dispute the value of new technology. "But VOA radio is a great bargain," he said. "It costs so little to do it, and is vastly less expensive than TV."

Advocates say shortwave radio should hardly be dismissed as an anachronism. Battery-operated radios are cheap and easy to procure worldwide. Not so with satellite TVs or even Internet service, both of which can be blocked more easily and efficiently than shortwave frequencies. And unlike FM, which transmits up to 75 miles, shortwave can be broadcast over vast distances.

VOA advocates contend that the broadcast board has opted to bulldoze the agency rather than explore alternatives, including asking for greater appropriations to cover the cost of the doomed services, which come to $22 million, or about 3.5 percent of the budget.

For Imamova, the broadcaster in the Uzbek service, the plan is devastating. "VOA Uzbek is the only source of U.S. and international news in the region. It is a critical service," especially in light of a crackdown on news media in Uzbekistan, she said, adding that her comments reflect her personal views.

The Uzbek government has crippled reception of the multimedia service, which costs VOA $600,000 a year and also reaches Kazakhstan, Tajikistan and parts of China. But researcher InterMedia also notes the likelihood of a significant audience undercount because of respondent wariness in the country.

But virtually all the countries listed for eliminations are critical, Heil said. Russian President Vladimir Putin "could pull the plug on TV any day, the Balkans are something of a tinderbox with the Kosovo crisis coming to a head, and Tibetan services are absolutely critical in a country with no other independent information."

"You have to keep up with new technology, but at the same time you need a measured approach to keep your audience base," Heil added. "The stronger you are as a news gatherer, the closer you come to fulfilling VOA's mission: 'The news may be good. The news may be bad. We shall tell you the truth.' "

"HD Radio Perceptual Study - Awareness & Interest
2007 Units Sold Estimates Reduced"

"Based on the results of this study and analysis performed by Bridge
Ratings, we have reduced our original projections for full year 2007
HD radio sales from 2.1 million total HD radio units sold to 1.5

million. Our models anticipate HD Radio market penetration to grow slowly through 2010 when we optimistically project 12 million sold (U.S.)."

http://www.bridgeratings.com/press_1.17.07.HDPercep.htm

Since, only a few tens-of-thousands of HD radios have been sold, even Bridge Ratings still over-projects the number of HD radios sold, by a long-shot. No doubt, due to lousy reception and poor/lack of HD channel programming, many have been returned. See, you and David Eduardo are losers !

I have been researching/posting on this subject for a year, and have a
zillion links set up, and know exactly how and where to find
information, to counter little punks like you and David Edurado ! :-)

"Digital radio in Canada"

http://americanbandscan.blogspot.com/2006/12/digital-radio-in-canada.html

And, since I am in Maryland, worst-case-scenario, I can AM DX to
Canada, because digital radio has failed to gain consumer interest, as

in the US, but Canada will not put up with interference. HD/IBOC will eventually go the way of the failed AM Stereo of the 1980s - no one cares about terrestrial radio, because it is just a convenience, not entertainment such as, iPods/MP3s, gaming-systems, cell phones, the Internet, etc...

"In-Stat: Digital Radio Set to Take Off"

"In 2006, 73 percent of respondents to an In-Stat U.S. consumer survey
were aware of HD Radio on some level."

http://beradio.com/eyeoniboc/instat-digital-radio-set/

"Sirius, XM, and HD: Consumer interest reality check" (Alexaholic)

"While interest in satellite radio is diminishing, interest in HD
shows no signs of a pulse."

http://www.hear2.com/2007/02/sirius_xm_and_h.html#comments

This just confirms, the lack of interest for HD Radio, on Google
Trends:

http://www.google.com/trends?q=%22hd+radio%22%2C+xm%2C+sirius&ctab=0&geo=all&date=all

For now, HD Radio/IBOC is dead.

Just because I can doesn't mean I do.Last night,before daylight,the divorced woman next door to me,her dog got loose from the tie out line she was using which is hooked around a tree in her back yard.I have been going outside every once in a while,hopeing her dog might show up.I guess somebody picked up her dog.I told her to check the animal shelters around here every day.Dogs and cats are just like family to some people. cuhulin

Same reason other ethnic minorities can make fun of white people on TV where as if we do we're in jail.

Why would anyone want to watch that second rate crap anyway? Except for the titty shows, they're good.

Ok, thanks . Unbelievable that this radio didn't have such protection
... all it would have taken is a diode and maybe a couple of other
components. You say you were able to "trade" it ... were you able to get
it back working again?

Will, they both use custom Sony ICs. However, they are different designs.

> Or, since that latter has a
> switch-selectible USB/LSB that applies to both

Without details on the internals of the Sony IC, I don't know. I have been unable to find specific information on the web.

Given their behavior, I would expect that Sony design to be similar to Drake's. The phasing method of side band selection has been around for years.

> are doing so and why you are doing so.

Carl, did you actually -read- what the ARRL said? Listed below is a
direct quote from their web site...

> Amateur Radio Enters a New Era (Feb 23, 2007) -- A new Amateur Radio
> Service regime now is in place. The requirement to demonstrate Morse
> code proficiency to gain HF privileges officially disappeared from
> the FCC's Part 97 rules today at 12:01 AM Eastern Time. At the same
> time, some 200,000 Technician licensees without Morse code exam
> credit acquired HF privileges equivalent to those available to Novice
> licensees. The League is marking the occasion with a W1AW special
> event aimed at welcoming newcomers to the HF bands.

1) I don't see the word 'celebrate' anywhere; however, they *are*
"welcoming newcomers to the HF bands". That doesn't seem too unreasonable.

The ARRL is just accepting the reality of
the situation--the new *FCC* (not ARRL) rules.

2) If due to *FCC* action (beyond the control of
the ARRL), the only new hams coming in to the hobby are going to be
no-code hams, why shouldn't the ARRL welcome them? Should anybody new
that wants to be a ham be shunned by the ARRL because of an *FCC* rule?

3) Read point two above again. This was an *FCC action*, beyond the
control of the ARRL; the ARRL can either welcome the newbies or put
their tail between their legs and slink off into the night...
Unfortunately, if they did do that, I don't know of any organization
ready to take the ARRL's place--do you?

4) Why boycott the QST advertisers because of an *FCC* rule change?
Maybe your time would be better spent boycotting the FCC.

Sorry 'Carl without a Call', you're way off the beam on this one.

Carter, K8VT
20 wpm Extra
Proud ARRL member since 1959

P.S. For years, people bitched that the ARRL was run by a bunch of
pro-code geezers; now you say the ARRL is 'celebrating' the end of CW.
Sorry, you can't have it both ways...

> > .
> > . .
>
> Since english language programming dominates the broadcast bands,
> please tell us specifically which programming you would like carried
> as a subcarrier that is not carried elsewhere. Maybe SSL classes?

El Caminolito,

1 - While English Language Programming does 'dominate'
TV in many areas : In some areas Spanish Language
Programming is the 'most-watched'. It is in these areas
that Spanish Language Broadcaster should use the SAP
Channel and provide an English Language simulcast of
the programming.

2 - Every Spanish Language Program that is Broadcasted
should be on the SAp in English. But the process could
be 'Phased-in-Over-Time" :
First - The Prime-Time Family Hours 7-10 PM
- - - Especially the Telenovelas {Novelas}
NOVELAS => http://en.wikipedia.org/wiki/Telenovela
WORLD TV => http://www.telenovelas.gr/worldtv/english.htm
Example the Spanish Language "Betty La Fea" has
become the English Language "Ugly Betty"
Second - All the News and Information Shows
Third - All Children's Programming
Fourth - All Daytime Programming : Talk Shows,
Game Shows, ETC.
Fifth - All Movies especially the American Movies which
were originally in English an already have an English
Language Sound Track. (What Could Be Easier !)

3 - "SSL" - ¡ Claro Sí !
SSL = Spanish as a Second Language (SSL) Classes

It's about Greater Programming Diversity {Leading to
Cultural Understanding} and Equal Access to all forms
of Broadcast Media for English-Only-Speakers in Areas
where they are in-fact a Minority to assure that they
are not being marginalized because of their Limitations
from 'only' being able to Speak a single Language.
{Human Rights For All - Including English-Only-Speakers}

It's About Fairness and Equality For All Peoples . . .

¡ Entiendes Mendez ! ¿O Te Explico Federico? .

i know - it's better that i should learn spanish ~ El RHF Olé !
.
.
. .

Good quality copy.
Here in San Diego most of what I copy is much noisier.
What is your location? (Southeast US I'm guessing.)
What was the frequency and time of reception?
Did you use software that came with the rx320?

The rx320 looks like pretty nice radio. A clever and
good quality design.

SDR technology only has leverage at the IF and after.
The ADC is just one component of a system.
A receiver is not based on an ADC.

this is the type of idiocy racism breeds. moonlight, a racist to the core, can't believe arab muslims would invent a genocidal fascist ideology, so he places the blame on the US.

he can't read. he doesn't know history. he's never heard of sayyid qutb, the muslim brotherhood, bin laden's 'letter to america', or any other document regarding the current situation.

so he mouths the mindless trash that fills the empty heads of the far left.

in another age he'd be an ermine garbed cardinal burning the witches. today he's got another fundie ideology to believe it.

Moonlight Mile wrote:
>
> The people who were the driving force behind the Revolutionary War (you know,
> against the British) were mostly wealthy white slave-owners

well, let's see...i guess he doesn't know it was the portugese who
started the slave trade in 1404...doesn't know european xtians held
slaves since the time constantine made it the state religion...

who thought that
> all men, except black men and any other ethnic group they chose to exclude, were
> equal.

guess he doesn't know that in many european countries, women didn't
get the right to vote until the 19th or 20th century...that black men
were not freed from slavery until about 60 years before americans
freed them in the US...

> Failure to repay such debts often resulted in imprisonment in debtor's prisons.''''

yes, and i suppose there were no debtor's prisons in
europe...why...none at all. no injustice...no murderous french
revolution. no religious wars...europe was always a peaceful bastion
of equal rights for all...
>
> Manifest Destiny was America's policy for justifying the taking land that did
> not belong to us.

and colonialism was the europeans' justification for doing exactly the
same.

American Indians were slaughtered

has he ever heard of belgium? the massacres king leopold fostered in
the congo? the centuries of racist colonialism that STILL has africa
screwed up?

no...he hasn't. to him, there was no evil at all until 1776.
>
> The majority of Mexicans believe that the Southwest Territories still _belong_
> to Mexico. They are correct. Don't even get the idea that Mexicans and people of
> South America love the U.S. They hate us for what we've done to them (esp. after
> 1950). They come here because we control the wealth.

ah, the cliches keep rolling. no one believes anyone loves the US,
least of all racist far left ideologues like this idiot. he thinks
only the US is evil...everyone else is perfect.

>
> Various skirmishes throughout the 1800s with the badly outnumbered and
> ill-equipped American Indians--we we quite happy to attack villages and kill
> very man, woman and child in an Indian village.

and the massacre at amritsar? the occupation of the moluccan islands?
of burma? of china?

oh. he's never head of them. since they didn't involve the US, they
must not have happened.

> > .
>
> I have no doubt that I've missed many mini-wars, battles, skirmishes, etc. up
> until this point. BUT THE PATTERN HAS ALREADY EMERGED..the U.S. goes to war
> simply to get what it wants. Diplomacy is not an option.

that's true. no other country in history ever went to war for
greed...except america...

what a remarkable discovery.
>
> WWI? I have no idea why we got involved

he finally speaks the truth.
>
> Well WWII. We and our "allies", excepting Russia, stood by while Russia fought
> Nazi Germany mostly on its own.

ROFLMAO!! the idiot doesn't even know that the UK was fighting germany
years before germany invaded russia!!

such is his grasp of history...

Churchill said, more or less, less the Germans
> kill as many Russians as possible, let the Russians kill as many Germans as
> possible, but we can't let the Germans win. Eventually the western powers got
> dragged into WWII, but it took Pearl Harbor and the Japan/Germany alliance to
> get the interest of the U.S. Russia suffered as no other country.

notice his glossing over history? his defense of the genocidal soviet
regime that killed as many russians as the germans did? notice how he
doesn't mention that? he weeps for the native americans and defends a
regime that murdered as many people as the nazis, americans and
european colonialists put together

such is his understanding of history.

At the end of WWII, the U.S. started
> fighting with _Japanese_ soldiers as allies [weren't we fighting against the
> Japanese in WWII] in China against Chinese Communists,

ah, yes, the wonderful chinese communists. they murdered 50,000,000
chinese. but he's a racist so doesn't particularly regard the chinese
as human. doesn't care that communism, like naziism, is a murderous

genocidal ideology
>
> The Tokyo fire bombings were horrendous.

so was harbin. so was nanking. but, you see, the japanese murdered
chinese and did nazi like experiments on them. BUT, since the victims
were chinese, he, being a racist, doesn't care.
>
> The short story is that the U.S. turned on our own allies after WWI and WII
> simply because they were Communist.

the british were commies? really?

and what of the germans and japanese...we occupied them and today they
are among the richest democracies in the world

he doesn't seem to know that, either.

There system of government and economics
> were different from ours and we couldn't permit that. We started the Cold War.

no...the martians did.

i suggest he ask the poles, the czechs, the estonians what they
thought of their wonderful soviet friends....
>
> Undeclared wars (the only kind) after WWII, Korea,

ah, yes, korea...the UN fought that one. but he thinks history began
only in 1776...

Viet Nam, Haiti, Grenada,
> Panama, Iraq I (immediately after we told Iraq we had no interest in Arab-Arab
> conflicts--April Glaspie, James Baker),

ROFLMAO more racism. can't handle the idea that arabs could be as
murderous as americans...the bigotry of low expectations...

>> Afghanistan,

guess he doesn't know afghanistan attacked us...

Iraq II. Is Iran and/or
> North Korea next? Stay tuned! it's well past time for all the peoples of
> Afghanistan and Iraq, men, women and children to attack every possible American
> or coalition soldier. Many will die, but they will be rid of "the great satan",
> the cancer that infests this planet.

one wonders why this hoary, cliche ridden sloth doesn't move to the
paradise of saudi arabia.

> >
> Look. I have a lot more material. You could find this information yourself. That
> you don't know any of this suggests that you are a lazy piss-ant who does not
> deserve the right to vote.

says the racist hater of chinese, arabs and every other human on the
planet.

>
> Religion=ignorance! Belief in God = Mental Disorder! The most religious
> developed country in the world beset by the highest incidence of social problems

and here's proof of his bigotry. arab muslims are the most religious
people on the planet yet he says zip about THEIR govts at all...
>
> Noriega (Panama) and Saddam (Iraq) met the same fate as any other of our allies
> who have outlived their usefulness and become (too much of) an embarrassment
> to the U.S.

when's the last time we invaded canada? the UK? we liberated france,
germany, belgium, japan, italy, and they are all democracies today.

what a one sided view of history...

>
> Do your own research!
>
> Holy smokes! I've read other posts in this thread and it seems I'm amongst
> people much like me...anarchists!

no...you're a fundamentalist. you have your religion...anti
americanism. you have your fundamentalist belief...the US is always at
fault.

And in the rec.radio.shortwave NG. Bet you've
> all been listening to radio Havana--I do.

yes, cuba is so free that millions have escaped from the place...

>Without details on the internals of the Sony IC, I don't know.

You'll find some information on the Sony ICF-2010 sync circuit here:

http://user.netonecom.net/~swordman/Radio/ShortWaveRadio.htm
An 8-page article called "Synchronous Detection of AM Signals:
What is it and how does it work?" appeared in the September, 1992
QEX magazine. It has several pages of the theory of amplitude
modulation and then goes into the demodulation. The circuit uses
the Sony CX-857 stereo decoder and PSN phasing amplifier chips
that are used in the "famous" Sony ICF-2010 synchronous detector.
The author of the article, Mike Gruber WA1SVF, an ARRL Laboratory
EMC/RFI Engineer, reports that Steve Johnston, WD8DAS sells a kit
for building it and has more information on his web site at
http://www.qsl.net/wd8das/syncinfo.txt. WD8DAS also has a copy of
a 2-page review from the October, 1994 issue of Electric Radio
magazine. I have received permission from the ARRL to post a
scanned copy of the article.

Reprinted with permission from September 1992 QEX; copyright ARRL.
Here's the link QEX 09/1992. (99k)

David Eduardo has claimed in the past to have held the Ecuadorian call HC1DG... I am still unable to come up with anyone who shows that call in a copy of the Callbook. Perhaps he was a Tech-Lite-In-The-Loafers and they didn't list it.

> Welcome to the hobby. :-)

Well, what I want to do, is mostly listen at home, but maybe do some
listening portably. I need a radio that can deal with some roughness
although I am always very careful with stuff, but with mobile
sometimes you just can't help it. I want also to really extend my
listening experience if I can help it. I want to hear as much as I can

if I can. Don't know how far, I wanna listen though, even if I pull in Russia or something, I can't speak it, lol.

Thank you all for all your suggestions. I might end up getting the Sony but I think I am going to look at reviews for the other radios just in case, since I gotta a little bit of time before I actually order any radio.

"In-Stat: Digital Radio Set to Take Off"

"In 2006, 73 percent of respondents to an In-Stat U.S. consumer survey
were aware of HD Radio on some level."

http://beradio.com/eyeoniboc/instat-digital-radio-set/

"Sirius, XM, and HD: Consumer interest reality check" (Alexaholic)

"While interest in satellite radio is diminishing, interest in HD
shows no signs of a pulse."

http://www.hear2.com/2007/02/sirius_xm_and_h.html#comments

This just confirms, the lack of interest for HD Radio, on Google
Trends:

http://www.google.com/trends?q=%22hd+radio%22%2C+xm%2C+sirius&ctab=0&geo=all&date=all

For now, HD Radio/IBOC is dead.

= = = Moonlight Mile <MoonlightM...@somewhere.net> Writes :

Well, you caught me. Our strengths, other than military and which is
hardly
virtuous, are very difficult to find. Virtues? I'm drawing a blank on
this also.
The American people are, as a group, selfish, self-absorbed,
narcissistic,
arrogant and ignorant. Most simply haven't a clue. Belief in God and
strong
religious beliefs are not the solution, they _are the problem_.

The people who were the driving force behind the Revolutionary War
(you know,
against the British) were mostly wealthy white slave-owners who
thought that

all men, except black men and any other ethnic group they chose to exclude, were
equal. These wealthy men simply did not want to pay taxes to Britain, though
most of the cost of the French and Indian Wars as well as the protection from
pirates, etc. of ships to/from the colonies was borne by Britain. Less than 1/3
of the population in the colonies favored war with Britain. After the
revolutionary war, we had Shays' Rebellion after the debt from the Revolutionary
War ultimately trickled down to individuals, in large part to small farmers.
Failure to repay such debts often resulted in imprisonment in debtor's prisons.
You may have seen the movie called "The Patriot" with Mel Gibson starring
as...well, Mel Gibson. In that movie, blacks were offered freedom if they fought
with the colonists for 6 months. The is NOT true. It was the British who made
that offer, and they kept their word, maybe, kinda, a little, sometimes.

Manifest Destiny was America's policy for justifying the taking land that did
not belong to us. American Indians were slaughtered and every treaty we made
with them was broken by white folk. Oh, as a pleasant aside, slavery continued.

The Louisiana Purchase was a "make them an offer they can't refuse" kind of
deal. Sell it to us at the price we will pay or we will take it.

Then there was the was of 1812, a war that lasted two years. The United States
declared War on Great Britain on June 12, 1812.

The majority of Mexicans believe that the Southwest Territories still _belong_
to Mexico. They are correct. Don't even get the idea that Mexicans and people of
South America love the U.S. They hate us for what we've done to them (esp. after
1950). They come here because we control the wealth.

Various skirmishes throughout the 1800s with the badly outnumbered and
ill-equipped American Indians--we we quite happy to attack villages and kill
very man, woman and child in an Indian village.

The American Civil War was fought over the cultural and economic differences
between north and south. The purpose was not to end slavery, though it did have
that effect. It did not give backs civil rights, but they were amongst the
oppressed "free".

Then there was The Spanish American War, starting in 1898. The U.S. was involved
simply because we hoped to benefit from it. This was not an altruistic
endeavor.

I have no doubt that I've missed many mini-wars, battles, skirmishes, etc. up
until this point. BUT THE PATTERN HAS ALREADY EMERGED..the U.S. goes to war
simply to get what it wants. Diplomacy is not an option.

WWI? I have no idea why we got involved but I have no doubt that it was reasons
of self-aggrandizement. In 1918, the U.S. had between 10,000 and 15,000 soldiers
in Russia, our ally in WWI. Russia was trying to put itself back together after
crushing wars: WWI and a Civil War. We had allies and we kindly and gently
slaughtered Red Soviets as best we could, but we still lost. In this endeavor,
we were the terroists.

What went on between WWI and WWII. Hell? I don't know. I suppose the depression
was a great distraction, but I'd be very surprised if the U.S. was not busy
battering and attempting to economically take over various South American
countries. The U.S. and U.S. companies do not negoiate treaties or agreements
with other countries that do not disproportionately benefit the U.S. Like I said
the pattern had been established. The U.S. had become a terrorist nation.

Well WWII. We and our "allies", excepting Russia, stood by while Russia fought
Nazi Germany mostly on its own. Churchill said, more or less, less the Germans
kill as many Russians as possible, let the Russians kill as many Germans as
possible, but we can't let the Germans win. Eventually the western powers got
dragged into WWII, but it took Pearl Harbor and the Japan/Germany

alliance to
get the interest of the U.S. Russia suffered as no other country. The
best
estimate for loss of lives in Russia stands at about 17 million
people...they
starved, froze, died in battle, were murdered. They nearly lost, but
they kept
fighting. By comparison, the western front was a picnic. Is it any
wonder that
the Soviet Union was created, that territories they captured were held
by them.
They suffered horrific losses in WWI and WWII, not just lives but
lives that
would have been and their infra-structure. At the end of WWII, the
U.S. started
fighting with _Japanese_ soldiers as allies [weren't we fighting
against the
Japanese in WWII] in China against Chinese Communists, our allies in
WWII who
did a lot to support us including the rescue of American pilots downed
in China
during WWII...their wounds were treated and they were returned to us
and The
Communists would accept no reward. After WWII, we supported the
Chinese
Nationalists, who did nothing to help us in WWII.

The Tokyo fire bombings were horrendous. The Hydrogen bombs were
unnecessary
since Japan had been trying to surrender for some time. The H-bombs
were dropped
to intimidate Russia, not out of necessity to win the war.

The short story is that the U.S. turned on our own allies after WWI
and WII
simply because they were Communist. There system of government and
economics
were different from ours and we couldn't permit that. We started the
Cold War.
We may think we have won the Cold War and that we've reached "the end
of
history" as some moron put it.

After WWII. I'm getting tired. But I'll add some more.

Undeclared wars (the only kind) after WWII, Korea, Viet Nam, Haiti,
Grenada,
Panama, Iraq I (immediately after we told Iraq we had no interest in
Arab-Arab
conflicts--April Glaspie, James Baker), Afghanistan, Iraq II. Is Iran
and/or

North Korea next? Stay tuned! it's well past time for all the peoples of
Afghanistan and Iraq, men, women and children to attack every possible American
or coalition soldier. Many will die, but they will be rid of "the great satan",
the cancer that infests this planet.

Ronald Wilson Reagon (666 because each name had 6 letters, was the Anti-
Christ--hey, I don't make the rules. Google on "666". George W. Bush. Both men
with serious, dangerous mental disorders. Both were or are delusional and out of
touch with reality. Reagan had the Iran-Contra scandal and should have been
impeached. PLanes went down to Central America with weapons and money; flew back
with cocaine. Oliver North's diary shows that he knew about this. I'm not
anti-drug (I'm neutral on drugs), but if I have to live with insane anti-drug
laws, I think the CIA, Oliver North, and other government agencies have to live
with them as well. I would go to jail; Oliver North is a hero for the
conservatives and walks away a millionaire for breaking laws and far worse
behavior than I would be allowed. I'll point out that the technology for, if not
the actual chemical and biological weapons used by Iraq against Kurds, Shiites,
and Iran's soldiers were sold by private U.S. countries with U.S. Dept. of
Commerce approval. And we knew damn well how those weapons were going to be
used. READ BLUM'S BOOK!!!!!!!!!!!!!!!!!!!

Right wing death squads in Central and South America; trained at the School of
The Americas in the U.S. in the fine arts of torture, subversion, destruction.
The U.S. funds them as well.

Look. I have a lot more material. You could find this information yourself. That
you don't know any of this suggests that you are a lazy piss-ant who does not
deserve the right to vote.

Religion=ignorance! Belief in God = Mental Disorder! The most religious

developed country in the world beset by the highest incidence of social problems
and most types of criminal activity of any developed country in the world. And
we have the highest incarceration rate of _any_ country in the world. We are not
free. We are not noble. We are not virtuous. But, we keep over-spending on the
military so we don't have to be free, virtuous or noble.

Noriega (Panama) and Saddam (Iraq) met the same fate as any other of our allies
who have outlived their usefulness and become (too much of) an embarrassment
to the U.S.

Do your own research!

Holy smokes! I've read other posts in this thread and it seems I'm amongst
people much like me...anarchists! And in the rec.radio.shortwave NG. Bet you've
all been listening to radio Havana--I do. Occasionally, I get SW from Moscow and
Japan. Too bad Al-Jazeera can't get on broadcast AM here in the states. So much
for "freedom of speech"! A-J audio and perhaps video is on the Internet I think.
Still have to ground my antenna. Soon!

MM

world. And
we have the highest incarceration rate of _any_ country in the world.
We are not
free. We are not noble. We are not virtuous. But, we keep over-
spending on the
military so we don't have to be free, virtuous or noble.

Noriega (Panama) and Saddam (Iraq) met the same fate as any other of
our allies
who have outlived their usefulness and become (too much of) an
embarrassment
to the U.S.

Do your own research!

Holy smokes! I've read other posts in this thread and it seems I'm
amongst
people much like me...anarchists! And in the rec.radio.shortwave NG.
Bet you've
all been listening to radio Havana--I do. Occasionally, I get SW from
Moscow and
Japan. Too bad Al-Jazeera can't get on broadcast AM here in the
states. So much
for "freedom of speech"! A-J audio and perhaps video is on the
Internet I think.
Still have to ground my antenna. Soon!

MM

Message-ID: <d7m0u2ts5p2p5ktvbjqg8fj48gemv2073e@entropy.org>
Source record: 106631

The 666 Revelations junk probably refers to Hebrew-Aramaic or Greek numerology in which the first 10 letters are 1-10, the 11th letter is 20, 12th is 30, ... up to 100, 200, ...

So you pay Rebbe Nissim ben Nissim (Nissim = miracles in Hebrew) 52 rubles and you will have a son. Or at least you will be 52 rubles poorer.

(Son - ben which is spelled bet-nun and bet=2 and nun=50. The Hebrew aleph-bet doesn't have explicit vowels.)

Traditionally, Jews give charity in multiples of 18 units because Khet-Yud (8-10) is khai is life.

Of course, trying to prove that a politician you don't like has the number 666 has been going on for just about as long as Revelations has been aroune.

Didn't Reagan pay his city to have his house renumbered from 666?

There is no demonstrable demand for english language versions of
hispanic, chinese and russian programming. None. Most cable systems
have on their basic service over 100 channels of english language
programming avaiable now and over 500 channels for those with a lot of
time on their hands. Why spend the money on such programming where
there is no demand.

4587. A skeptic's take on man-made global warming

Newsgroup: rec.radio.shortwave
Date: 2007-02-24 16:36:39 UTC
From: Guerite&#65533; <aim@their.org>

Source record: 106636
Cross-posted to: rec.radio.shortwave,us.politics

A skeptic's take on man-made global warming
By Bill Steigerwald

Timothy Ball is no wishy-washy skeptic of global warming. The Canadian climatologist, who has a Ph.D. in climatology from the University of London and taught at the University of Winnipeg for 28 years, says that the widely propagated "fact" that humans are contributing to global warming is the "greatest deception in the history of science."

Ball has made no friends among global warming alarmists by saying that global warming is caused by the sun, that global warming will be good for us and that the Kyoto Protocol "is a political solution to a nonexistent problem without scientific justification."

Needless to say, Ball strongly disagrees with the findings of the latest report from the United Nations' Intergovernmental Panel on Climate Change, which on Feb. 2 concluded that it is "very likely" that global warming is the result of human activity.

I talked to Ball by phone on Feb. 6 from his home on Victoria Island, British Columbia, which the good-humored scientist likes to point out was connected to the mainland 8,000 years ago when the sea level was 500 feet lower.

Q: The mainstream media would have us believe that the science of global warming is now settled by the latest IPCC report. Is it true?

A: No. It's absolutely false. As soon as people start saying something's settled, it's usually that they don't want to talk about it anymore. They don't want anybody to dig any deeper. It's very, very far from settled. In fact, that's the real problem. We haven't been able to get all of the facts on the table. The IPCC is a purely political setup.

There was a large group of people, the political people, who wanted the report to be more harum-scarum than it actually is. In fact, the report is quite a considerable step down from the previous reports. For example, they have reduced the potential temperature rise and they've reduced the sea level increase and a whole bunch of other things. Part of it is because they know so many people will be watching the report this time.

Q: Why should we be leery of the IPCC's report -- or the summary of the report?

A: Well, because the report is the end product of a political agenda, and it is the political agenda of both the extreme environmentalists who of course think we are destroying the world. But it's also the political agenda of a

group of people ... who believe that industrialization and development and capitalism and the Western way is a terrible system and they want to bring it down.

They couldn't do it by attacking energy because they know that would get the public's back up very quickly. ... The vehicle they chose was CO2, because that's the byproduct of industry and fossil-fuel burning, which of course drives the whole thing. They think, "If we can show that that is destroying the planet, then it allows us to control." Unfortunately, you've got a bunch of scientists who have this political agenda as well, and they have effectively controlled the IPCC process.

Q: You always hear the argument that the IPCC has several thousand scientists -- how can you not accept what they say?

A: The answer, first of all, is that consensus is not a scientific fact. The other thing is, you look at the degree to which they have controlled the whole IPCC process. For example, who are the lead authors? Who are the scientists who sit on the summary panel with the politicians to make sure that they get their view in? S You've got this incestuous little group that is controlling the whole process both through their publications and the IPCC. I'm not a conspiracy theorist and I hate being even pushed toward that, but I think there is a consensus conspiracy that's going on.

Q: What is your strongest or best argument that GW is not "very likely" to be caused by SUVs and Al Gore's private planes?

A: I guess the best argument is that global warming has occurred, but it began in 1680, if you want to take the latest long-term warming, and the climate changes all the time. It began in 1680, in the middle of what's called "The Little Ice Age" when there was three feet of ice on the Thames River in London. And the demand for furs of course drove the fur trade. The world has warmed up until recently, and that warming trend doesn't fit with the CO2 record at all; it fits with the sun-spot data. Of course they are ignoring the sun because they want to focus on CO2.

The other thing that you are seeing going on is that they have switched from talking about global warming to talking about climate change. The reason for that is since 1998 the global temperature has gone down -- only marginally, but it has gone down. In the meantime, of course, CO2 has increased in the atmosphere and human production has increased. So you've got what Huxley called the great bane of science -- "a lovely hypothesis destroyed by an ugly fact." So by switching to climate change, it allows them to point at any weather event -- whether it's warming, cooling, hotter, dryer, wetter, windier, whatever -- and say it is due to humans. Of course, it's absolutely rubbish.

Q: What is the most exaggerated and unnecessary worry about global warming or climate change?

A: I think the fact that it is presented as all negative. Of course, it's the one thing they focus on because the public, with the huge well of common sense that is out there, would sort of say, "Well, I don't understand the

science, but, gee, I wouldn't mind a warmer world, especially if I was living in Canada or Russia." They have to touch something in the warming that becomes a very big negative for the people, and so they focus on, "Oh, the glaciers are going to melt and the sea levels are going to rise." In fact, there are an awful lot of positive things. For example, longer frost-free seasons across many of the northern countries, less energy used because you don't need to keep your houses warm in the winter.

Q: Is the globe warming and what is the cause?

A: Yeah, the world has been warming since 1680 and the cause is changes in the sun. But in their computer models they hardly talk about the sun at all and in the IPCC summary for policy-makers they don't talk about the sun at all. And of course, if they put the sun into their formula in their computer models, it swamps out the human portion of CO2, so they can't possibly do that.

Q: Is the rising CO2 level the cause of global warming or the result of it?

A: That's a very good question because in the theory the claim is that if CO2 goes up, temperature will go up. The ice core record of the last 420,000 years shows exactly the opposite. It shows that the temperature changes before the CO2. So the fundamental assumption of the theory is wrong. That means the theory is wrong. ... But the theory that human CO2 would lead to runaway global warming became a fact right away, and scientists like myself who dared to question it were immediately accused of being paid by the oil companies or didn't care about the children or the future or anything else.

Q: Have you ever accepted money from an oil company?

A: No. No. I wish I did get some. I wouldn't have to drive a '92 car and live in a leaky apartment bloc.

Q: Why are sea levels rising and should we worry?

A: Sea levels have been rising for the last 10,000 years. In fact, 8,000 years ago, sea level was almost 500 feet lower than it is today. It's been rising gradually over that time. It's risen very slightly in the modern record, but it has risen no more rapidly than it has in the last 8,000 years. One of the factors that people forget is that most of the ice is already in the ocean, and so if you understand Archimedes' Principle, when that ice melts it simply replaces the space that the ice occupied -- even if the ice caps melt completely. What they do is they say if we estimate the volume of water in Antarctica and Greenland, then we add that to the existing ocean level. But that's not the way it works at all. But it does work for panic and for sea-level rises of 20 feet, like Gore claims.

Q: Why are the sea levels rising, just because we are in a warming period?

A: Yes. We are in an inter-glacial. Just 22,000 years ago, which is what some people can get their minds around, Canada and parts of the northern U.S. were covered with an ice sheet larger than the current Antarctic ice sheet. That ice sheet was over a mile thick in central Canada. All of that

ice melted in 5,000 years. There was another ice sheet over Europe and a couple more in Asia. As that ice has melted, it's run back into the oceans and of course that's what's filled up the oceans. But if you drilled down in Antarctica, you go down almost 8,000 feet below sea level. That ice below sea level, if it melts, is not going to raise sea level.

Q: Is there any aspect of global warming alarmism that you are worried about?

A: There are a couple of very minor things. I'm interested in and need more research done on commercial jet aircraft flying in the stratosphere. The research that's been done so far says no, it's not an issue, but I think the jury is out on that still. The other concern I have is that we're totally preparing for warming. The whole world is preparing for warming, but I mentioned that we have been cooling since 1998 and the climate scientists that I respected -- particularly the Russians and Chinese -- are predicting that we're going to be much, much cooler by 2030. So we've got completely the wrong adaptive strategy.

Q: Is it not inevitable that we will have another ice age?

A: Yes, I think there is another ice age coming, because the major causes of the ice ages are changes in the orbit of the Earth around the sun and changes in the tilt of the Earth. Those are things we've known about for 150 years.

Q: If someone asked you where he should go to get a good antidote on the mainstream media's spin on global warming, where should he go?

A: There are three Web sites I have some respect for. One is the one I helped set up by a group of very frustrated professional scientists who are retired. That's called Friendsofscience.org. It has deliberately tried to focus on the science only. The second site that I think provides the science side of it very, very well is CO2Science.org, and that's run by Sherwood Idso, who is the world expert on the relationship between plant growth and CO2. The third, which is a little more irreverent and maybe still slightly on the technical side for the general public, is JunkScience.com.

Q: If you had to calm the fears of a small grandchild or a student about the threat of global warming, what would you tell him?

A: First of all, I probably wouldn't tell him anything. As I tell audiences, the minute somebody starts saying "Oh, the children are going to die and the grandchildren are going to have no future," they have now played the emotional and fear card. Just like in the U.S., it's almost like the race card. It's not to say that it isn't valid in some cases. But the minute you play that card, you are now taking the issues and the debates out of the rational and logical and reasonable and sensible and calm into the emotional and hysterical.

So I wouldn't raise these kinds of fear with the children. What I would do with my children and grandchildren is what I'm trying to do with the public and say, "Look, here's the other side of the story. Make sure you get all of

the information before you start running off and screaming 'wolf, wolf,
wolf.'"

"In-Stat: Digital Radio Set to Take Off"

"In 2006, 73 percent of respondents to an In-Stat U.S. consumer
survey
were aware of HD Radio on some level."

http://beradio.com/eyeoniboc/instat-digital-radio-set/

"Sirius, XM, and HD: Consumer interest reality check" (Alexaholic)

"While interest in satellite radio is diminishing, interest in HD
shows no signs of a pulse."

http://www.hear2.com/2007/02/sirius_xm_and_h.html#comments

This just confirms, the lack of interest for HD Radio, on Google
Trends:

http://www.google.com/trends?q=%22hd+radio%22%2C+xm%2C+sirius&ctab=0&...

For now, HD Radio/IBOC is dead.

I see. Which "failed argument" of Teddy or Gen. Patton are you referring to?

I am saying that when one goes from arguing to defend a point to profanity
that they have run out of debate points and have, therefore, lost the
argument. What I said is not either for or against cussing... just a
suggestion that when cussing replaces logic, an argument has been lost.

Please try to work on your reading comprehension. You failed totally to
observe the meaning of "... in a failed argument" in my statement, and
provided a response that was totally irrelevant and stupid.

Of course not, you being a racist red neck and all! Hopefully, most of here have a passing acquaintance, at least, with a decent American and therefore recognise that "dxAce" is not typical and mostly not at all well.

Most Americans and Canadians are decent human beings and their is no need for people like "dxAce" to be jealous of his northern neighbours. What he could do is spend some time healing himself.

I don't think Edweenie even quite understands what profanity is.

By now though, he certainly understands pathological.

You have an obsession with the fact that I quit high school to run a
business that grew into a major group bradcaster. Maybe you continued your
education in the normal way, and did not achieve any success. I am not
responsible for your attacks of jealousy.

Actually, I do. Not all profane terms or words refer to a deity; in
Christian society the bible is generally interpreted to condemn certain
sexual practices and to engage in them, is, therefore profane; the act is
interpreted to be an offense to God.

The RX-320 is a great radio, in my opinion it runs circles around many more expensive receivers I have owned. Only drawback is the PC noise but once you isolate it from the noise, you got a great radio. I had one of these a few years ago and I am in the market for one again.

Well damn! It's funny that Masiela Lusha was born in Albania of all places.

With at least 12 million illegals, mostly Hispanics, running amok here in the USofA one would think that one might be found to play the daughter on the George Lopez silly TV show.

Source record: 106574

Well, this "dumbass Canuck" is damn glad that Canada is next to the United States. I can easily guess how different things would have been had Canada existed on the border of Russia, or China. After promising that free elections would be held in Easter Europe at Yalta, Stalin went ahead and broke his promise. Typical Communism at work. He also promised that free elections would be held in North Korea. We all know what happened there. Then we had the Hungarian Revolt of '56, followed by the Prague Spring of '68. "Workers of the world unite, you have nothing to lose but your chains." Well, chains is exactly what they end up with. If they get caught complaining about their government, or even worse criticizing the "Great Leader", they disappear into the penal system.
I like being able to complain about my government. I like being able to call my Prime Minister a jerk and an idiot. I like the opportunity to vote for something and someone different if I so choose. And no one is going to come and arrest me.
Anyone ever give any thought to Tibet? What happened there? I suppose that the Tibetans "invited" the red Chinese to invade their country to "get rid of Western infection". Ya, right... These communists sometimes even fight each other. Look at the border conflicts of the past between the Soviet Union and China. The little war between Communist China and Communist Vietnam. These systems, Fascism, Communism, Theocracy, (such as ther Islamic states) Absolute Monarchys, and other forms of totalitarian dictatorships, rob people of control over their own lives. They have no respect for the rights and responsibilities of individuals. The spirit of freedom, liberty, and individualism is crushed by these forms of government, and the controling power-mad dictators that sit at the top of the "Party". And these systems are the greatest murderers in the history of the world. Almost all the wars in modern times have also been started by them. The saddest thing is... that the seeds that create these systems exist in our own western governments. If we are not vigilant, we could end up with one of these types of government. We are headed that way. Anyone who says that "It can't happen here" is no student of history.

Now, I would like to copy here, a Tribute to America written by a Canadian, Gordon Sinclair back in June of 1973. The piece might be out of date, but the spirit of the piece will never be out of date. It expresses my feelings as well.
The following, from a Canadian newspaper, is worth sharing.

Its subject is America: The Good Neighbor.

Widespread but only partial news coverage was given recently to a remarkable editorial broadcast from Toronto by Gordon

Sinclair, a Canadian television commentator. What follows is the full text of his trenchant remarks as printed in the Congressional Record:

"This Canadian thinks it is time to speak up for the Americans as the most generous and possibly the least appreciated people on all the earth. Germany, Japan and, to a lesser extent, Britain and Italy were lifted out of the debris of war by the Americans who poured in billions of dollars and forgave other billions in debts. None of these countries is today paying even the interest on its remaining debts to the United States.

When France was in danger of collapsing in 1956, it was the Americans who propped it up, and their reward was to be insulted and swindled on the streets of Paris. I was there. I saw it.

When earthquakes hit distant cities, it is the United States that hurries in to help. This spring, 59 American communities were flattened by tornadoes. Nobody helped. The Marshall Plan and the Truman Policy pumped billions of dollars into discouraged countries. Now newspapers in those countries are writing about the decadent, warmongering Americans.

I'd like to see just one of those countries that is gloating over the erosion of the United States dollar build its own airplane. Does any other country in the world have a plane to equal the Boeing Jumbo Jet, the Lockheed Tri-Star, or the Douglas DC10? If so, why don't they fly them? Why do all the International lines except Russia fly American Planes?

Why does no other land on earth even consider putting a man or woman on the moon? You talk about Japanese technocracy, and you get radios. You talk about German technocracy, and you get automobiles. You talk about American technocracy, and you find men on the moon-not once, but several times, and safely home again. You talk about scandals, and the Americans put theirs right in the store window for everybody to look at. Even their draft-dodgers are not pursued and hounded. They are here on our streets, and most of them, unless they are breaking Canadian laws, are getting American dollars from ma and pa at home to spend here.

When the railways of France, Germany and India were breaking down through age, it was the Americans who rebuilt them. When the Pennsylvania Railroad and the New York Central went broke, nobody loaned them an old caboose. Both are still broke. I can name you 5000 times when the Americans raced to the help of other people in trouble. Can you name me even one time when someone else raced to the Americans in trouble? I don't think there was outside help even during the San Francisco earthquake.

Our neighbors have faced it alone, and I'm one Canadian who is damned tired of hearing them get kicked around. They will come out of this thing with their flag high. And when they do, they are entitled to thumb their nose at the lands that are gloating over their present troubles. I hope Canada is not one of those."

Stand proud, America!

Yeah, this comment comming from the person who totally falsely declared, among other things, that...

1. AM news talk stations can charge more than FM stations (the can't... rates are dependent on audience, not band)
2. That HD is dead (1100 on air and over 1000 more licenced by iBiquity)
3. That AM is alive (for anyone under 45, it does not exist)
4. That there is considerable listening outside the most intense local coverage areas of radio stations. (untrue)
5. That there is a lot of AM listening at night (there is nearly none)
6. That called ad rates "fees" which is a never-used term, demonstrating total ignorance of broadcasting.

Who is the laughing stock?

(You are only challenged by the poster who thinks Ethnic "radio and TV" stations should have English on their SAP channels; radio has no SAP and English speakers have no interest in ethnocentric programming of another cultural group)

"In-Stat: Digital Radio Set to Take Off"

"In 2006, 73 percent of respondents to an In-Stat U.S. consumer survey
were aware of HD Radio on some level."

http://beradio.com/eyeoniboc/instat-digital-radio-set/

"Sirius, XM, and HD: Consumer interest reality check" (Alexaholic)

"While interest in satellite radio is diminishing, interest in HD
shows no signs of a pulse."

http://www.hear2.com/2007/02/sirius_xm_and_h.html#comments

This just confirms, the lack of interest for HD Radio, on Google
Trends:

http://www.google.com/trends?q=%22hd+radio%22%2C+xm%2C+sirius&ctab=0&geo=all&date=all

"Rethinking AM's Future"
"Only 175 or so AM stations have even licensed AM-HD. For a number of
reasons, quite a few have tried it and taken it off the air, or so the
anecdotal evidence suggests. Ibiquity no longer reports in its public
summaries whether a station is on the air."

http://www.rwonline.com/pages/s.0044/t.55

For now, HD Radio/IBOC is dead. Analog AM is alive-and-well !

None, and you know it. You are just upset because you had an auto accident with an Hispanic, so are going to take your issues, real or otherwise, out on anyone associated with Hispanics.

Why don't you go fight with a Canadian today for a change.

> on anyone associated with Hispanics.

Untrue. The fact that I had an accident has nothing to do with you being a
pathological liar.

> Why don't you go fight with a Canadian today for a change.

It's their day off.

Not sure if this made it the first time since I never got it back...

Radio Enthusiasts,

This posting is to invite radio entusiasts to investigate Internet Relay Chat (IRC), a free realtime multi-user chat medium that allows users to connect to a network of servers and chat in realtime with other users connected to any of the servers on the same network.

IRC uses "channels" similar to the chat rooms on AOL for those familiar with those. Anyone who connects to any server in an IRC network can join any channel on that network and chat with any and all other users in that channel regardless of what server in the network they have connected to.

Using IRC, it is possible (for example) for radio clubs, ARES/RACES or other EmComm groups, etc. to have a realtime online chat forum where members can connect and have sort of an online clubhouse or meeting. This is great for groups with members in widely separated geographical areas who can't otherwise have a "meeting" in the usual sense.

The IRC network IRC-GLOBAL is one example of an IRC network, and it happens to be operated by radio hobbyists. Feel free to check out the network's website at http://proxemic.net - this network is now inviting radio enthusiasts of all stripes to use the IRC-GLOBAL network as a forum for realtime multiuser chat with other like-minded individuals. Hams, CB operators, scanner and shortwave listeners, whether individuals or clubs, are welcome to use this network.

IRC-GLOBAL offers five open public IRC servers using active connection ports 6661-6669 (and also, 6697 for SSL connections). running full modern services (ChanServ/NickServ/MemoServ/BotServ/HostServ). Secure client connections are available using SSL. Channel owners have full founder control of services tools and security options. All of this is free, there is no charge of any kind for the use of any IRC-GLOBAL servers or services.

There are already some radio-related channels formed (#monitor, cross-linked to the #monitor channels on four other IRC networks as well, is the busiest right now), or you may of course form your own channels - about radio, or anything else as long as it's not illegal or just for the purpose of harassing others.

I hope nobody will consider this "spam" or be offended by it, if so, I apologize - I'm posting this as a network administrator on the

IRC-GLOBAL network, I have no financial axe to grind since the use of the network is totally free to any and all who wish to use it. I'm one of the radio hobbyists who has helped put this network together and just want to invite other radio people like myself to make use of it.

Hope to see you on IRC-GLOBAL soon!

73 de John Kasupski, KC2HMZ
IRC-GLOBAL Network Administrator

I've never had any computer noise problems with the 320. The radio sits four or five feet away from the monitor and has a coax feed coming in from the outside. Nor has a Kenwood R2000 sitting next to it had any issues. Even the dated FRG 7 has remained noise free. I

t must either be a very quiet computer, or the noise issue isn't as bad in most cases as has been reported.

I will soon be purchasing a Sony World Band Receiver ICF-SW7600GR shortwave receiver. I am not too sure on how to pick a good shortwave antenna. Does anyone have this radio and know a great antenna to pick up things or just know a great shortwave antenna in general?

Thank goodness! There are times of day here on the east coast when I
can't receive any of the WWV frequencies well, but 7.335 comes booming in.

Don't waste your money Shortwave is dead! You can listen to all the
availble stations on you PC. Radios for SW are a waste of money.

Proverbs 20:30: "The blueness of a wound cleanseth away evil: so do stripes
the inward parts of the belly."

Proverbs 13:24: "He that spareth his rod hateth his son: but he that loveth
him chasteneth him betimes."

Deuteronomy 21:18-21 (King James Version)
18 If a man have a stubborn and rebellious son, which will not obey the
voice of his father, or the voice of his mother, and that, when they have
chastened him, will not hearken unto them:
19Then shall his father and his mother lay hold on him, and bring him out
unto the elders of his city, and unto the gate of his place;

20And they shall say unto the elders of his city, This our son is stubborn
and rebellious, he will not obey our voice; he is a glutton, and a drunkard.

21And all the men of his city shall stone him with stones, that he die: so
shalt thou put evil away from among you; and all Israel shall hear, and
fear.

EXODUS 21:2,7 "If thou buy an Hebrew servant, six years he shall serve: and
in the seventh he shall go out free for nothing. . . . And if a man sell his
daughter to be a maidservant, she shall not go out as the manservants do."

Really??? We are on the border of Russia??? Nope, I never noticed.
Canada shares land borders with the United States to the northwest and
south, and maritime claims bordering Denmark through Greenland as well
as France through the French possessions of Saint-Pierre and Miquelon,
to the northeast and southeast respectively. Canada borders Alaska on
the north-west, and the rest of the continental United States on the
south. Canada faces the Arctic Ocean to the north, the Atlantic Ocean
on the east, and the Pacific Ocean to the west. Seems to me that we
have the Arctic Ocean and icecap in the way. A pretty cold and
desolate area of the world. A bit of difficulty there, it seems. You
know exactly what I mean. If you can't figure it out, then go back to
school. I can easily drive my car to the U.S. Take a look at a map of
the world sometime. If we are on the border of Russia, then explain to
me whereabouts on border of Canada you can drive to Russia in a
matter of a few minutes. We have areas on the U.S./Canadian border
where the clubhouse of a golf course is in one country, and the pro
shop in the other, (New Brunswick/Maine) Places where the border runs
right through the middle of a hotel bar, Places where crossing the
border is on a coupple minutes drive across a river, (Niagara River,
Detroit River), or simply stopping at Customs on the road as you drive
along. etc. etc.
Geography and history are two of my big interests, so if there is
some information that I am missing regarding Canada sharing a border
with Russia the way it shares a border with the U.S., then please fill
me in. I'm all ears, so to speak, and willing to listen to what you
have to say.
Your turn Mike.....

Simple long wire, if you have the room, is the best. Longer the better, well, after 300 ft becomes an overkill. Run it though a 9:1 magnetic balun and you are in business.

If you don't have the room, look into shortened antennas, even a "broomstick antenna" will get you a bunch of stations--if mounted in a good location.

The three Abrahamic religions all tell their proponents how evil the
other guys are. It would appear that the monotheistic cults are all the
same. The particular one that teaches it's followers to forgive and turn
the other cheek seems to attract the biggest hypocrites.

==========
Things in the world stand today as they have for a long time already:
the most violent, threatening developments on the planet are driven by
religious beliefs drawn from the three Abrahamic creeds. The worst
hatred confronting humanity is, and always has been, ï¿½sectarianï¿½ hatred.
Why?

Well, if the parents ended up with a drunken bully, perhaps he needs the
chit beat out of him. Perhaps this will aid him in being able to get
along well with his neighbors. At least he should be given the chance
to have a good beating put some sense into him, before someone gets
tired of him and kills him. However, Jesus ruined all that--with that
"turn the other cheek" line :(

Both countries claim ownership of the globe up to the pole. I don't
believe we were discussing a particular TYPE of border. In the general
scheme of things people will fight over an area the size of an ice cube
if it's in on a disputed border area.

A neighbour is still a neighbour, whether they're across the alley or beside you.

The audio is already available on two connectors.

Unfortunately, the BC-760xlt only has an envelope detector.
I need the signal before the detector.

Why should the US be concerned about Canada? They own it all anyway.
The forest, mines, manufactures, real estate, retailing. There are
very few Canadian businesses left. As long as they behave themselves,
Canadian politicians will be allowed to run their little US franchise
operation and do what they are told by the big boys. Of course, the US
is in the same position: check out who owns the commanding heights of
US business. Don't let agent provocateurs stir up quarrels between
Canadians and Americans: they have much more in common than to fall
for that trick.

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.

In order to ensure that rec.radio.info contains only appropriate
articles, it was decided to create the group as a moderated newsgroup.
```

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the bulletins.

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

(Adapted, with permission, from the original article written by Mark Salyzyn, AG4YD, ex-VE6MGS.)

4714. rec.radio.info Posting Guidelines

Newsgroup: rec.radio.shortwave

Posting-Frequency: posted monthly
URL: http://www.panix.com/~rram/usenet/rri/index.html

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group and to rec.answers/news.answers every two weeks. You are now reading the second article, which explains how to submit something to rec.radio.info, and which answers some Frequently Asked Questions about the submission process. The first article is titled "Welcome to rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post the article to rec.radio.info, as you would do with any other newsgroup. The difference is that the software recognizes the special status of rec.radio.info as a moderated group, and will e-mail your article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the transparency offered by the newsreading software is probably more convenient.

If you have any questions, or wish to deal with some administrivia with the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have to read it first, give it the stamp of approval, and finally send it on to the group. We will attempt to read and decide on all submissions within 72 hours at the very least, though we will probably be able to process submissions much faster in actual practice.

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and

articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions
rec.radio.shortwave International broadcasting on the 'HF' bands

rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org>

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

(Adapted, with permission, from the original article written by Mark Salyzyn, AG4YD, ex-VE6MGS.)

TEH WAY OF THE K00K
Never learn from your mistakes.
Always practice your mistakes; you may get them right.
Always pick on those smarter and tougher than you.
Always believe that only you know the TRVTH.
Never allow logic or reason get in the way of a good k00k.
When being overwhelmed by logic and reason: k00ksuit!
If you are going to be wrong, do it at the top of your lungs.
When caught in a lie: LIE!
When in doubt: Order the Crab Won Ton
Plagiarism is your friend. Use it.
Whenever contradicted; morph, start calling people names, and make false
accusations. Include the children of your target in your allegations,
even if they don't have any.
(06-Jun-05) When nobody else will listen, post to your own fan group.
(06-Jun-05) Obviously, since you have your own fan group, this must mean
that you have fans. Post prolifically to your fan group - you wouldn't
want to disappoint them!
(10-May-2005)Everyone reads usenet. Approval here means approval
everywhere.
Post numerous blank posts, or posts containing only a message id.
Post numerous copy&paste web articles from crackerpot websites.
Never forget to call kookologists "k00ks."
If there are several, call them "sockpuppets" too
When all else fails, accuse various and sundry kookologists of e-mailing

viruses to you. This is a sure-fire method of garnering sympathy and ensuring that the General Public will always see things your way. An especially effective sub-strategy here is to accuse them of infecting you with the 'Sasser' worm via e-mail.
Quote notorious scientists or writers - it makes it look as if they approve the drivel you are writing!
(9-Jul-05) Anytime your computer is infected with a virus, bogged down by spyware, attacked over your internet connection, or otherwise suffers from preventable problems, government agencies are responsible and are trying to silence you and are monitoring your computer files.
Ignore all traffic signs and feel free to trespass, you don't have to obey any rules.
Scare your enemies with lawsuits, police escorts and whines.
Always back up your empty (albeit noisy) threats with phony LARTs, false police reports, and harassing letters to the FBI and other gubbermint agencies.
Be vigilant in your redundancy. The more you repeat yourself, the more likely others will believe you!
If you can't find anyone as crazy as yourself to support you in the flamewars you start with the normal population, create sock puppets and use anonymous remailers that shamelessly hang on every word you write.
(17-Mar-05) When dealing with law enforcement, remember that it is they who have the problem, not you. Be sure to inform them of this at every available opportunity, as they will surely appreciate your constructive criticism. Be sure to make them aware that YOU KNOW YOUR RIGHTS! ("The cops like that, when people know their rights. That way they don't have to read them to you on the way to the station." - George Carlin)
The more your fake personalities adulate you, the more respect you'll get!
When confronted with a reality that you don't like: Announce loudly that you are departing, never to return as long as there's an Internet. Come back in three or four days and claim you were drunk, hacked, abducted by alience, or forged. Alternately you can just not even mention your prior departure, and if anyone asks you about it, either ignore them or respond with something along the lines of "YOUR NOT THE BOSS OF ME! *PLONK*!" People really know you mean business then.
Always remain clueproof.
(20-Mar-05) Anyone who does not believe that you are the reincarnation of [$DEITY_OR_PROPHET] is obviously an infidel lacking in faith whose soul in in peril of everlasting damnation.
When responding to one line challenges, post paragraphs of rants and screed in response.
Incoherency is not a roadblock to poasting.
Neither is illiteracy.
Delusions poasted often enough become fact.
Claim you will destroy <insert newsfroup> for attacking you.
When spnaked, send cmsg for Fanboi newsfroup(s).
Find your Lame, Use your Lame, Be your Lame!
Post Edit when the TRVTH hurts.
Always sneck the offending newsfroups.

Always poast pictures of yourself so you can be admired in all your k00ky glory.
Always accuse others of the very acts you are guilty of.
Post lots of boasts about your high IQ and incredible talents.
(20-Mar-05) If you repeat a lie often enough, it becomes the truth. Anybody who fails to understand this is engaged in a deliberate campaign of misinformation and character assassination.
Always <plonk> somebody just before replying the plonkee!
The k00k considers itself the most intelligent person in any conversation, possibly on the planet. Other people are benighted and ignorant, and have been waiting their whole lives for the k00k to rescue them from intellectual darkness.
Write a self-published book and claim it a success. Bonus points for comparing it to "Mein Kampf" and/or the Bible.
Declare yourself equal to a deity of your choice.
Claim that you've come from other planets.
Claim thousands of past lives.
Frothing complaints carry far more weight when you send them from "legal@" some domain.
Nothing strikes terror into the hearts of your detractors more than telling them that you're archiving their messages for possible use in the future.
Never forget that everyone else posting to Usenet is a paid disinformation agent looking to discredit you.
Usenet is governed by US law. If a poster in Romania killfiles you, he's obviously violating your 1st Amendment rights and can be sued.
Every news admin in the world hangs out in NANAU, and they're just dying to nuke the account of that meanyhead who just called you "fucknozzle". Drop 'em a line - that's what they're there for, after all.
AUK will be closed down. Just you wait and see.
They've nuked hundreds of accounts in the name of free speech and *yours* will be next.
The k00k will, without any trace of irony, lie, manipulate, impersonate, censor, and declare themselves powerful in ways ranging from the ability to have an account shut down to being God Herself, in order to convince people that they are not liars, manipulators, censors, or insane.
Abuse women while telling how many hundreds you've loved. Nevermind that you're one ugly motherfucker and that there were 30,000 femininas that thought you were a scumbag with bad teeth.
Remember that your ko0ky klaims are 'facts', and that 'facts' do not require proof.
Do not neglect to poast your responses to forums that the originator doesn't read. This will make the people in that forum very impressed with how you tear him to shreds without him being able to respond. They like it even better if you are off-topic for that forum.
Keep in mind that lack of evidence supporting your konspiracy theory actually _is_ evidence, of how effective the konspiracy is in hiding.
(06-Oct-05) When spanked, always retreat to the safety of the Ad Hominem.
(04-Aug-2005) When spanked mercilessly for days on end, proving with

each poast just what an illiterate and ignorant fool you are, ALWAYS claim ownership of [person(s),froup(s)]. This works on so many levels. It inspires dread in your opponents that they will no longer be able to poast in their home froup and that they will eventually have to pay rent, to name just two.
Any problems with your poasts are the fault of the konspirators, who are trying to stop you from preventing the extinction of humanity.
Konspiracies that are able to subvert whole governments are always unable to silence konspiracy ko0ks.
The entire United States government is willing to spend millions of dollars for the sole purpose of harassing you.
Hollywood is making movies based on your personal life.
Do not consult psychiatrists or other mental health professionals. They are part of the konspiracy, and will sedate you and lock you away and keep you drugged if you tell them the truth.
Numerology and Astrology are respectable sciences and are useful for proving your case.
Everyone is Tim Hill, or David Green, or...
There is a fine line between trolling and kookery. Find that line and cross it repeatedly. When you are killfiled and/or LARTed for net.abuse as a result, claim victory. If you lose multiple accounts, this merely proves that you are indeed a world-class troll, with a black-belt in manipulation.
If you respond to every post someone else makes, they're obsessed. If they respond to less than 1% of your posts, they're even more obsessed.
Publishing people's real names, addresses, and phone numbers when there's no other way for you to come out of a flamewar with any dignity is cool, and proves that you are a master of secret internet information stores, and absolutely not to be fucked with.
Everyone is out to get you. You can put a stop to this by telling everyone that they're out to get you at every available opportunity.
You are the only sane one.
Those that give you a hard time about morally bankrupt things you yourself admit to are just persecutioners of the new inquisition.
Yelling in all caps and cursing at your detractors is debate. Your detractors laughing at you with sarcastic remarks is obvious anger and jealousy.
If doing something results in the loss of your account, legal hassles, or blunt trauma injury, do it again. It always works better the second time.
Asterisks, lots and lots of Asterisks.
Poking holes in kookscreed is stalking, and is a felony.
K00ks LOVE to "connect the dots". They are, of course, dots that only the k00k can see.
"They laughed at Einstein, too!"

Hello Mike:
And then sometime in the future European countries and North American countries might try to claim the Atlantic Ocean all the way to the Mid-Atlantic Ridge. So then we would share borders with Ireland and Portugal etc.
Countries can make any claims that they want. Doesn't mean that their claims are valid. That can only be detemined by negotiation in an international setting. The fact remains, Russia is on the other side of the Arctic Ocean. Canada does not share a border with Russia. Territorial water extend to 12 miles from mean low water mark next to land. Exclusive Economic Zone can extend to 200 miles. Anything beyond that is International Waters. Especially beyond the continental shelf. This is determined by international global agreements. The UN Commission on the Limits of the Continental Shelf in accordance with the United Nations Convention of the Law of the Sea has not, to this point ruled in favour of anyones claims to the area of the North Pole beyond anyone's continental shelf. The Russians tried to make a claim beyond their continental shelf for a huge area that includes the North Pole itself, but they have received no answer beyond a statement that

recommends additional research into the subject. Canada claims the waters around and between their islands in the Arctic. In any case, anyone who thinks that Canada shares a border with Russia in any normal understanding of the term "Border" is badly mistaken. Canada shares a border with Russia about as much as Canada shares a border with Scotland.
Let's not try and argue about anyone's supposed claim to the Arctic Ocean up to the North Pole. At this point in history no one has a valid legal claim to the North Pole that would be accepted by the international community. I suppose that there is a possibility that the situation could change in the future. But then which way would the decision go? In whose favour? No one knows at this point.
Let's go back to what I was trying to say... If Canada shared a border with China or Russia (the former Soviet Union), for the past one hindred years, (a "Land Border" for those who have difficulty understanding), things would have been much different for Canada. Just look at what any country that borders (Land Border), on Russia has gone through in the last one hundred years. Damn glad we share our border with the U.S.
Back to you Mike.....

M II - Borders ? ? ? HAaaaaaaaa !

Actually Canada is Fly-over-Country for the USofA and
Russia; and most likely China and North Korea too.

What Is ? Fly-Over-Country - Yes most of the ICBMs will
be Flying Over Canada - - - Be Sure To Wave - Bye Bye !

wings over canada takes on new meaning ~ RHF

In years past (maybe still) that was certainly one of CanaDuh's big worries. Those ICBM's would be intercepted over CanaDuh and blooooooie! More of a wasteland than it already is.

Profit Stair is out in the barn with the sistahas...

I thought Mark from Michigan was still in jail for his
kooky militia activities in the 90's. Has he been paroled
and is he back on shortwave? Now there's one crackpot
who was fun to listen to!

Of course there's always the Great Liberty Net on 3.950
but ham radio op's are usually very boring people.

Oh well..I guess I'll just have to wait for Texe Marrs on WWCR
on Sunday night. Ole Texe is always good for a few laughs.
My cousin calls him "the preacher from the motherships"

Was this some of your work Cuhulin?

Someone posted an unflattering remark about me on a message board. It said, "I'm watching Barbie Bassett do the weather right now. That dumb broad doesn't know beans about the weather. I watch wapt.com for local Jackson weather." I don't know Larry (who posted this), but my parents would be very disappointed to know all of the money they spent on my Masters Degree was for nothing.

One doesn't need millions and millions of dollars worth of equipment to get a handle on what the weather is going to be like in the next 24 hours or so.But using that equipment and still misjudging the weather so many times is a waste of money and equipment.I once read somewhere the tv stations get that equipment for free,it is our tax dollars that pay for it.

First I've heard of it. Certainly, what passed for the civilian
administration were attempting to put out some feelers that way, but the
Military Government would have none of it.

I'm sorry to say, but the only way to convince the military leadership
was by the use of brutal and overwhelming force. That that force
happened to be wrapped up in a small package capable of destroying a
city was even more impressive to them.

They were under the impression that the US had an arsenal of the things
just ready to go on all Japanese cities. In fact, there were only two
ready and the Hiroshima bomb was dropped on its test-firing, there only
being one of that type.

Now I understand. Some language services for which there is no demand should be provided to give you a false sense of equality and balance. Yours is an inherently unfair proposal though, because you are omitting many many equally valid two-way translations.

We should provide:
Uzbek to Spanish and vice versa.
Slovak to Cambodian and vice versa.
Farsi to Wu and vice versa.
Lithuanian to Hawaiian and vice versa.
Qawiaraq to Yoruba and vice versa
etc.

Indeed why don't you busy yourself this slow sunday by figuring out how many two language translation permutations there are. Then figure out who will pay for it all.

Once you have finished then consider why it is often important to limit our choices to the ones that will result in some value.

> up things or just know a great shortwave antenna in general?

Dear Sir,

The best antenna for the Sony ICF-SW7600GR is the one designed for it: the Sony AN-LP1 Active Antenna, There are two problems with this: it is somewhat expensive (about $90.00 plus shipping) and it has been discontinued in the United States. The one place to buy one, of which I'm aware, is from an eBay seller. (Just go on eBay and search for < AN-LP1 >; make sure you insert the hyphen.) There is at least one dealer there who sells the antenna for $89.00, which was its last US price, and $15.00 shipping, which is not bad considering the antenna will be shipped from a foreign country. If you can afford the price, this is definitely the way to go. This antenna works extremely well with the ICF-SW7600GR and is designed to collapse into a bag which makes for very easy transport. It is a very elegant antenna and its performance is superlative, especially with the '7600GR. (It must be mounted in a window. Like all loops, it is directional, so you can experiment with various windows in your house.) When I go on vacation, I always carry one of my '7600GRs and one of my AN-LP1s.

Should you not wish to go this route, next best is the Sangean ANT 60 antenna. This is a "wind-up" antenna which can actually fit in your pocket. When unstrung, the length is about 23 feet. This antenna works surprisingly well with the '7600GR and is even usable outdoors in windy weather. (The AN-LP1's instructions state it is for indoor use only; it can, however, be used outdoors if there is no wind.) The Sangean antenna costs about $12.00 - $15.00 and is available from several sources - Universal Radio, AES, and C. Crane. Note that this antenna uses very thin cable and is therefore somewhat delicate. I have had a couple break over the years but, at the price, it doesn't matter. I always keep a few spares on hand. (Even if you buy an AN-LP1, it is good - and I recommend that you do so - to buy one or two of these Sangeans just to have around for use when using the AN-LP1 may not be appropriate.)

My final recommendation to you would be to "roll your own." Forty to sixty feet of insulated wire (16 - 18 Gauge) terminating in a 3.5 mm plug and strung around your room(s) should work wonders in your situation. You can, of course, get more elaborate by adding, as

someone suggested on this thread, a balun, but, frankly, with the Sony radio, this is really not necessary. i believe the simpler the better with this radio, at least in my experience. (Do NOT go longer than about sixty feet - someone recommended 300 feet; this is far too long for this radio - or you run the risk of "overloading.")

If at all possible, do consider the AN-LP1 antenna. I think you'd be pleased with it and the results it affords.

Good luck.

Joe

If I am not mistaken the Sony ICF-7600GR comes with a wind-up antenna of
this type. Not need to purchase another one.

Early mornings and late afternoons here on the US east coast I'm hearing a fairly strong signal on 9,200 kHz with what sounds like Chinese music. There's little on no commentary. Rapid QSB typical of long haul propagation. Any info on this one?

Thanks,
Art N2AH

W'ere too far north. It is sunny and clear here temp 32.

Puzzle answers:
(1) The Northwest Angle.
This is a piece of Minnesota that is cut off from the US. It is
a peninsula that juts into the Lake of the Woods in Ontario. You have
to drive north in Manitoba and then turn south to get into the Angle.

(2) Point Roberts, Washington
This is the south part of a peninsula that juts into Boundary
Bay south of Vancouver. You have to cross the border at Blaine, Wash.
and drive north through British Columbia and then west and then south
to get there. It is about 30 miles, as I recall, by road and school
busses do it twice a day.

If you had a large collection of SWL rigs, sold them all off, and out of the profit could have just one SWL radio for general listening and occasional DX, what would you pick? Keep in mind the budget is $2000.

Before you hook up a long wire antenna, just try the great built-in
whip. Portable radios are designed to perform very well with no
further assistance and I suspect you will be pleasantly surprised at
the number of signals the 7600 will pick up.

For general sw listening I would get something like a Degen DE1103 or
a Sony 7600. Fine performers that will keep you well within your
$2,000 budget. Or, if you want something with a lot of bells and
whistles and better audio then go for the Eton E1. Put the remainder
in the bank.

how about the reality of EQUAL expectations? that concept seems to be
alien to your fundamentalist way of thinking.

Now, use of the term "dune
> coons", especially in the context you use it, _is_ rascist.

absolutely. it's the way you think. i just leave the dead cats on the
doorstep.

You are white,
> middle or upper-middle class

now let me see...son of a pittsburgh steel worker...laid off 3 times
in last 5 years as semiconductor industry collapsed

IOW you've more more cliches than brains, which helps to explain the
way you (don't) think.

, probably have not read a variety of opinions, talk
> only to people you already agree with. You learn more by talking to people you
> disagree with, if they are reasoned in their thinking.

says the guy who's never read anything but noam chomsky. says the guy
who mouths every left wing cliche as if they were engraved on tablets
from mt sinai...
>
> Now, Bush and the neo-cons, and possibly you, _are_ fascists, defined as: (in

>
> The invasions went both ways. I seem to remember something about some "crusades"
> or something like that.

ever read bernard lewis? no? pity, that.

the crusades were not a major event at the time they happened to most
arabs. they aren't mentioned in most documents from the time. they
were ignored, being a minor penetration of a vast empire.

that hardly compares to the muslim invasion of austria in 1683 when
they damn near destroyed vienna

but at least you're finally starting to admit that OTHER people
besides americans can misbehave. there's hope for you yet.
> >
> > >

> attitude that so many Americns have.

irrelevant. which is 'more' dangerous is irrelevant to the fact that
BOTH are wrong.

We are now, as at no other time in U.S.
> history, a "lumbering, bellicose, dimwitted giant."

and the cliches reach a tidal wave...a tsunami of incoherence...

It _is_ true that the U.S.
> had engendered much good will towards us during WWII---we immediately began
> squandering that good will through unwanted foreign interventions.

as opposed to islamist fascist aggression in afghanistan...soviet
imperialist aggression in afghanistan and korea...UK intervention in
the suez resulting in US intervention to force the UK to withdraw

IOW you have ignored about 90% of history in favor of 1 idea that you
think explains everything

that's fundamentalism

American
> hubris and jingoism will be our downfall as we're beginning to see now. I don't
> hate America. But, I refuse to accept America as it is. We're headed in a very
> immoral (I hate to use that word) and dangerous direction. It's neo-cons and
> PNAC that are taking us there. Please! Read about PNAC. Just Google on "PNAC",
> click on the links provided and read.

why not try reading about the 'council on national policy'...a group
that truly DOES practice behind the scenes politics.

you take CURRENT policy and try to project it into the past as if this
were ALWAYS the case. it simply isn't. as i said, you have 1 idea.
america is evil. so you think it's ALWAYS been evil and is UNIQUELY
evil. no other country before or since has been evil.

and that is wrong. wrong, wrong, wrong.

>
> > >> >
> > says the inveterate racist....let me know if you run out of bed
> > sheets...
>
> I'm not going to insult you in the childish manner you've insulted me. I'll note

> that you claim to see in me what you, in fact, recognize and dislike in yourself.

sorry, sport. if you're a racist, as you are, then i'm gonna call you
on it. you're as much a racist as any s. baptist who believed that the
white man's burden was god's destiny for the west. you believe in the
white man's burden in your own way.

if we DO lose in afghanistan it will be because of the degeneracy of
islam, not the problems of the US.

I would choose either a Satellit 800 (second revision, made after 2002) or a Kenwood R-5000. With the left over money put up at least one and possibly several proper antennas. And still have money left over.

While those may seem like rather "pedestrian" choices, the difference that a great antenna makes is far, far greater than the marginal difference you see with a more esoteric radio.

ah, the racist rigidity of the fundamentalist mind.

he believes that the nation state is the only way to judge historical
events, not realizing that the nation state was invented in 1648.

uh, where do you think AQ was based (by the way...do you KNOW what 'al
qaeda' means?).

so, yes, afghanistan did attack us.

> >
> > killing not one person
> > > known to be directly connected with the 9/11 attacks.

> 9/11 terrorists.

other than, of course, AQ was based in afghanistan and bin laden knew
of, and approved the plan which was formulated by sheikh khalid
mohammed...also AQ...

The terrorists were Egyptian.

uh, no. 15/19 were saudi arabians.

Trained by Al Qaeda? Maybe? To do
> what? Not known with certainty. The U.S. assumed (unequivocally asserted) that
> the training was to hijack airplanes.

guess he's never read about the flight school training the terrorists
took...

What al Qaeda/bin Laden has clearly stated
> is that the U.S. stop supporting oppressive regimes in the Middle East

is there any other kind? and what is 'support'? we had no relations
with libya yet they were as murderous as any. we had no relations with
the sudan yet they caused a civil war which killed 300,000. the french
had $10B in oil contracts with hussein...

yet you think ONLY the US 'supports' (sic) these regimes.

and bin laden's remedy? why...islamist fascism...a goal you have NEVER
condemned. why?

because you're a racist. that's why.

and in
> other Muslim countries. It may seem paradoxical, but if these "pro-American"/
> unpopular regimes were overthrown or voted out of office, not much would change
> except the U.S. would probably no longer be attacked by so-called extremists.

more racist day dreams. if you READ qutb or azzam you KNOW they've
been planning to attack the west for 60 years.

but, no. you prefer the white man's burden. you prefer to think of
yourself heroically standing astride history, defending the ignorant
savage muslims....who are too stupid to invent fascist ideologies.

> Muslim nations would have every reason to make peace with us

uh, why? why do you think that, because this is YOUR belief it's also
THEIRS? where have they believed in peace? in democratic bangladesh
where they've called for jihad against a democracy? in india where
they do the same?

WHERE is your evidence for your cult belief?

, trade with us
> (oil). The problem is that we would be unable to control and dominate them.
> Afghanistan was being bombed by the U.S. in the 1990s.

and we helped liberate them from soviet imperialist aggression...

9/11 was not an
> unprovoked attack. It is probably true that 9/11 was a convenient excuse to
> invade and control Afghanistan so that we could build and control pipelines to
> transport oil and gas from the east side of the Caspian Sea

jesus...is there ANY cliche that you won't vomit?

i guess you didn't know the taliban visited the US in 1994 to discuss
a pipeline...long BEFORE the war. and it's been 5 years since we
liberated afghanistan and there's no pipeline. you seem to ignore the
evidence in favor of cliche of the moment.

, pipelines planned
> to run through Afghanistan. It is also true that Iraq was attacked so we could

> control their resources, build pipelines through Iraq.

well let's see. we've spent $300B to get oil worth a few billion that
we can't extract for 25 years.

yes, i can see you know as little about math as you do about history.
>
> It seems that the U.N.'s approval is not very important anymore.

except, of course, the taliban killed the UN high commissioner in
iraq...

When denied it,
> the U.S. claims the right to attack anyone, anytime, for any reason. When the
> U.N. Security Council members are bullied and bribed into approval, the hides
> behind that. Case in point: Iran _does_ absolutely have the right to enich
> uranium for peaceful purposes.

gee. al baradei seems to think they're hiding things...why didn't the
iranians tell him about the enrichment facility at natanz? i'm a
physical chemist and can tell you that was, to put it mildly, a
significant oversite.

The U.S. claims Iran is doing so to make nuclear
> weapons, but the U.S. has absolutely no proof that Iran is planning to build
> nuclear weapons. Still, U.N. S.C members are bullied/bribed into passing
> resolutions to impose sanctions on Iran. No proof is required. The U.S. is
> simply not required to provide proof.

other than the fact that, as the IAEA has stated, the iranians have
lied.

oh...incidentally...if the UN is such a US puppet, how many UN troops
are in iraq?

precisely zero. none.

so, again, your point is squarely on top of your head.

> >
> > All reasons for attacking
> > > Iraq _again_ (March 20, 2003) have been discredited, and we're still there

> > > imposed a puppet goverment
> >
> > ?? a govt elected by the people in elections monitored by the UN...
>
> The election was contrived and staged by the U.S

the UN didn't think so. in fact, no one but you believes that.

. Only those having the American
> "seal of approval" could play the game. In short, Jalal Talabani was hand-picked
> by the U.S. Do you really think the Iraqis would have elected a Kurd as
> President?

who would they have elected? arab islamic ideology forbids democracy,
let alone nationalism

Compare Iraq to Nicaragua

irrelevant.

. So the U.S. has a long, unpleasant history of imposing governments,
that
> the people don't want, on other countries.

perhaps you'd prefer we hand germany back to the nazis? the japanese
back to the 'bushido' culture? that what you're advocating?

or afghanistan to the islamist fascists?

>
> >
> > oh i forgot. he hates arabs.
>
> I hate no one. I distrust my government and have no faith in the "wisdom" of the
> American people. They elected Reagon twice, Bush twice. I got some land in FL...
> Case closed!

and muslims have done what with their first democracy in the middle
east? murdered 40,000 of their own people. but you ignore
that...because you don't particularly care about arabs, or what drives
islamist ideology. you can't conceive of anything that isn't related
to the 'white mans burden'.

>
> > > >

> All three of the radios I suggested have a built-in antenna system.

I think he wants to actually hear signals. I agree with spending the
money on the antenna system first, then buying a radio. Any of the
Drake R8 variety would work nicely for a solid G.C. rig.

3D
Kenwood 950sdx, 2000
Drake R8A, R4C
Many inferior portables ;-)

Now I understand. Some language services for which there is no demand
should be provided to give you a false sense of equality and
balance. Yours is an inherently unfair proposal though, because you
are omitting many many equally valid two-way translations.

We should provide:
Uzbek to Spanish and vice versa.
Slovak to Cambodian and vice versa.
Farsi to Wu and vice versa.
Lithuanian to Hawaiian and vice versa.
Qawiaraq to Yoruba and vice versa
etc.

Indeed why don't you busy yourself this slow sunday by figuring out
how many two language translation permutations there are. Then figure
out who will pay for it all.

Once you have finished then consider why it is often important to
limit our choices to the ones that will result in some value.

I used to like to watch some of the variety and comedy shows on Univision.
But I did my own translation... I learned Spanish. It's not so tough,
really.

Have you considered getting help? Counseling is available for those in your situation. A month ago you were bashing Islam, now they are your brothers. Make up your mind.

Me? I think Islam and it's adherents have been getting screwed since the Crusades..The Crusades of 900 years ago and the Crusades starting at the end of the 1900 hundreds under Bush the First.

I'm not surprised the adherents get pissed off and want to stop the invasions and the subsequent thefts and pillaging that occupation allows..

Your numbers are WAY off. Please check out what the followers of Marx
and Engels have wrought:

http://www.hawaii.edu/powerkills/20TH.HTM

which was found here:

http://www.hawaii.edu/powerkills/welcome.html

Note that the victims of the US wars are under reported. Half a million
Filipinos were killed around the turn of the century and a similar
number of Iraqi children died as a result of embargoes.

Madeleine Albright claimed that was alright with her.

Well, I was raised Catholic. If I ever brought up the old testament and
stated it should be followed, my other church members would worry about
me, indeed, I'd imagine I'd shortly be in for a three day observation in
a mental hospital.

As to the ten commandments, I consider those to be the minimum
requirements I hold for my neighbors, if you don't hold that the ten
commandments are correct, then I DON'T want you for a neighbor.

Jesus was forgiving those who asked for forgiveness, forgiveness of a
thousand-times-a-thousand. He was for turning the other cheek and
showing men why they were wrong with argument and debate and example.

Anyone following the old testament and attempting to make others suffer
under those laws should be put to death, or, at least imprisoned where
they can do no others harm.

I think modern Christians all realize that the new testament is good for our present society and advanced civilizations as exist today.

However, I am afraid mooselums still follow the old testament and would enact those laws upon society. I think it is proper to put such men to death if they cannot be removed to a place where their dangerous beliefs cannot harm or deprive others from their pursuit of happiness ...

But, you are correct that this newsgroups focus should be on shortwave, hopefully in a Christian atmosphere, where argument, debate, un-revocable rights which every individual are endowed with by their creator and personal beliefs are respected, as long as they don't endanger or oppress others, as long as these are followed.

Unless you know him to be hearing impaired he should be able to hear plenty of signals with any of those radios I mentioned. After all he was only looking for a radio to just do some swling. Why compromise the audio quality with a communications receiver like a Drake unless it is really needed. Such a radio would be a complete waste of money for the application he described.

But he's talking about a $2000 budget, and picking one receiver out of a
"large collection".

That implies he is asking about a better than average receiver. It's
a variant on "which receiver would you keep?" or "which receiver do
you lust after?".

There's little point in specifying a $2000 budget if he's not actually
interested in one of those better receivers.

Jews also follow the Old Testament. Will they also be put to death or
put into a place where their dangerous beliefs cannot harm or deprive
others?

You seem to forget that Jesus didn't CHANGE the Laws of the Old Testament.

Your idiotic 'mooselums' tells me more about how you think than I care
to know. I'm sure the Catholics would appreciate you not giving them a
bad name in the future.

Maybe what you really need to do is make sure you got a nice quiet
piece of land somewhere far away from the city. Then a good antenna
and a decent receiver. One of those crappy little chinese radios
actually do a nice job in a quiet zone. I especially like it when the
power goes out cause things get nice and quiet.

El Caminolito {Roadie}
- - - my, My. MY ! Don't You Get Excited.

As one of my old Mentors {Sensei} "VQ" an All American
Winchester Model 94 carrying Yodeling Chinaman who was
truly a Man-of-Two-Worlds {Chinese born in America and
a very Conservative Christian.} would often say :
"Let Every Day Be A Holiday ! -and- Let Every Meal Be A Feast !"
{Translation : Rejoice in this Day that the Load has given
-and- Be Thankful for the Bounty the God has Provided.}

FYI - This whole posting on my part has been for me an
Exercise in the {Politically Correct} Absurd.

WHAT IF "THE SHOE WAS ON THE OTHER FOOT ?"

Generally the 5% Threshold is the point where : The
Euro-American {White} "The Majority" of Americans
MUST start providing any other so called Minority
Group "Equal Access" to various things in our Society
in their own Written and Spoken Language so that they
can be treated Fairly and Equally -Or- At least give the
appearance of Fair and Equal Treatment and Access.
- - - So when Euro-Americans {Whites} are no longer
"The Majority" in an Area should not the same Rules

Apply . . . Of Course NOT !

As to all the 'other' Minority Groups that you listed
in your post =IF= They are more than 5% of the
population in any area of the USofA : Then IMHO
they should be given Equal Access via the SAP
Channels on the TV and Multi-Casting on DTV to
Programming Content in their own Language :
After all it is only Fair and Equitable.

The Reply That : "It Would Cost Too Much"
has never stopped the Courts in Prescribing
Remedies to Correct In-Equalities to Protect
the Rights of a Minority.

fairness and equality is after all 'good business' ~ RHF

Hmmm. We have jewish congressmen and senators, if they would seek to
over ride the constitution of the united states, which was founded on
the new testament (read it), then yes, the charge of treason should be
leveled upon them and a death sentence issued if warranted.

-
- I used to like to watch some of the variety and comedy
- shows on Univision.
- But I did my own translation... I learned Spanish.
- It's not so tough, really.
-

BAD,

That is like telling any Minority including many newly arrived
Spanish-Only-Speakers when they come to the USofA :
YOU SHOULD LEARN TO SPEAK [WRITE] ENGLISH !
-tic- Which is Inherently Un-Fair, Un-Just and Just Not Right.

We have the Technology {SAP} to make things : Fair, Just
and Yes Right; plus we have the resources to get the job done.
So... why don't we : Just Do It !

FWIW - Yes there are many programs on the Spanish
Language Radio and TV Stations that could {would} be
of Interest to Me -if- I just knew the Language and could
understand them. And SAP solves that problem for me
and everyone else who is Limited {Handicapped} by
being an English-Only-Speaker.

For Example : Often there is an American Made English
Language Movies being Broadcasted {shown} on a
Spanish Language TV Station in Spanish {i.e. - Rambo}
and what is on the other TV Stations is not what I want
to Watch {Listen To} -but- I would Watch {Listen To}
"Rambo" on the Spanish Language TV Station -if- the
SAP Channel has the original English Language Sound
Track for me to hear and enjoy the Movie.

? Cost ? - No Translation Cost at All since the original
Movie Sound Track was already in the English Language.

-SAP- for the Spanish TV Broadcasters is a Second
Market which would Double the Potential Number of TV
Watchers for many Programs with Cross-Over-Appeal
to the Euro-American Market. The 'expanded' Market
Demographics for both Spanish and English Languages
should "Sell" the SAP to most Sponsors. Resulting in
Increased Ad Sales and Revenue for the Spanish TV

Stations. With the new Digital TV and Mutli-Casting
and AM & FM IBOC "HD" Digital Radio the SAP feature
is Media Wide and Multi-Language-Broadcasting is a
reality of the future for Broadcaster who want to stay
in the business. -Hello DE- Are You Reading This ?

once again - i will conclude with this truism :
fairness and equality is after all 'good business' ~ RHF

What does storm shelters have to do with Shortwave Radios? Well,think
about it.
I am thinking,thinking about building a storm shelter in my back yard.I
can get somebody with a backhoe to dig a hole in my back yard about six
feet deep by four feet by four feet (big enough for doggy and I) and I
can buy some concrete blocks and mortar and paint the blocks with
Xypex.I can do it all myself except for the backhoe stuff.

(You're gonna think this is a bit crazy)

Degen DE1105;

It's shirt pocket size and exceptional sensitivity make is one of my
favorites

- true, no SSB

- True, not full coverage..

- But ;

AM / FM/ MW / SW

Shirt pocket size;

- size matters

With the rest of the $$, I'd probably get one of the new Eton E1's;

- and a quiet location,

and a good set of antennas

When referring to a "great" or "good" antenna for general SW reception (not particularly the high frequency 10 - 30 meter bands), what did you have in mind, and what's considered a reasonable compromise? Prefer something that would be compatible with a house and lot in a typical urban neighborhood with deed restrictions against tall towers.

Jim

The basic rule of the quiz is that a US car driver has to go north
into Canada and then drive south in order to reach a part of the US
that is cut off from direct access by road. Ferries, swimming, and
boats are excluded. However, walking, motorcycling, bicycling,
wheelchairs and even a Morris chair with castors are allowed in order
to cover some unique situtions on the Maine- New Brunswick border.
The Bellingham-Victoria-Port Angeles circuit would work except for
the use of ferries.
The ferry ride to Campobello island in New Brunswick, notable as
the place where FDR summered and contracted polio, therefore excludes
that place.
Although it is a bit of a stretch, in order to get to Alaska, a
driver has to drive north through British Columbia and the Yukon, then
cross into Alaska and then drive south to Anchorage and Homer.
The 90-mile stretch of land in New Brunswick that runs from Grand
Falls to Fosterville is noted for towns, buildings, and outhouses that
are divided by the Canada-US border. There may be a few enclaves of US
territory that are isolated in Canada, but I understand that these are
being connected by new roads, paths, and walkways. Homeland Security
is doing its best to eliminate these anomolies.
This whole thing was started by Cuhulin, who noted that you had to
drive south from Detroit to get to Canada.

Obviously, when the storm hits and the electricity is off and the
radio station antennas are blown down, you will need shortwave radio
to know what's going on. Brother Stair, Pete Peters et al can offer
some last-minute advice on what to do as the crazed mobs rush toward
your bunker, thinking it a hoard of desperately-needed food and water.
Only let in attractive, nubile teen-agers. At last you will have
something going for you if you play your cards right and can remember
what to do.
PS. Only let in the girls or the boys, as is your wish, but not both.

No, he said that he sold a large collection of radios. His receiver
needs as defined were modest - for general SWLing I think was the
term. Most of us can listen to a lot of shortwave stations on the
receivers I provided.

>
> That implies he is asking about a better than average receiver.

There was no such inference that I could read.

I can't read into his intentions beyond what was stated. Some people
will spend $2,000 and more on a middling shortwave receiver like a
Sony CRF320.

If I build a storm shelter in my back yard,I don't plan on living in the d..n thing.Only a space for doggy and I to get in and sit there for a while untill the tornado threats are over.I would keep a goody bag in there with a little battery powered flouarescent light and one of my little portable AM/FM/Shortwave radios.I can stick up an antenna by the storm shelter and let the antenna wire dangle down into the storm shelter.The neighbors would have to shift for themselves,my storm shelter would only be big enough for my little doggy and I.

On a subterranean storm shelter I would also be concerned about
sealing the door itself and about providing air, water, etc. 4x4x6
shelter would be pretty tight for more than an hour or two wouldn't
you think. Do you live in the coastal hurricane country? If so going
below ground would not seem to be a very good idea to me.

There have been storm cellars on the prairies for 150 years. All you need is a hole in the ground and a door. It is nice if you have a hill to dig into but a few loads of fill will make one cheaply. All that concrete and blocks sounds like a lot of work for a short stay. The English used a small quonset hut during the Blitz: Maybe you can get some ideas there.
You could use a gravel base to help drainage. The idea is to built it with the least cost yet have it effective.

No kiddin'. I have heard plenty of stuff on my R75 here in suburban CA, USA to be sure, but back in rural New England as a teenager, I heard practically as much on a Radio Shack Astronaut-8 and 50 feet of wire, just because the noise background was about 30-60 dB lower than here.

Dear John,

I would hate to be put in a position where I could have only one shortwave receiver but, if such were the case, I would keep my AOR AR7030 Plus. Mine was factory-customized and, as I had to order it through an English shop (THE SHORTWAVE SHOP - a "class" outfit if there ever was one!), the price was somewhat more than $2000.00 (due to the exchange rate and customs). However, if I had to abide by your cutoff rules, even a "standard" AR7030 Plus would be better than anything I had ever experienced previously or even considered buying, and I have been a shortwave listener for almost fifty years now. I firmly believe this is absolutely the finest shortwave radio ever designed.

I'm going to tell you something, however - if I were forced into owning just ONE shortwave receiver - as I said, it would be the AR7030 Plus - I would find a way to "hide" a Sony ICF-SW7600GR as well! (So I would actually own TWO shortwave radios!) This, in my opinion, is the best small portable shortwave radio currently being manufactured and is favorably comparable in performance to any other out there and it is far better in terms of construction quality and price.

I'm glad this is only a mind exercise on our part - the thought of owning just ONE shortwave receiver is too unpleasant to bear!

Best,

Joe

The Peaceful Majority

Some history to think about and history does repeat itself!
Land of the Free-Because of the Brave!

I used to know a man whose family was German aristocracy prior to World War Two. They owned a number of large industries and estates. I asked him how many German people were true Nazis, and the answer he gave has stuck with me and guided my attitude toward fanaticism ever since.

"Very few people were true Nazis," he said. "But many enjoyed the return of German pride, and many more were too busy to care. I was one of those who just thought the Nazis were a bunch of fools. So, the majority just sat back and let it all happen. Then, before we knew it, they owned us, and we had lost control, and the end of the world had come. My family lost everything I ended up in a concentration camp and the Allies destroyed my factories."

We are told again and again by "experts" and talking heads that Islam is the religion of peace, and that the vast majority of Muslims just want to live in peace.
Although this unqualified assertion may be true, it is entirely irrelevant. It is meaningless fluff, meant to make us feel better, and meant to somehow diminish the specter of fanatics rampaging across the globe in the name of Islam. The fact is that at this moment in history the fanatics rule Islam. It is the fanatics who march. It is the fanatics who wage any one of 50 shooting wars worldwide. It is the fanatics who systematically slaughter Christian or tribal groups throughout Africa and are gradually taking over the entire continent in an Islamic wave. It is the fanatics who bomb, behead, murder, or "honor" kill. It is the fanatics who take over mosque after mosque. It is the fanatics who zealously spread the stoning and hanging of rape victims and homosexuals. The hard quantifiable fact is that the "peaceful majority" is the silent majority, and it is cowed and extraneous.

Communist Russia comprised Russians who just wanted to live in peace, yet the Russian Communists were responsible for the murder of about 20 million people. The peaceful majority was irrelevant. China's huge population was peaceful as well, but Chinese Communists managed to kill a staggering 70 million people.

The average Japanese individual prior to World War 2 was not a warmongering sadist. Yet, Japan murdered and slaughtered its way across South East Asia in an orgy of killing that included the

systematic murder of 12 million Chinese civilians; most killed by sword, shovel, and bayonet. And, who can forget Rwanda, which collapsed into butchery. Could it not be said that the majority of Rwandans were "peace loving"?

History lessons are often incredibly simple and blunt, yet for all our powers of reason we often miss the most basic and uncomplicated of points: peace-loving Muslims have been made irrelevant by their silence. Peace-loving Muslims will become our enemy if they don't speak up, because like my friend from Germany, they will awake one day and find that the fanatics own them, and the end of their world will have begun.

Peace-loving Germans, Japanese, Chinese, Russians, Rwandans, Serbs Afghans, Iraqis, Palestinians, Somalis, Nigerians, Algerians, and many others have died because the peaceful majority did not speak up until it was too late. Lets quit laughing at and forwarding the jokes and cartoons, which denigrate and ridicule our leaders in this war against terror. They are trying to protect the interests and well being of the US and it's citizens. Best we support them before it's too late.

Dear Sir,

I have indeed found the AN-LP1 to be highly direction on 49 meters and below. I have three windows in one of my "listening rooms," one of which is aimed 90 degrees away from the others. When moving the antenna to that window, a noticeable effect is noted on weaker signals. In practice, of course, when listening to the much stronger signals for which it is appropriate to use this radio/antenna combination, the directionality becomes of much less consequence and, on 41, 31, 22, 25, and below, there is no effect whatsoever that I can detect.

You are correct when you state that the Sony ICF-SW7600GR is packed with a wind-up antenna. However that antenna must be clipped to the Sony's whip; there is no plug by which one can attach that antenna to the Sony's antenna jack. I have found that, on the shortwave bands, a direct connection through the jack works better than a connection via the whip. That is my personal experience. I have tried my Sangean ANT 60 both ways (one can attach that antenna either to the jack or to the whip) and the jack connection works better.

Best,

Joe

Dear Sir,

You are correct - the Sony's whip does work well but, as the radio is apparently designed to be able to handle a fairly significant external antenna (it has a good dynamic range for a portable), the radio's sensitivity with that whip leaves a bit to be desired if one wishes to listen to somewhat weaker shortwave signals. An auxiliary antenna makes a significant difference in my experience and the best one, in my opinion, is the AN-LP1.

Best,

Joe

Hello all,

Yes, AN-LP1 is a great antenna... Is it directionnal ? Hum... I did not see any mesurable improvement by rotating the antenna on site (without changing windows I mean). On lower frequencies, it is a great performer, but above 15 MHz, an external longwire can beat it easily... I have both and use the antenna that gives the better performance on a given situation.

The Sangean reel antenna is 7m long, that is 2 more meters than the Sony that gets clipped on the whip. I have both and yes, the 2 additonal meters can help, although not by a lot... The jack connection is said to improve reception as well, but again, nothing noticable...

All those were tested on a Sangean 909 and a Sony SW100, not the 7600GR.

Those facts only reflect my OWN PERSONNAL experience and opinion only. I don't intend to be a reference on the matter. Other people may experiment other results...

Hope this helps,

Charly

Ebay usually has someone selling packs of tobacco seeds. The difficulty is in curing the tobacco so it is "smoke-able."

If not cured correctly it'll burn your throat out! Trust me, curing is the most difficult aspect of do-it-yourself-tobacco.

I ended up building a special box which provides heat and moisture at the proper levels to cure the tobacco. Instructions can be found on the net.

You will recall that there were two US enclaves in Canadian territory
that you had to drive north into Canada and then south to get to them.
They were the northwest angle in Minnesota and Point Roberts in
Washington. They were cut off from road access through the US.
Well, there is another one. It is very hard to find as it is off
most of the highway maps.

Clue #1...It is about 1000 miles north of Vancouver, B.C.
Clue #2... It is on the Canadian-US border
Clue #3... It has a population of about 100

You have to be very good to find this town. If you want to get away
from everything, this is the place to do it.

What gets me is the people who worry about cigarette smoke have no worries about traveling down the freeway in a river of toxic exhaust.

I mean, really, think about it. You can spend a week in a garage packed with smokers until your eyes are burning out of your head--leave the garage and go about living a normal lifespan. Lock your self in the same garage for an hour with an idling car and you can expect to come out with brain damage or dead.

And, when you travel down the freeway after thousands-of-thousands of cars have just passed before you, all those cars spewing hundreds of cubic feet of toxic emissions per time period--and you DON'T think major damage is being done to your lungs, brain and health?

From what I have seen, cigarette smoking, per capita, is way down, however lung cancer has steadily climbed each and every year. I'd say there is a much closer relationship to lung cancer to some other pollution in our environment than cigarette smoking.

Now, all that said, I think smoking is bad. I would never start today knowing what I know now--I am 56 and started smoking when I was 12.

But, on the scale of things, there are much greater damage than second hand smoke to worry about ...

There is another that you have forgotten - Alburgh, VT is another US
enclave that can only be reached by water (Lake Champlain) or by driving
north into Canada then back south.

Has anyone tried this new product? I saw it tonight selling for $49.95 at a local RS store here in Virginia . About the same size as the GE SR series, the Extreme Long Range radio features digital LED frequency display and direct entry. Build quality appears to be excellent. BTW, my Sony 7600 GR blows away my SR III as an AM BCB dx receiver.

Well, it looks like Hyder Alaska, and Stewart B.C. have like a joining
of communitys of some sort. Being so isolated and they are only two
miles apart, even though one is in the U.S. and the other in Canada, I
bet there are a lot of cross border marriages. I like visiting the
wilderness for a week or two, but being so isolated for months or
years at a time??? I don't think so...
Take a look here.... http://www.stewart-hyder.com/

4869. make $10000 in 30 days legally

Newsgroup: rec.radio.shortwave

Source record: 106818

THE FAST AND EASY WAY TO MAKE OVER $10,000. 100% LEGALLY

Make over $10,000 a month, using PAYPAL and a proven process, with just a $6.00 investment. That's right, just six dollars invested. It's easy, quick and simple, and can be repeated whenever you want.
How many times do you want to make over $10,000? You choose.
You just need to read this simple and clear report, follow the rules and move quickly on this one.

Ok, a little while back, I was browsing through newsgroups and message boards, and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investment of $6.00! So I thought, "Yeah right, this must be a scam", but like most of us, I was curious, so I kept reading. After consulting with some friends, they themselves heard about this but were, like me sceptical about the idea. So I thought to myself "why not give it a try, its only $6, I mean I've spent more than that on lunch!" So I gave it a try and OH MY GOD!!! Trust me, the results were staggering!
Let's cut the boring part and get straight into it.
This can be done by anyone in the world.
PAYPAL VERIFIES THAT THIS BUSINESS PROGRAM IS 100% LEGAL AND IS A BIG HIT, TAKES JUST 15-30 MINUTES AND A SMALL $6 INVESTMENT.
This project has been on TV programmes such as 20/20, Oprah, and the Wall Street Journal.
It's been in existence in many forms for at least a decade.
The entire process is FAST, EASY and VERY, VERY LUCRATIVE.
I WAS SHOCKED WHEN I SAW HOW MUCH MONEY CAME FLOODING INTO MY PAYPAL ACCOUNT I turned $6 into over $10,000.
I will GUARANTEE that you will enjoy a similar return!
The only things you will need are:
1. An email address.
2. A Business or Premier PAYPAL account (FREE)3. Just 20 to 30 minutes of your time.
This program takes just half an hour to set up. After that, there is absolutely no work whatsoever to do on your part.
You have absolutely NOTHING to lose, and there is NO LIMIT to the amount of income you can generate from this one single business program.
Let's get started, just follow the instructions exactly as set out below and then prepare you for a HUGE influx of cash over the next 30 days! Here's what you need to do.
STEP 1: Setting up your FREE PAYPAL Account
It's extremely safe and very easy to set up a FREE PAYPAL account!
Copy and paste the following link exactly into the address bar:
https://www.paypal.com/uk/mrb/pal=EPD2QXJ3BLX9G (notice the secure

"https" within the link)
Be sure to sign up for a FREE PREMIER or BUSINESS account (and not a PERSONAL account) otherwise you won't be able to receive credit card payments from other people.
STEP 2: Sending PAYPAL money
To give means to receive, and receive you will. Many waste $6 on nothing of use. You'll make over $10,000 with the $6 you invest.
To send money, all you do is click on 'send money' located in blue at the top of the page next to 'welcome'.
Now all you have to do is send $1.00 by way of PAYPAL to each of the email address below.
Make sure the subject of the payment says... "PLEASE ADD ME TO YOUR MAILING LIST".
(this keeps the program 100% legal... so please don't forget!)
These are the e-mail addresses you send $1 to. (That is $1 to each email address.)
1) mini_me_6th@hotmail.com
2) richter@webspan.net
3) alders_elite@hotmail.co.uk
4) KoolJas17@hotmail.com KoolJas17@hotmail.com
5) mardell87@hotmail.co.uk
6) geniou5@optonline.net
Remember, all of this is ABSOLUTELY LEGAL! You are creating a service! If you have any doubts, please refer to Title 18 Sec. 1302 & 1241 of the United States Postal laws.
STEP 3: Adding Your Email Address
After you send your $1.00 payment, to each email on the list above, Take the #1) email off the list that you saw above, move the other addresses up one - (#6 becomes #5 & #5 becomes #4 and #4 becomes #3 & #3 becomes #2 and #2 becomes #1. etc)
Now add YOUR email address (the one used in your PAYPAL account) to position #6) on the list.
*** MAKE SURE THE EMAIL YOU SUPPLY IS EXACTLY AS IT APPEARS IN YOUR PAYPAL ACCOUNT SO YOU CAN GET PAID ***
STEP 4: The Pure Joy of Receiving PAYPAL Money!
You are now ready to post your copy of this message, to at least 50-200 newsgroups, message boards. I post to 200 for quicker surer results. There are close to 32,000 news groups, this makes it easy for you to earn money.
All you need is 200 news groups, but the more you post, the more money you make - as well as everyone else on the list!
In this situation your job is to let as many people see this letter as possible. So they will make you and me rich and of course themselves!!! You can even start posting the moment your email is confirmed. Payments will still appear in your PAYPAL account even while your bank account is being confirmed.
DIRECTIONS: HOW TO POST TO NEWSGROUPS & MESSAGE BOARDS
You do not need to re-type this entire letter to do your own posting. Simply do the following:
STEP 1: Put your CURSOR at the beginning of this letter and drag your

CURSOR to the bottom of this document, and select 'copy' from the edit menu. This will copy the entire letter into your computer's temporary memory.
STEP 2: Open a blank 'Notepad' file and place your cursor at the top of the blank page. From the 'Edit' menu select 'Paste'. This will paste a copy of the letter into notepad so that you can add your email to the list.
STEP 3: Save your new Notepad file as a .txt file. If you want to do your postings in different sittings, you'll always have this file to go back to.
STEP 4: Use Netscape or Internet Explorer and try searching for various newsgroups, on-line forums, message boards, bulletin boards, chat sites, discussions, discussion groups, online communities, etc.

EXAMPLE: Go to any search engine like yahoo.com, google.com, altavista.com, excite.com - then search with subjects like? Millionaire message board? Or? Or? Opportunity message board? Or? Money making discussions? Or? Business bulletin board? Or? Money making forum? etc. You will find thousands & thousands of message boards. Click them one by one then you will find the option to post a new message.
STEP 5: Visit these message boards and post this article as a new message by highlighting the text of this letter and selecting 'Paste' from the 'Edit' menu. Fill in the Subject, this will be the header that everyone sees as they scroll thru the list of postings in a particular group, click the post message button. You're done with your first one! Congratulations! THAT'S IT!! All you have to do is jump to different newsgroups and post away. After you get the hang of it, it will take about 30 seconds for each newsgroup!
REMEMBER, THE MORE NEWSGROUPS AND/OR MESSAGE BOARDS YOU POST IN, THE MORE MONEY YOU WILL MAKE!!!
That's it! You will begin receiving money within days!
JUST MAKE SURE THE EMAIL YOU SUPPLY AND PUT AT THE BOTTOM OF LIST ABOVE, IS EXACTLY AS IT APPEARS ON YOUR PAYPAL ACCOUNT SO YOU GET PAID.
WHY IT'S EASY TO MAKE $10,000 CASH: OK, lets say I receive only 5 replies (a very low example). So then I Made $5.00 with my email at #6 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 posting, each with my email at #5 and
only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my email at #4 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my email at #3 and only receive 5 replies each, I will make an additional $625.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my email at #2 and they only receive 5 replies that just made me $3,125.00!!! Those 3,125 persons will all deliver this message to 200 newsgroups with my email at #1 and if still 5 persons per 200 newsgroups react I will receive $15,625.00! $15,625.00! from an original investment of only $6.00! AMAZING!!

When your email is no longer on the list, you just take the latest posting in the newsgroups, and send out another $6.00 to emails on the list, putting your email at number 6, after sending your $1 payments and start posting again.
The thing to remember is, thousands of people all over the world are joining the internet and reading these articles everyday, JUST LIKE YOU are now!!
All this takes is $6, which most people waste on nothing really important anyway.
IT REALLY WORKS!!!
There are tons of new honest users and new honest people who are joining the internet and newsgroups everyday and are willing to give it a try. Estimates are at 20,000 to 50,000 new users of the Internet, every day.
What will happen over the course of 30 days? Well, this money will be sent to you by a few thousand people just like yourself, who are willing to invest $6.00 and around 30 minutes of their time to receive around $10,000 or more in cash. The first payments will arrive within a few days and then they will continue at the rate of about 100 payments per day for about 30 days (obviously this will depend on how quickly you act and how quickly people take you up on this offer and then pass it on). After that time, the volumes of payments begin to taper off as your email is removed from the No 1 position. That's all you need to do!
There will be around $10,000 in payments waiting for you in your PAYPAL account within the next few weeks. $10,000 for just 30 minutes work! This is real money that you can spend on anything you wish! Just deposit it to your own bank account or spend it directly from your PAYPAL account!!! It's just that easy!!!
Send your emails only to people who are likely to want to participate and move quickly on this.
Remember, play FAIRLY and HONESTLY and this will work. This really isn't another one of those crazy scams! As long as people follow through with sending out $6.00, it works!
Remember, play FAIRLY and HONESTLY and this will really work. There's no use trying to cheat for only $6.00 Please. Use only opt-in resources for this material it will work for you and it works much faster without soliciting or spamming and has higher responses!!!
N.B. REMEMBER, IT IS 100% LEGAL! AND THE MONEY YOU CAN MAKE IS REALISTIC. DON'T PASS THIS UP
SOME EMAIL TESTIMONIALS RECEIVED.
"I followed the instructions just 2 weeks and 4 days ago, and although I haven't made 10 grand yet, I am already up to $6,135. I am absolutely gob smacked".
Mr. A baker, Leicester.
"Well what can I say? I sent out 40 emails like the plan said then I just forgot about the whole thing. To be honest, I didn't really think anything would come of it, but "I checked my PayPal account a week later and there was over $3000.00 in it!!!"
Robert, New York.

"After 30 days I now have over $11,000 to spend".
L. Wang, Northampton.
"I was shocked when I saw how much money came flooding into my PayPal account. Within 3 weeks my account balance has ballooned to $7,449"
Shirley Wicks, Ontario.
Send this to others, regardless of wherever you go ahead or not, they may want to make over $10,000 even if you don't! This business actually works! Even if you think 'nah this sounds like a scam' PASS IT ON! There are people out there who can see through the 'nah this sounds like a scam' rubbish and actually see the MAJOR benefits this system can really make!
Just copy and paste the link into the address bar of your web browser and away you go.
https://www.paypal.com/

WITH WARM WISHES, GOD BLESS YOU ALL AND YOUR LOVED ONE'S.

Yes, Hyder AK is the place I had in mind. Their website is awesome.
You can get the full effect of Alaska without having to take that long
trip through the Yukon. I wonder how many other places have similar
situations. I bet there are some on the Maine/New Brunswick border but
they would be to small to show on a map.

Since they are sort of cut off from the rest of Alaska because of no roads, etc. Hyder, which is in the U.S., long ago established a close connection with Stewart, just across the border in Canada. They use Canadian money; set their watches to Pacific Time over Alaska Time, use a B.C. area code and the children attend school across the border in Stewart.
Sort of an unusual situation, but similar situations used to exist along the Maine, U.S./ New Brunswick, Canada border. Joint U.S./ Canada communities, used to tell their respective governments to leave their communities alone during the War of Independance and the War of 1812. These folks were related to each other through marriages, friendships, trade, the fact that they lived in different countries meant nothing to them. They took care of themnselves, and didn't care for their governments interfering with their lives much. Just their luck that an international border ran right through the middle of their villages and communitys. They lived in their own little worlds. Your neigbors in the next country where only a few minutes to an hour walk away perhaps, while the big cities were days or weeks of travel through the wilderness, or down rivers to get to before modern means of travel. Lots of families with some kin that were Canadians, and some that were Americans. It still happens in some isolated areas I suppose.

Can You Tell "The Weather" by 'how' your Antenna Wire Looks ?

OK so i have this 7-Strand 18 AWG Antenna Wire with 6-Red
Strands and 1-Green Strand; and it is strung-out about 50-Feet
in from of the Upper Bedroom Window looking West.

Clear Sunny Days - The Antenna Wire is Straight and Shiny Red.

Over-Cast Days - The Antenna Wire is Straight but Dark Looking.

Rainy Days - The Antenna Wire is Straight and Grey Looking.

Dry Power Snow Days - The Antenna Wire has a 2-4 Foot Sag
and is about a Half and Inch Round and White Looking.

Wet Icy Snow Days - The Antenna Wire has a 5-6 Foot Sag
and is about an Inch Round and Blue-White Looking.

Right now with this new Pacific Storm coming through
there is 5-6 Foot Sag in the Antenna Wire.

So... What's Your Antenna Wire Telling You ? ? ?
- - - About the Weather Outside ? ? ?

While it is true that the various Alburghs are located on a peninsula
sticking down from Quebec, and you can drive north and then drive
south to reenter the US, there is no need to do so as there are good
roads that serve the area. For example, Highway 2 connects west to
Rouses Point and south to Hero, and HWY 78 runs east. We are looking
for places where you MUST drive through Canada to get to US territory,
not where you can drive through. There are lots of places like that.
So no cigar on Alburgh.

Multi Level Marketing, Pyramid Schemes, Matrix Programs and Trading
Schemes Policy

You may not use PayPal to send or receive payments for any form of
multi-level marketing programs, as well as matrix, pyramid schemes
(including, without limitation, online payment randomizers), "Ponzi"
schemes, "get rich quick" schemes, "Autosurf" programs, High Yield
Investment Programs (HYIP), or other similar trading schemes. These
types of schemes can be highly problematic and are regulated in the UK
by the Fair Trading Act 1973, as amended by the Trading Schemes Act
1996 and the Trading Schemes Regulations 1997. It is illegal to
persuade someone to make a payment into a scheme by promising benefits
if they recruit further people.

Multi-Level Marketing
Multi-level marketing plans, also known as "network" or "matrix"
marketing, include any business in which a person receives proceeds
from his or her own sales of goods or services as well as those of
recruited members. Similarly, PayPal prohibits as a Multi-Level
Marketing plan any business in which payouts occur at two or more
levels (both by the individual who actually sold the product as well
as by the person(s) "upline" that recruited the selling individual).
PayPal prohibits Multi-level Marketing plans whether or not they are
legal under the laws of one or more jurisdictions.

Pyramid and Ponzi Schemes
Pyramid schemes, including "Gifting Clubs", involve the exchange of
money in relation to the process of enrolling other people into the
scheme. PayPal includes in its definition of "pyramid schemes" any
system in which a hierarchy is created by people joining under others
who joined previously, and in which those who join make payments to
those above them in the hierarchy ("upline"). PayPal considers online
payment randomizers to be a type of pyramid scheme because the
majority of commissions are paid for recruitment of new members, and
typically operate by random placement within the program.

Ponzi schemes involve a system in which existing members of a program
receive payouts that are largely funded by new payments into the
program. The source of these new payments into the program can either
be from new members paying to join the program or from existing

members contributing more money to the program.

Matrix Programs
PayPal prohibits as a "matrix program" any business model that involves the exchange of money primarily for the purpose of being added to a waiting list for a product. In these instances, the individual at the top of the list receives the product only after a set number of people have joined below him or her.

"Get Rich Quick" And Other Related Schemes
Get Rich Quick schemes include any type of self-employment, start-up businesses, or investment opportunity where the claims of profit or returns on investment are unrealistic or unsupported.

In determining whether a website or account violates our Multi Level Marketing, Pyramid Schemes, Matrix Programs and Trading Schemes Policy, PayPal will consider some or all of the following factors:

Offering commissions to recruit new members
Requiring new distributors to purchase costly inventory or "start-up kits"
Members' profits are derived from recruiting new members or from the sales of newly-recruited members ("downline"), rather than their own sales
Payouts are funded through money paid into the system by new or existing members
Money paid into the system is significantly greater than money paid out
Unrealistic or unsupported promises regarding profits/return on investment
Percentage of an entity's goods or services which are sold by a non-distributor
Businesses warned against by any regulatory body or agency
Flow of money derived from new members predominantly moves "upline"
Preservation of the business rests on the exponential growth of new members or customers
Speculative real estate or non-development property

SK,

I think what you are talking about is the RadioShack
"High-Performance PLL Tuning AM/FM/WX Radio"
which is Priced at $49.99

http://www.radioshack.com/product/index.jsp?productId=2472950&cp

RadioShack Catalog # 12-150

Nothing really 'extreme' about it :

* AM / FM / WX Radio with Long-Range Performance and High
Sensitivity

* 10 AM, 15 FM and 5 WX Radio Memory Presets

* Digital LCD Display so you can easily tune to radio stations

* Auxiliary input for additional line-in sources

- - - unless you are carrying on on your shoulder to
catch some tunes while performing at the X-Games !
http://en.wikipedia.org/wiki/X-Games

most likely a RadioShack semi-clone of the CCRadio ~ RHF

Just like the Grundig S350, CCradio, and SR III this radio is all hype - it is an S350 look-alike and has the same cheap crap plastic casing and smelly imitation-leather handle. There was a review on eham.net, where a guy's RS 12-150 WX radio failed the first day, because his wide/narrow switch shorted out. All of these super-duper DX machines perform the same as most decent AM/FM radios.

I've heard it is not a bad receiver, but I if their description says "
Extreme Long Range" it is a hyperbolic overstatement. Maybe the
Panasonic RF2800 style handles are supposed to make it look like a
serious machine. Someone did a side-by-side comparison here and
concluded the GE Superradio is a marginally better receiver.

Some decades back I went through U.S. customs and immigration at
Toronto airport. So I was the object of U.S. law enforcement not only
surrounded by Canada but in Canada.

I don't think that there are any passenger trains left but doesn't the
Canadian Pacific run sealed trains (no one and nothing can get on or
off) across Maine?

On the other hand, the CN took the hard route over the Canadian shield
and avoided U.S. shortcuts and I think there was some fear that
Manitoba and Saskatchewan farmers would send their grain to
Minneapolis or Chicago instead of Toronto and, thus, the Canadian
Great Plains would become an economic part of the U.S.

In 1969,I had a gall stone operation at St.Dominic's Hospital.
www.stdom.com At the time,I had Blue Cross Insurance.I cleared almost
$700.00 on my big old gallstones.(I still have my old two round birds
egg size gallstones,they are in a plastic pill bottle in my bedroom) I
wish I had a lot more gallstones so I could get some more
''entitlements''.

4913. Degen/Kaito 1121 vs 1103

Newsgroup: rec.radio.shortwave
Date: 2007-02-27 17:25:49 UTC
From: mpd <mdovell@comcast.net>
Message-ID: <1172597149.548275.243230@m58g2000cwm.googlegroups.com>
Source record: 106912

I like having a portable for shortwave and my current 1103 has knob problems (I've tried to fix it and only screwed up the antenna a bit)

I work a constantly changing schedual and not all the content I listen to has podcasts (the stuff that does is radio netherlands, radio japan, derry brownfield, radio sweden, deutchwelle's moneytalks).

I think the build quality of the 1103 was great until the knob sort of went...I hear what I have was a earlier model and it's not so much of a problem....

Does the 1121 work as well on the SW was the 1103? I'm thinking it might be worth the extra just to be able to record....is the bands the same amount in terms of tuning?

thanks

I never buy any Lard at the stores.But,there is Lard in many of the food products we consume.Look at the Ingredients listings on the food products you buy.I almost never eat any sweets such as sweet pastries and candy.Mostly,I eat lean and I trim all of the fat (read that,Lard) off of all meat I buy and I throw the fat away,I don't even let my little doggy eat any fat.The reason I am fat nowdays is because I have become too much of a couch potato,I really need to get out more,or at least excecise.Also,I have always had a Thyroid problem and that does not let my body burn as many calories as it should.All of my family members are regular normal size people.
Now,you be sure to lay off of that Lard that is in anything you eat.

I had the piece-of-shit S350 and returned it to RS a yeat ago - all of
my other AM/FM radios, including my car radio, get the same stations.
Never again, will I buy Grundig/Tecsun/Eton Chinese-made garbage ! The
WX and S350 have the same cheap, over-sized, mostly-hollow cases !

"In-Stat: Digital Radio Set to Take Off"

"In 2006, 73 percent of respondents to an In-Stat U.S. consumer survey
were aware of HD Radio on some level."

http://beradio.com/eyeoniboc/instat-digital-radio-set/

"Sirius, XM, and HD: Consumer interest reality check" (Alexaholic)

"While interest in satellite radio is diminishing, interest in HD
shows no signs of a pulse."

http://www.hear2.com/2007/02/sirius_xm_and_h.html#comments

This just confirms, the lack of interest for HD Radio, on Google
Trends:

http://www.google.com/trends?q=%22hd+radio%22%2C+xm%2C+sirius&ctab=0&geo=all&date=all

"Rethinking AM's Future"

"Only 175 or so AM stations have even licensed AM-HD. For a number of
reasons, quite a few have tried it and taken it off the air, or so the
anecdotal evidence suggests. Ibiquity no longer reports in its public
summaries whether a station is on the air."

http://www.rwonline.com/pages/s.0044/t.557.html

For now, HD Radio/IBOC is dead.

4944. Software for the Drake R8B: SWLog 5

Newsgroup: rec.radio.shortwave
Date: 2007-02-27 20:24:15 UTC
From: Larry Dighera <LDighera@att.net>
Message-ID: <ph49u2t849bg6hbqksieu3jrtb0cce6bii@4ax.com>
Source record: 106943

I started the SWLog V5 (build 2609) install on a 3.2GHz XPHome laptop. I was reluctant to install it on the laptop, because it lacks an RS-232 port, and would require the use of a USB to RS-232 adapter. I'm happy to report, that the Future Technology Devices International Ltd. <http://www.ftdichip.com/> product functions flawlessly with MS-WinXP-Home and SWLog V5 (build 2609).

SWLog is the best of the lot of computer-based radio control programs I've had an opportunity to evaluate. Ergo4 has a few nice features, and RxPlus seems to have even more, but SWLog seems the most feature-rich and stable of the three.

SWLog does a lot more than either of them, and it's stable with a solid feel, unlike other similar software. SWLog's installation can be daunting, and, once installed, populating the databases is tedious, but the rewards are awesome! Not only does SWLog do all the things you'd expect it to do, it supports ~50 receivers, provides useful recording means, and it enables operation of the radio receiver over TCP/ip! Well done! The layout is reasonable and graphically pleasing. Operation is smooth. And it provides a lot of _USEFUL_ tools for the Short Wave Listener. And unbelievably, it's author, Bob Sillett, has generously chosen to provide his work absolutely FREE! What a guy!

As I acquire more experience using SWLog, I'll keep you apprised of my opinions. So far, SWLog appears to be the software of choice for SWLing with an R8B.

I've yet to properly evaluate HamRadioDeluxe. It seems to be geared more toward armature radio than SWLing.

Unfortunately, TK75 doesn't support the R. L. Drake R8B receiver.

Mark Fine's Smart R8 Control 32 v3.23 might be equivalent to SmartIcomControl, but for the Drake R8 series of receivers. It seems to permit editing the Drake R8B's 1,000 hardware memory presets directly. That would be useful. There's a copy available here: http://www.nfbnet.org/download/hams.htm .

DXtra's WorldStation 4.1 <http://www.dxtra.com/> Supports the R8B, but I wasn't able to locate an evaluation download.

4947. Hillary Clinton Removes Chinese Spy Essay From DNC site & Google archives

Newsgroup: rec.radio.shortwave
Date: 2007-02-27 20:37:32 UTC
From: ".Guerite" <aim@their.org>
Message-ID: <12u95j1eru10s6c@corp.supernews.com>
Source record: 106946

[Click and READ all links to understand the complex web of Hilary R. Clinton and the Democratic Party propaganda lies and deceit.]

A former high-ranking CIA official refused FBI appeals for help in tracking Chinese spies and urged others via e-mail not to cooperate because of the recent prosecution of former Defense Intelligence Agency analyst Ron Montaperto [see ties with Hillary Clinton below].

Robert G. Sutter, a former national intelligence officer for East Asia and holder of a security clearance, told a mailing list of current and former government officials that a 2003 FBI "sting" operation against Montaperto, who was convicted in June of mishandling classified documents, raised fears that he and other officials could be damaged for discussing their contacts with Chinese officials.

The FBI and other U.S. counterintelligence agencies are stepping up efforts, including outreach to academics, to counter Chinese intelligence efforts after a string of damaging spy cases over the past five years, U.S. officials said.

Mr. Sutter, a Georgetown University professor [is he an elected official executing State policy? - LOL], stated in the e-mail sent two weeks ago that he had met then with two "relatively young" FBI agents who asked for his help "regarding activities of Chinese officials that I judged might be deemed matters of espionage."
...
The Washington Times obtained a copy of the e-mail from a member of the group.

Mr. Sutter stated that his recent meeting with FBI agents was similar to debriefings in the 1970s and 1980s, when he volunteered to share intelligence on meetings with European and Chinese officials.

"My reaction this time was very different than my reaction in the 1970s and 1980s," he stated. "I still have a security clearance, but this time I said almost nothing about China."

"What I did talk about was the credibility of the FBI " Mr. Sutter said. "I referred at some length to the Ron Montaperto 'sting.' I told the agents that while they seemed like nice people, and I tried to be cooperative with the U.S. government, I could not trust them or have any assurance that they would not use any information I provided in some way that would hurt me or others."
...

China-Hamas links

A Chinese intelligence officer is engaged in covertly aiding the ruling Palestinian Hamas terrorist group, according to a Paris-based intelligence newsletter.

Gong Xiaosheng was identified as a Ministry of State Security (MSS) official who has worked out of Ramallah since November 2002, Intelligence Online reported in its June 9 edition.

The report said Mr. Gong is a "strategic agent" who was trained in Division 8 of the ministry and also at the China Institute of Contemporary International Relations (CICIR), an MSS think tank whose Middle East section is headed by Jin Ruikun, a specialist on Palestine and Jordan, and Chen Shuanqing, a specialist on Israeli-Palestinian relations and Israel's Likud Party.

The institute produces in-house studies for Chinese communist and military leaders and predicted... that Hamas would win the Palestinian elections.

According to the report, Mr. Gong in the past was constantly seen in the company of Palestinian leader Yasser Arafat but has since begun helping Hamas.

Mr. Gong arranged an invitation to China for Mahmud al-Zahar, the Hamas foreign minister to take part in a China-Arab Cooperation Forum in Beijing last month.

Unlike the United States and other Western governments who rightly view Hamas as a terrorist organization, China was quick to recognize the new Palestinian government ruled by Hamas.

[last item]
http://washingtontimes.com/national/20060615-111752-3841r_page2.htm

Ronald Montaperto, the former Pentagon Defense Intelligence Agency analyst during Impeached Clinton's administration who admitted to spying for Communist China gave Communist China information from which they could have knocked out America's efforts to uncover their arms sales to terrorist states. According to one unnamed official, thanks to Montaperto, "The Chinese learned from the leaks where the information was coming from and within weeks or months the [communications] links were lost".

http://www.washingtontimes.com/national/20060908-120420-6227r.htm

Less than one day after it was revealed that high-ranking intelligence officer Lonnie Henley publicly came to the defense of admitted spy Ronald Montaperto, Bill Gertz (Washington Times) reported that Henley himself is under investigation. Henley's he-didn't-really-spy-that-much argument exposed just how far "engagement" supporters were willing to go to defend their fellows.

http://www.washingtontimes.com/national/20060705-114604-1901r.htm

Ronald Montaperto, former Defense Intelligence Agency analyst, pleaded
guilty to charges of passing secrets to the Communist Chinese People's

...
Montaperto's works until recently appeared on a DNC Web site right under the
display of Democrat leaders such as Hillary Clinton. The DNC has since
removed the essay and all links to Montaperto. However, a copy of the work,
taken right from the DNC page, was made available to this reporter...

Much more http://www.newsmax.com/archives/articles/2006/6/27/204007.shtml

"was part of an influential group of pro-China academics and officials in
the U.S. policy and intelligence community" admitted in court to "passing
'top secret' information to Chinese intelligence officials."

http://www.washingtontimes.com/national/20060623-120347-7268r.html

Ronald N. Montaperto is an author of many Pro-Communist Chinese propaganda
papers, essays and books.

http://www.amazon.com/s/ref=nb_ss_b/104-3400188-9466304?url=search-alias%3Dstripbooks&fiel
d-keywords=Ronald+N.+Montaperto&Go.x=12&Go.y=13
http://www.google.com/search?hl=en&q=%22Ronald+N.+Montaperto%22&btnG=Google+Search

Ronald N. Montaperto harshly criticizes anyone who raises questions about
the threat posed by Beijing's communist regime.

Who "IS" Ronald N. Montaperto?
Ask the "Democratic Leadership Council" & "PROGRESSIVE Policy Institute":

http://www.ppionline.org/ndol/ndol_ci.cfm?kaid=450004&subid=900021&contentid=1293

OOPs! Looks like Hillary Clinton removed Montaperto's Pro-Communist China
essay. Ah, but we still have the Google archives! But for how long
considering Google's willingness to censor their search engine in Communist
China? Have a look while you still can:

"Assessing the Chinese Military Threat by Chinese Spy Ronald N. Montaperto
for the "Progressive Policy Institute" and "Democratic Leadership Council"
lead by no other than Hillary R. Clinton."

[cut & paste Google archival link]
http://64.233.167.104/search?q=cache:uFbrlz__Oc0J:www.dlc.org/ppi/ppi_ci.cfm%3FknlgAreaID%3D450004%26subs
ecID%3D900021%26contentID%3D1293+Ronald+N.+Mon&#65533;taperto+Democratic+Leadership+Council&hl=en&gl=us&
ct=clnk&cd=6

Uh oh! In the Mao Tse Dung tradition; the Clintonista's pressured Google to
wipe out the archives.
A virtual cultural revolution by Hitlery Clinton herself.

"THE NEW DEMOCRAT CREDO:
In keeping with our party's grand tradition, we reaffirm Jefferson's belief
in individual liberty and capacity for self-government. We endorse Jackson's

credo of equal opportunity for all, special privileges for none. We embrace Roosevelt's thirst for innovation and Kennedy's summons to civic duty. And we intend to carry on Clinton's insistence upon new means to achieve progressive ideals.... "

YEAH RIGHT! - uh huh, sure!

Chair of the Democratic Leadership Council's American Dream Initiative: U.S. Senator Hillary Rodham Clinton
http://www.dlc.org/ndol_ci.cfm?kaid=86&subid=85&contentid=893

Its founder and still-president is Will Marshall III, co-founder and first Policy Director of the Democratic Leadership Council. A longtime friend of Clinton and a supporter of Al Gore...

AL GORE - The Global Warming specialist for the Communist Chinese. China is host to the most polluted cities in the world and is the most polluting country in the world when you calculate their CO2 emissions relative to GNP. Say Al! How did your Convenient Lies play in BeiJing?

During the collapse of the Soviet Empire, Mikhail Gorbachev promoted the so-called "Third Way" as an alternative to free markets. This new way of governing would be neither capitalist nor communist, but something in between. In a similar vein, President Clinton said in his 1998 State of the Union address, "We have moved past the sterile debate between those who say government is the enemy and those who say government is the answer. My fellow Americans, we have found a Third Way." This Third Way calls for business and government to join hands as "partners." As Clinton told the Economic Club of Detroit in February 2002, "We are working with business to use technology, research and market incentives to meet national goals. Some have called this political philosophy the Third Way." In short, Big Business would own the economy (as under capitalism), while Big Government would run it (as under socialism). Corporations would be persuaded to comply with government directives through subsidies, tax breaks, customized legislation, AND OTHER SPECIAL PRIVILEGES.

http://www.discoverthenetwork.com/groupProfile.asp?grpid=6901

The Democratic Party has been high-jacked by
Left-wing/Liberal/"Progressive"/Socialist/Neo-Communists!

God Save The Union!

That's what the hams get for trying to keep everyone else out of it
for so long, even when they knew radio theory, and for trying to keep
it their own little exclusive club wher only a very few people are
members, even though they don't know a thing about radio theory.

Keep people out for decades. Now there's a huge gap between the "old"
hams" and the "new" hams.

which means the die-off is coming, as you say.

No one was kept out. They kept themselves out through their refusal to learn the
code.

4969. RADIO LIMERICK ONE

Newsgroup: rec.radio.shortwave
Date: 2007-02-27 21:40:33 UTC
From: GERRY HANNAN <gerryhannan@imagine.ie>
Message-ID: <1172612424.118860.189090@a75g2000cwd.googlegroups.com>
Source record: 106968

My deep love for Irish music, in all its forms, knows absolutely no bounds. It is the very reason why I took over RADIO LIMERICK ONE after
it was abandoned by its previous owners in 2005. I had a vision and that is to promote the music of my native hometown and country to the people of the world. This is why I decided to embrace modern technology and attempt to reach further than, up until now, was possible with my dream.

A dream of having the world pay attention to the most beautiful music in the world.. But since RADIO LIMERICK ONE started its web streaming service I have realised that there is more to my dream than I first imagined. Not only is the world listening to this music but the world is playing it. The station has received music, by CD and MP3's from countries all over the world and from people who, up until now, could not get an airing at such a level as is proposed by RADIO LIMERICK ONE.

The arrival on the marketplace of WI-FI Radio now means that Internet Radio is no longer the preserve of the elite computer owner, but has brought radio back where it belongs, wireless radio in the bedrooms, the kitchens, the living rooms and the workplace. "We have come full circle and these are exciting times for those who love radio. We can become more involved in radio than ever before, now we are no longer controlled by the barriers of border and frequency limitations and the
airwaves of the world has opened out to us and I want RADIO LIMERICK ONE to be a pioneer of this new technology. I want to demonstrate to the musicians who walk the walk with me to realise that the world wants to hear their music as much as I do.

Now is the time for musicians and broadcasters and listeners to unite in one clear objective and that is to embrace modern technology to promote our endevours and show the world that we exist. Lets do it!

RADIO LIMERICK ONE is an all volunteer, Irish music, labor-of-love webcasting radio station. It broadcasts on the Internet 24 hours/day, 365 days/year from a small studio in Limerick City centre, Ireland. RLO has been "on-air" for more than ten years, and "live" webcasting began in June 2005. There is not a terrestrial transmitter. In other words, you can't hear RLO on your car radio but we do broadcast on WI-
FI which has made our service available to all WI-FI Radio Owners Globally. Unlike most other webcasts, RLO is interactive. Listeners are invited to interact with each other in a chat room, choose the

music, and pop reaction posts to what they hear at any given time.

We focus on independent Irish musicians in the following genres: acoustic, folk, jazz, classical, singer-songwriter, swing, big-band, new-age, instrumental, blues, spoken word, and humor. We also air Christian, experimental-electronica, and soft rock, providing of course its Irish or the performer has an Irish connection.

Our listeners tend to be adult music aficionados and music buyers. Those who tune-in regularly are transformed into "addicted" RLO fans and become part of the family of contributors, listeners and occasional moaners!

Listeners contribute to the experience in many ways sending their own music, phoning in and chatting LIVE on air, singing their own songs and submitting their music.

If you wish to be a part of RADIO LIMERICK ONE then pop along to our site at http://www.radiolimerickone.com

Best Wishes From Ireland,
Gerry Hannan

4970. Ahmadinejad and Russian Roulette

Newsgroup: rec.radio.shortwave
Date: 2007-02-27 21:40:36 UTC

Ahmadinejad and Russian Roulette

by Amir Taheri
Asharq Alawsat

On a sunny day, its cannons shining and its colors flying high, the gunboat slips into the waterway, with awe-struck natives watching from a safe distance. In the evening, the captain entertains the native chiefs at a sumptuous banquet onboard. He shows them the cannons, and describes how their firepower can wipe a native town off the map. The chiefs absorb the implicit message, and declare readiness to do what is required to keep the cannons silent.

This is how "gunboat diplomacy" worked for decades in the 19th and 20th century. The gunboat was a medium of communication, a semiological prop, used by powerful nations to persuade weaker ones not to transcend red lines. In a sense, it was an instrument of peace insofar as it persuaded putative adversaries to moderate their defiance.

Watching a second American battle group sail into the Gulf of Oman the other day, one could not help recall the days of gunboat diplomacy. Accompanied by its flotilla of warships, the USS Dwight D Eisenhower, was sailing towards the Strait of Homuz to join its sister aircraft carrier, the USS Stennis.

What is the message that the aircraft carriers are supposed to convey?

And, to whom is it addressed?

The answer to the second question, relayed by the media ad nauseum, is clear: the American "gunboat" message is destined for the Khomeinist leadership in Tehran.

The answer to the first question, however, is less clear.

For, so far no one has clearly drawn the red lines that the "natives", in this case the Khomeinists, are required to respect.

On the one hand, US officials, including President George W Bush, claim that Tehran is arming Iraqi insurgents who kill GIs. On the other, it is implied that unless there is Perry Mason style evidence, no action would be taken against Tehran.

Then there is the controversy over Iran's alleged plans to build a nuclear arsenal. We are told that a Khomeinist regime armed with the bomb would be "intolerable". But it is never clear at what point the red line is reached.

So far, the natives, watching the gunboats' ballet on television, have reacted with a mixture of boredom and derision.

The ambiguity of the American message is not the only reason why this attempt at gunboat diplomacy might not succeed.

The Khomeinist leadership is convinced that the United States' domestic political feuds would not allow Bush to cry: fire!

The Khomeinist analysis is based on two assumptions.

First, the US is in the midst of a political civil war in which the new Democrat majority would do all it can to frustrate Bush's attempt at reshaping the Middle East. President Mahmoud Ahmadinejad praises Democrat leaders as "wise men", and counts on them to force a premature withdrawal of American troops from the region. It is assumed that those ready do all to ensure that the US is defeated in Iraq, would not help Bush restrain the mullahs.

Ahmadinejad's second assumption is that Bush is an atypical American leader who, if slapped, would not turn the other cheek. However, Bush is already a lame duck, forced to spend more energy countering domestic foes than promoting pax Americana. All that Tehran has to do is wait another year or so, in the hope that whoever succeeds Bush will be another Jimmy Carter, Bush the father, or Bill Clinton.

In the old times, gunboat diplomacy worked because the man who sent the flotilla could use it without being second-guessed at every step. The gunboat was a symbol of power that was real because those who possessed it had the will and the courage to use it. In most cases, it was not actually used because those targeted knew that it could be used.

Today, however, the US has all the power in the world but lacks the will and courage to use it.

History is full of examples of regimes that will not, indeed cannot, be restrained until they hit something hard.

These regimes resemble rebellious teen-agers caught between childhood and maturity. They are strong enough to try bullying, but not strong enough to be restrained by the weight of power. As dictatorships, such regimes lack the domestic mechanisms of restraint available in democracies.

Most such regimes, if not all, are eventually restrained and/or destroyed by war.

The Nazi regime in Germany and its sister Fascist rule in Italy are the most notorious examples, along with the militarist shogunate in Japan.

There was also the Peronist dictatorship in Argentina that saw itself as the "second superpower" after the United States. It hit something hard when it lost a mini border war against Chile, its smaller neighbor, and never recovered.

Another example was the Nasserist regime in Egypt that would not, could not, be restrained until it hit something hard, and defeated in a war that spelled its end.

Maoism was another example. Its slow death started when China suffered an ignominious defeat at the hands of the Soviets in border clashes along the Usuri in the 1960s.

In the 1980s, Libya, which had been on the rampage helping terror organisations across the globe for two decades, was eventually restrained when it lost the war, over the Aouzou strip against Chad, and was later bombarded by the Americans.

The Falklands defeat ended a generation of military rule in Argentina, because a bullying regime had hit something hard.

The Taliban regime in Kabul also lacked internal self-restraint mechanisms. In 2001, its leaders saw the firepower arrayed against them, but failed to get the message. What hit them was harder than what was necessary for restraint; it shattered their regime.

Saddam Hussein's regime was another example, perhaps the worst. Having hit something hard in its war against Iran and then in its attempt at annexing Kuwait, the Saddamite regime refused to be restrained, It had to be overthrown in a third war.

Over the past quarter of a century, the Khomeinist regime has had the prudence not to behave like suicidal adolescents. When faced with the risk of hitting something hard, it has always retreated. In 1988, Khomeini accepted a humiliating ceasefire with Iraq when he realized that the Americans would punish him if he refused. Ten years later, Khamenehi, decided to eat humble pie when the Taliban killed dozens of Iranians, including eight diplomats. He had no stomach for a fight against elements even madder than the mullahs.

The key question now is whether the Khomeinist regime, which has always played chess, has decided to play Russian roulette.

The perceived political weakness of the United States, and the expectation that the Democrats would seek a strategic retreat, may have persuaded the Khomeinist leadership that Ahmadinejad may be right after all: the Islamic Republic can pursue a hegemonic strategy with no fear of hitting something hard.

Ahmadinejad, reported to watch a lot of CNN, has seen the gunboats sail in. But he has also seen Nancy Pelosi, Jack Murtha, Barrack Obama, and other American luminaries such as Michael Moore, Noam Chomsky and Jane Fonda who would rather see Bush destroyed than the mullahs restrained. The American gunboat ballet does not impress the radicals in the ascendancy in Tehran. And that is bad news for all concerned, above all the people of the region.

I occasionally monitor aeronautical traffic on 5550 khz, but on two or three occasions today there's been an interfering signal butting in:

http://www.supload.com/sound_confirm.php?get=578011580.wav

That's gotta be annoying.

The most likely component is the audio amp (LA4550), these are quite
sensitive to reverse voltage. The rest is behind some voltage regulator
at least. Check the LA5005 output to make sure it's OK.

>
> Does the 1121 work as well on the SW was the 1103?

The 1121 is essentially a 1102 receiver wise (IFs are 10.7 MHz / 450 kHz
on shortwave, not 55.845 / 450), so it's not quite in the same league.
No idea about the filters used though.

You might want to try for them on 9680 at 0000 when they have a half hour of English to East Africa. I've not tried that myself so I don't know if it can be heard in ENA.

The 2030 broadcast on 9535 is directed to Europe.

"In-Stat: Digital Radio Set to Take Off"

"In 2006, 73 percent of respondents to an In-Stat U.S. consumer survey
were aware of HD Radio on some level."

http://beradio.com/eyeoniboc/instat-digital-radio-set/

"Sirius, XM, and HD: Consumer interest reality check" (Alexaholic)

"While interest in satellite radio is diminishing, interest in HD
shows no signs of a pulse."

http://www.hear2.com/2007/02/sirius_xm_and_h.html#comments

This just confirms, the lack of interest for HD Radio, on Google
Trends:

http://www.google.com/trends?q=%22hd+radio%22%2C+xm%2C+sirius&ctab=0&geo=all&date=all

"Rethinking AM's Future"

"Only 175 or so AM stations have even licensed AM-HD. For a number of
reasons, quite a few have tried it and taken it off the air, or so the
anecdotal evidence suggests. Ibiquity no longer reports in its public
summaries whether a station is on the air."

http://www.rwonline.com/pages/s.0044/t.557.html

For now, HD Radio/IBOC is dead.

To abolish the FCC, Congress would have to recende the Communications

Act of 1934 as amended. Then they would have to create a replacement. Do you really want a bunch of political hacks doing that? Do you?

Scroll down the middle isle at www.rense.com and you will see
something about ''Xtreme eating''.
There are at least five hundred or six hundred restaurants and fast food
chain eat joints in the Jackson metro area (guessing from the listings
in my phone book) Those kinds of joints will give you cardiac arrest in
no time,I never go to those places.There are only two old,old
restaurants in Jackson I like to go to,whenever I decide to eat out in
the Jackson area.Crechale's Restaurant on Highway 80 about two miles
East behind doggy's couch and Cherokee Inn on North State Street in
North Jackson about ten miles Northeast of doggy's couch.Crechale's is
World renown for having the best Steaks and Seafood in the World and
Cherokee Inn has the best home style cooking around here.

wrong. I studied for the code and written test. They kept me and
others out by giving required to get your ham liscence phony ham tests
in addition to the real test, claiming it was also part of the real
test, marking correct answers wrong, and then claiming that wrong
answers were the correct answers.

question "What does ATV stand for as relating to amateur radio?"

My answer: "ATV stands for amateur tv, also known as ham tv"

They marked it wrong and then told me that "the correct answer is an All-Terrain Vehhicle that is equipped with an amateur radio set. There is't any such thing as amateur tv or ham tv.

THAT IS purposely keeping people out.

If that was the case (though I doubt it), all you had to do was test elsewhere.

Personally, I think you're just a crybaby.

It's like the KA-1102, no coverage below 3 MHz, wide filter less than
9 kHz with ultimate rejection over 20db; narrow filter less than 4 kHz
with ultimate rejection over 80db. Has the NOAA weather added & you
get the warranty for $200, or you can buy from China w/no NOAA weather
& no warranty except maybe DOA exchange for $100. I think they're
overcharging us as most models just a few $ more buying here instead
of from China. You can get a KA-1102 & digital recorder for much less
also & still have warranty. Or maybe $200 for the compactness is worth
it to some. They claim the FM sensitivity is 5uv instead of the 10uv
of the KA-1102/1103. The spec for SW sensitivity is the same, 20uv.

Racism in the 21 st century: The problem of the color-line
By S. S.z

Eminent scholar, intellectual and founder of the NAACP?s The Crisis news publication, Dr. W.E.B. Dubois wrote the following statement in The Forethought of his book, ?The Souls of Black Folk? in 1903: ?Here in lie buried many things which if read with patience may show the strange meaning of being Black here in the dawning of the 20th century. This meaning is not without interest to you, gentle reader, for the problem of the 20th century is the problem of the color-line.?

Observers and analysts say that seven years into the 21st century the problem is still the ?color-line? in America.

A CNN/Opinion Research Corp. poll released in December 2006, stated that ?most Americans, White and Black, see racism as a lingering problem in the United States.? CNN also used as a consultant University of Connecticut professor Jack Dovidio, who has researched racism for 30 years, according to his website. He estimated that approximately 80 percent of White Americans have racist feelings they may not recognize.

The survey questioned 328 Blacks and 703 Whites and determined that 84 percent of Blacks and 66 percent of Whites considered racism to be a ?very serious? or ?somewhat serious? problem, and 51 percent of Blacks and 26 percent of Whites claim to have ?been a victim of discrimination.? Percentages were lower when people were asked if they knew anyone who was ?racially biased??only 31 percent of Blacks and 21 percent of Whites said they did. Only 12 percent of Blacks and 13 percent of Whites surveyed further admitted to being racially-biased themselves.

CNN?s Paula Zahn wrote on Dec. 19 that after comedian Michael Richard?s racist rant at a Los Angeles comedy club in November, she discussed with her staff ?what would possibly drive a person to say such vile and hateful things?? She said the discussions with her staff raised a series of questions: Is there an inner racist in most of us?; and, is racism thriving today? So, armed with their poll, they went throughout the nation, holding town hall meetings. According to Prof. Dovidio, the results of CNN?s poll found that ?We?ve reached a point that racism is like a virus that has mutated into a new form that we don?t recognize.?

Reaction to the CNN poll was swift. In her article on GOPUSA.com, Star Parker, president of the Coalition on Urban Renewal & Education and

author of the book ?White Ghetto: How Middle Class America Reflects Inner City Decay,? asked ?what was the point?? concerning the CNN program on racism.

?The point had to be to communicate with White America, because there certainly was no news for Blacks,? she said. ?I just couldn?t help wondering if Zahn and the CNN crew really thought any of this was prime-time worthy news,? Ms. Parker stated.

However, on Dec. 14, two days after the poll?s release, a group representing Black conservatives, Project 21, issued a press release that stated: ?The CNN report serves only one purpose, and that is to convince the public at large?specifically White people?that they are evil racists. It is a vulgar exercise to try to find racism in the fiber of every White.?

Ms. Zahn continued to raise questions concerning race. On Feb. 2, two days before Super Bowl 41, she devoted program time to the issue of Black coaches in the NFL; Blacks being tasered by police in Houston, and whether the fact that a Black celebrity may face jail-time because of a fatal car accident, when White celebrities in the same situation only faced civil charges.

The Reverend Jesse L. Jackson, Sr., founder and president of the Rainbow/PUSH Coalition; Bob Law, former national radio talk show host and New York State co-chair of the Millions More Movement; and Mychal Massie, Project 21 chairman, were queried on whether CNN was the proper vehicle for the issue of racism in America.

?CNN does not have a single show hosted by an African American,? Rev. Jackson said, throwing the issue of racism right back into CNN?s lap. On whether he felt the shows were having any particular affect on the consciousness of Blacks, he said, ?I think Black people look at these shows as just that, shows.? He said that his organization continues to put pressure on all of the networks to step up to the plate and hire more Blacks.

?We are applying pressure and opening doors,? Rev. Jackson said.

Mr. Law stated that ?We all know that racism is real, but the real discussion should be centered around the question, ?What is wrong with White folks?? Why is it necessary for them to continue to look for White advantage, after decades?no, centuries?of White privilege??

?Why is it that Whites are still racist?still using race as a tool?anything else is a bogus discussion,? Mr. Law stressed. He also added that CNN isn?t talking about anything that is real, but rather what we get from them are tricks.

CNN is promoting a racial divide and a double-standard, offered Mr. Massie. ?And the liberal media is standing by quietly,? he said. ?When I speak of credibility of a news organization, I am speaking of an organization that knows its responsibility to provide balanced news.

CNN goes out of its way to create a news environment for its own benefit, which is not to show Blacks in a positive light; always there is a stereotypical slant,? Mr. Massie said.

Meanwhile, in New York City, the Rev. Al Sharpton of the National Action Network continues to hammer home the issues of race as they impact on the lives of Blacks.

On Nov. 23, Rev. Sharpton explained to CNN why he wouldn?t accept an apology from Mr. Richards: ?This is not about accepting an apology. This is about starting a process to really deal with racism in this country.? Rev. Sharpton spoke out again when U.S. Sen. Joe Biden (D-Del.) recently referred to Illinois Sen. Barack Obama as ?articulate and clean.? Rev. Sharpton, on Feb. 4, again tackled the issue of race, when he told reporters he may seek to file a class-action lawsuit over a report from The New York Times (NYT) that the New York Police Department (NYPD) had ?stopped more than 500,000 people in 2006, more than five times as many as they did four years ago.?

The NYT reported that 55 percent of the people stopped were Black, while 30 percent were Latino. ?Is there a measure of profiling based on race that permeates in the NYPD?? Rev. Sharpton asked.

There are other reports that observers say reflect a racist trend. On Feb. 1, the federal office of Equal Employment Opportunity Commission released a report stating that federal job discrimination complaints by workers against private employers rose in 2006 for the first time in four years. Allegations of racial discrimination rose 35 percent with over 27,000 charges. ?These figures tell us that discrimination remains a persistent problem in the 21st century workplace,? stated an official of the EEOC.

On Jan. 11, Rockland County, NY students on the Ramapo High School freshman basketball team, after their game against Suffern High Scool, entered the locker room to find that a racial slur and a sketch of a Black lynching victim had been scrolled on a blackboard. According to The Journal News, some of the parents expressed outrage and demanded dialogue to address their children?s well-being. ?Racism is present in Rockland County,? a mother told the newspaper.

However, around the nation, there are some who are using diverse vehicles to deal with the issue of racism in America, or at least get some dialogue started.

In Oakland, Calif., actor/comic/writer/radio host David Lacy uses humor to talk about serious racial issues in his one-man-show entitled Colorstruck. which runs through the second week of February at Laney College, while at the University of Arizona, those who stay in the dorms were greeted Jan. 31 with signs that read ?White People Only? and ?Colored People Only,? as an experiment conducted by the school. The students were invited to a dinner to discuss their thoughts about

the signs and racism in general. ?It was really to provoke a discussion around racism?racism isn?t a topic students want to talk about,? the assistant director of residential education, responsible for the experiment, told the Arizona Daily Star.

Nope. If you tried to take the test in the neighboring counties where
you didn't live, they would refer you back to your local county.
>
> Personally, I think you're just a crybaby.

Nope. I'm not crying about it and never have. Just getting the truth
out.

I've been quiet about it for over twenty years. It's about time that
the truth about them finally comes out to the public.

However, with the CW requirement now eliminated, I'm sure enough good
people will finally get into ham radio and be able to keep an eye on
those old bozo hams (who did pass the cw test since it was required
back then).

I first mentioned the RS portable here & reports were not too good.

I guess if you wanted something that would blow away your 7600GR (and SRIII) for AM BCB DX you might need to invest $125 in the Kaito KA-2100. One DXer (in S Afr I think) said it gets AM BCB stations thousands of miles away with the built-in antenna. Full sized portable with long ferrite rod & big speaker, PLL synthesizer tunes in 1 kHz steps, bass & treble controls, narrow selectivity 4.25 kHz.

The FM tunes in 10 kHz steps & is said to not overload on FM with IF rejection of over 100dB. Has maybe around 20 db adjacent channel selectivity on FM, so it beats the SRIII & 7600GR there, too. But the SW has some problems with mixing products, correctable with purchase of tuned antenna or antenna tuner.

I don't have one, though, as my Eton E1 seems the ultimate & has got me AM BCB DX from Europe, Africa & Middle East, using it with a loop antenna. But it is $500 new and about $350 used. 73, George S.,

My 1103 quit working a couple days ago as I was changing out batteries. I don't know if the radio accidently was turned on while changing the batteries. I hit the reset button but nothing happened. Does anyone know if this radio is repairable? If it is, please let me know where. I really enjoyed listen to this radio.

TIA

George,
Thanks for sharing some interesting info about the KA-2100 and E1. I
understand Eton plans to release the Grundig G1, which is an E1 minus
the XM, later in the year. No price yet, but it should probably sell
for $400 or so.

5021. Need Help - Memory Preset Problem with DT-200VX or DT220V - Thanks

Newsgroup: rec.radio.shortwave
Date: 2007-02-28 05:53:23 UTC
From: Rick F <rfulton@aohell.com>
Message-ID: <456au2ldgh3578u44k87qu0vh3htkhd4fi@4ax.com>
Source record: 107021

Hi,

I just purchased a Sangean DT-200VX from C. Crane and am very very pleased with its performance and features. Nicely done! I really like it a lot but I have a bit of a dallima.

Having set up a number of stations in various memory locations, I realize now that there are a couple of presets I need to erase. I know it is possible to overwrite a preset with a new station but I don't have a new stations to replace the presets I want to get rid of and don't want to keep wading thru unwanted presets unnecessarily. So how can I erase or remove a entry (station) from a particular preset location?

Worst case I could live with wiping out all memory presets (not what I want to do) and then start over. However, I took the batteries out of the radio for over 12 hours and it still kept all the presets nicely in place. Only the clock went screwy.

So anybody know how to wipe out (erase) presets on a DT-200VX or maybe a DT-200V?

Thanks in advance for your help.

Rick

Try taking the batterries OUT and then putting them IN after 10 min. or so. Make sure you get the polarities correct, and hopefully the batteries are OK. Sometimes a new one is a dud. K35454.

I forget the whens and the wheres.Not too far back,the sekert service Dudes let somebody mingle with some of bush's entourge at an Airport,the sekert service wasen't quite doing their job that time.Another time,one of those sekert service Dudes walked off and he forgot to take the ''Football'' with him,he doubled back and went to get the ''Football''. If that doesn't PROVE they are Numbskulls,I don't know what does!

Sangean "Pocket" Radios
http://sangean.com/category.php?category_ID=2

Sangean DT-200VX "Pocket" Radio
http://sangean.com/product.php?model=DT-200VX
DT-200VX "Pocket" Radio Features :
PLL Synthesized tuning system.
Built-in speaker.
Built-in clock.
* 19 Random Pre-Sets.
90 minute auto shutoff.
Battery power indicator.

Stereo / Mono / Speaker Switch.
My Favorite Selection.
Deep Bass Boost.
Removable Belt Clip.
Auto-seek station.

IMHO - Unless it has a USB Jack to allow Programming
of the Station Pre-Sets : Then the simplist method is to
Re-Stack-the-Deck by taking the next higher Pre-Set
[Station] and Copying it down to {Over} the un-needed
Pre-Set [Station] to compress the number of used
Pre-Sets from 19 to what ever. With only 19 Random
Pre-Sets - it ain't a lot of work ~ RHF

For the un-used Pre-Sets there is always 530 kHz
as the starting point of the AM/MW Radio Band and
87.5 MHz as the starting point of the FM Radio Band.

TIP - Write Down what you have set into the Radio
before you begin this next series of Re-Pre-Setting
Radio Stations back into your Radio. A Paper Copy
is always a good Audit Trail of What-You-Did and
answers the question How-Did-I-Get-Here-? some
time in the future.

Sangean DT-200VX "Pocket" Radio - Owner's Manual
http://www.sangean.com/downloads/manuals/DT-200VX_MAN.pdf
Page # 10 "Setting Memory"
· Turn radio on using the On/Off button located on
the top of the radio.
· Select desired band by pressing the "Band"
selector on the front of the unit.
· Tune to desired station using either Manual Step
Tuning or Scan Tuning options.
· Press Memory Button located on the front of
radio unit and use the tuning controls (Up/Down)
to reach memory position as indicated in the top-right
of the display.
· Press Memory Button located on the front of the unit
to lock station into memory.
-HEY- YOU ARE RIGHT NO "DELETE" THE
PRE-SET PROCEDURE IN THE MANUAL.

yes it is that simple ~ RHF

ph:

Since 1995 the hand writing on the wall spelled out the doom of CW.

However, the sheer momentum which was built up by the dyed-in-wool
hardcore CW'ers carried it on. Time and time again resurrected it from
its' tomb and breathed life anew in CWs' brittle bones.

The arrl, being the professional politicians (or, as I like to refer to
ALL politicians--public butt lickers) they are, make the proper noises
and finally let lose the grip they had on the dead and bony fingers of
CW. However, don't be fooled. They only do so because even they have
woken to the fact there will be no resurrecting CW another time and do
not wish their true motives to be seen in the light of day. Now they
seek to shore up the old and ancient myths and class systems which has
made amateur radio a good ole boys club and placed it under their control.

Beware, the future will only bring more stealth, deception and
disinformation from the arrl as they seek to maintain the status quo on
what is left of their control freak, class system and good ole boys club
which they have established for amateur radio. They need to have their
dead old fingers pried from its' death grip they maintain on amateur radio.

Has it got a reset thingy,or push buttons? Remove the batteries and push all the buttons about three or four times,operate whatever else that might be on the radio,knobs and such like,leave the batteries out for a day or so.I don't know if that will help,but it might.Don't mix older batteries with new ones.Use new batteries from the same package they may come packaged in.

If that's the case, you only had to file a complaint. You clearly
didn't take your test with an FCC examiner. More likely a VE, or at an
ARRL event, or hamfest.

FCC takes testing irregularities seriously. What your suggesting,
here, is a crime. If taken with an FCC examiner, your experience would
have been highly public, at a testing event, and there would be many
witnesses. Witnesses to not only support your claim but to file
complaints of their own. FCC examiners at the event would have been
summarily terminated. And you'd be permitted to retest again. At no cost
to you.

If you took your test with a VE, at a hamfest, a single complaint
can get a VE summarily decertified while the merit of your complaint is
evaluated. Again, there would be witnesses, and supporting complaints.
And you would have been redirected to another VE for retesting.

That said, your complaint, here, is quite difficult to swallow.
First of all, all government issued tests, and that includes FCC and

even FAA tests, which should give us all pause, are required to publish and maike available both the pool of questions AND their answers to anyone interested in testing. Non published questions are NOT permitted on the tests. This has the force of law. That means your phoney ham tests is an allegation of a criminal act. Believe me when I tell you, anyone observing this would raise holy hell if anyone were turned away based on a 'phoney' test. In this litigious society, the lawsuits would far outlive your interest in amateur radio.

And finally, there has been amateur TV since before there was TV. If you have really studied your theory and legal elements, you would know that a portion of many of the bands are set aside for slow-scan TV on HF and fast scan TV VHF and above. There IS amateur TV. And any study materials you'd have access to would include it.

So your story is false on its face. And you've neither studied code in earnest (outside of the Cub Scout and Boy Scout merit badges) nor any of the elements.

And one other thing...if you really expect us to believe your complaint, it may be useful to not go to such lengths to remain anonymous. Many, here, use handles and nicknames, we've come to correspond with them privately, many have done business with some of them, bought and sold radios, shared schematics...You're clearly not willing to participate in any of that. And as such seem to be only about the bitch, and not about the hobby, as your absurd anecdote attests.

If you'd like to try again, and if you're genuinely interested in pursuing amateur radio, try being more of a participant. And a little more genuine. You'll find that amateurs, as a whole, are a pretty inclusive bunch. And any obstacles you face will be non-issues in the wake of the juggernaut of knowledge and experience that will come your way.

p

5044. Sony ICF-SW30 - No AM

Newsgroup: rec.radio.shortwave
Date: 2007-02-28 18:57:29 UTC

I know it's old but my ICF-SW30 lost it's AM and I was wondering if anyone had a suggested fix.

One day I turned it on and got nothing but light static on the AM band. EVERYTHING else works just fine - clock, alarms, sleep timer, FM, and all the SW bands.

I took it apart and reseated the few connections there are. I've also reset it. Right now I have the batteries out and am waiting 3-4 hours before resetting again (based on another post for a different radio).

Any ideas?

Sounds like something in the MW frontend went belly up. You may be aware that the rx is single conversion on MW but dual conversion on SW. If there were weak reception of at least strong locals, I'd suspect a blown RF amp, but this way I'd guess the mixer is blown, or something less likely like a disconnected antenna coil or failed tuning voltage connection (or whatever). Unfortunately I don't have service docs for this set. Ironically MW is the only band that has decent performance while not being a pain to tune.

Not too shabby. Interestingly my experience with the RP2000 has been
that it has higher noise than it should, maybe leakage from the ï¿½P
board. Doesn't speak for the SRIII's alignment. BTW, just this weekend I
got to try my first DIY AM loop (37x37", 9 windings in ~1 cm distance,
500pF). Now *that's* what I call a booster. I've had some issues with
man-made noise that tended to disturb weak signals, but I bet in a
low-noise location a portable would grow really BIG ears. Oh, and
overload is also possible. Haven't checked with the '7030, the coupling
loop should be rewound with less fat wire first, but I guess it'll need
this kind of antenna for decent daytime MW performance.

Stephan, currently playing with the recently acquired Panasonic RF-1410L
(up to par with the ICF-7600A as far as MW sensitivity is concerned,
good FM, and nice sound, too, just the bandswitch is flaky and I have no
idea how to get some tuner spray onto the contacts inside the thing,
which looks quite similar to the one found in the RF-1405LBS found on
radiomuseum.org)

So you get all touchy feely and emotional eh??

Dan might pump you in the ass if your lucky......I'm not gay.....Keep looking fag and you may find happiness some day

Re: anonymous

Hey Dan,

Sorry for the rant, but I am a passionate AM DX'er, who has done much research on HD Radio/IBOC. I post, as "700WLW" on radio-info.com's HD message baord, so feel free to join in, if interested (its gets a bit emotional, at times):

http://www.radio-info.com/smf/index.php/board,194.0.html

In-Band-On-Channel (actually, In-Band-Off-Channel) causes adjacent-channel interference (especially, on the AM band, and luckily has not been authorized by the FCC for AM nighttime), and has only 50% the coverage of analog. The extra HD channels are low-bitrate digital streams, that will eventually contain commercials, and are just the same old repetitive material. HD Radio is a desperate attempt, by terrestrial radio, to save itself - instead, they need to greatly improve programming. Yes, your friend is correct, that the 35,000 is from 2004, but as I showed, with Google Trends, there is virtually no consumer interest - and, the study showed that 73% of consumers are aware of HD Radio, at some level. The HD Radio Alliance, and even Radio Shack, refuse to publish sales figures - I wonder, why. Also, those 1,200 stations broadcasting in HD, are only a small percentage of the 13,500 stations, in existence (and most are owned by Clear Channel, part of the HD Radio Alliance)- but no one is listening, or cares. If you would like to contact me, further, you can use this email - nsarejectnsareject@yahoo.com, then I can give you my email, for my ISP...

You and Dan swappin more than emails now I bet eh?

Nice catch there on just the internal antenna John.

Cuhulin, The radio is available from Kaito in California. They are a
little higher than on Ebay but if the thing breaks you got a warrenty
good here in USA. It's got a nice big sound so you can use in your
garage or in your garden too.

Stephan, Is the antenna 500pf by it's self resonant frequency, or is
the variable you are tuning it with a 500pf? I assume the latter
because I think 500 pf is a lot of capacitance. But you said the
turns are in 1 cm. Is that 1cm spacing or all 9 windings in a 1cm

space? How do you couple it to the radio?

I have a 4'x4' loop that has 10 turns in a 3" coil. I ring it with a 450pf variable. It's amazing what the thing will do.

regards,
NEO

JS, that evolved in ALL radio services from a much earlier
period. In general the experiences of and with radio
communications during World War 2 was the "Great Awakener."

>However, the sheer momentum which was built up by the dyed-in-wool
>hardcore CW'ers carried it on. Time and time again resurrected it from
>its' tomb and breathed life anew in CWs' brittle bones.

In amateur radio that may be exaggerated but true.

The built-in fact of amateur radio being basically a hobby
makes it ultra-conservative insofar as actual innovation
and experimentation is concerned. Hobbies are a pasttime
for most and thus there is less time available for
participants to either learn more, keep up with, or
actually do operating. As a result, many prefer the
"tried-and-true" methods and modes they are used to, or
feel comfortable with.

Underneath all of that amateur radio activity is the
long-term but subtle emotional influence of amateur-
radio-oriented media, namely the enormous quantity of
publications of the ARRL. The ARRL has kept the Mythos
of Morse alive for decades, decades longer than it
deserves as a communications means. The enormity of
their publications base has been in existance for so
many decades that few members are aware of their
(insidious) influence on their thinking.

>The arrl, being the professional politicians (or, as I like to refer to
>ALL politicians--public butt lickers) they are, make the proper noises
>and finally let lose the grip they had on the dead and bony fingers of
>CW. However, don't be fooled. They only do so because even they have

>not wish their true motives to be seen in the light of day. Now they
>seek to shore up the old and ancient myths and class systems which has
>made amateur radio a good ole boys club and placed it under their control.

In all fairness and logic, SURVIVAL of anything is the
most important human motivator. Politicians,
organizations, and corporations all have a basic need
to SURVIVE. They must cater to their constituency or
target market to do this.

The ARRL can be summed up as having two basic components:
A publishing house (prime) and a membership organization
(secondary). ARRL's annual reportable income exceeds the
million-dollar value by at least an order of magnitude;
they reported higher-than-ten-million dollars income to
the IRS four years ago. They could NOT have achieved that
just from annual member dues.

An oft-used argument is that the ARRL offers "so many 'free'
services." The ARRL VEC exam fees are the top of the limit
yet some of the other seven (?) VECs charge less. The ARRL
offers "help" on license renewals and paperwork to the FCC.
That is just lip-gloss since: (1) There is NO charge to any
licensed amateur at the FCC except for Vanity call
applications; (2) Paperwork handling AT the FCC for license
adminstrative matters is no more difficult to do on the
Internet OR by mail than through the ARRL (as an intermediary).

Back before the Internet went public in 1991, it was very
convenient to have the ARRL "represent all radio amateurs"
in lobbying and legal-speaking to the FCC. Most citizens
tend to shirk direct talking/communicating with their
government (although some have done so and effectively so).
Having a legal firm on retainer IN Washington, DC, is more
effective than individual citizens writing letters from
Montana, Arizona, Hawaii, or Oregon, all several time zones
away from DC and days of postal delivery away. [CT is in
the same time zone as DC and physically much closer than,
say, most-populous California] Radio amateurs tended to
prefer someone "speaking for them" so that they would have
more time to play with their radios.

Another argument of those championing the ARRL is that
they "have a democratic-principled representation" through
their own established Districts and "elections." Actually,
there are NO similarities to our federal government's
democratic principles and practices; the only similarity
is to several national fraternal orders, all private

organizations. Supposedly there is a "third-party observer" to ARRL elections, but that is NOT anything similar to the built-in Checks and Balances of the real federal government. Those federal (and local) Checks and Balances DO NOT APPLY to private membership organizations. Yet the IMPLICATION of similarity is so often done that it has become just-another-urban-myth, emotional sustenance for its membership.

The ARRL remains a MINORITY special-interest-group in US amateur radio...yet they imply (often) that they "represent all [US] amateurs." The ARRL only publishes a CLUE as to their membership totals twice a year; In the "publishers sworn statement" about QST, the member-ship magazine of the ARRL. ARRL membership is still only a quarter of all US amateur radio licensees. QST survives as a periodical on its advertisers ad purchases. QST is the major periodical target for manufacturers and service-providers of the amateur radio market. QST has a virtual (if not de facto) monopoly as an amateur radio advertising medium in the USA. Note: Three other INDEPENDENT amateur radio interest periodicals have survived for over a double decade of existance of each yet two have had to close or sell. Their incomes depended on advertising space sales. When the ad monies diminished those independents did not have the demographics to attract enough advertisers as compared to the ARRL. The number of members keeps QST demographics high, thus it serves to keep its survival intact...and serve as a free advertising medium for its OWN products and services.

>Beware, the future will only bring more stealth, deception and
>disinformation from the arrl as they seek to maintain the status quo on
>what is left of their control freak, class system and good ole boys club
>which they have established for amateur radio. They need to have their
>dead old fingers pried from its' death grip they maintain on amateur radio.

Human life expectancy will take care of that. Eventually the core membership of the ARRL and its chieftans will understand that this new millennium is NOT the same as it was in the 1930 to 1960 period when They were young (and supposedly vibrant). Times and tecnology have changed enormously yet the Mythos persist on the "necessity" to hold to the old, old standards. However, to retain their CONTROL ("they know what is good for ham radio") while they still live (and rule) they must insure that the Big Publishing House survives. That income is what gives them the perquisites and power of quasi-rule over others. They MUST acquiesce their quaint old ideas and mythos however much that hurts their psyches. WE still have time to see

the Change happening...but I am not optimistic about it.

73s,
LenAnderson@ieee.org

That's possible but unlikely. Most of what happens is that the few
people at the top of the pyramid rip off the vast majority at the
bottom of the pyramid. If one person is going to be paid by thousands
then thousands need millions to pay them, millions need billions and
billions need space aliens who are honest but too stupid figure it
out.
